CITY OF ARVADA

SUMMARY OF MINUTES OF THE MEETING OF THE ARVADA CITY COUNCIL HELD MAY 17, 2021

1. Executive Session - Third Floor Conference Room - 2:30 p.m.
   A. Personnel Matters, Pursuant to C.R.S. 24-6-402(4)(f) Relating to Appointee Evaluations

   Councilmember Miller moved to go into Executive Session for Personnel Matters, Pursuant to C.R.S. 24-6-402(4)(f) Relating to Appointee Evaluations.

   The following votes were cast on the Motion:
   Those voting Yes: Williams, Miller, Fifer, Ford, Jones, Marriott, Simpson
   The Motion was Approved

2. Call to Order - 6:00 p.m.

   In accordance with physical distancing guidelines, this Arvada City Council meeting was held in the City Council Chambers and remotely using webinar technology. Mayor Williams, Mayor Pro Tem Miller, Councilmember Fifer, Councilmember Ford, Councilmember Marriott, Councilmember Jones and Councilmember Simpson were present in the council chambers. Members of the public were given notice with instructions on how to participate with public comment.

3. Moment of Reflection and Pledge of Allegiance

4. Roll Call of Councilmembers

   Those Present: Mayor Marc Williams, Mayor Pro Tem Dot Miller, Councilmember Bob Fifer, Councilmember Nancy Ford, Councilmember David Jones, Councilmember John Marriott, Councilmember Lauren Simpson

   Also Present: Mark Deven, City Manager; Rachel Morris, City Attorney; Lorie Gillis, Deputy City Manager and Kristen Rush, City Clerk.

5. Approval of Minutes of the May 3, 2021 City Council Meeting

   The minutes stand approved.

6. Recognition and Communication
   A. Proclamation for LGBTQ Month - presented by Mayor Pro Tem Miller

   Mayor Pro Tem Miller said this proclamation designates June as LGBTQ Month in Arvada.

   Mayor Pro Tem Miller said that Lesbian, Gay, Bisexual, Transgender and Queer Pride Month (LGBTQ Pride Month) is celebrated annually in June to honor the 1969 Stonewall riots, and works to achieve equal justice and equal opportunity for lesbian, gay, bisexual, transgender, and questioning (LGBTQ)

Americans. Today, celebrations include pride parades, picnics, parties, workshops, symposia and concerts, and LGBTQ Pride Month events attract millions of participants around the world. Memorials are held during this month for those members of the community who have been lost to hate crimes or HIV/AIDS. The purpose of the commemorative month is to recognize the impact that LGBTQ individuals have had on history locally, nationally, and internationally.

Following the reading of the Proclamation, it will be sent to the National LGBTQ Task Force in Washington, D.C.

B. Proclamation for National Gun Violence Awareness Day - presented by Councilmember Simpson

Councilmember Simpson said this proclamation declares the first Friday in June to be National Gun Violence Awareness Day. It is to honor and remember all victims and survivors of gun violence and promote its reduction. The North Jeffco Moms Demand Action group will receive the proclamation.

7. Presentations

A. Arvada Urban Renewal Authority Ralston Creek Projects Update

Maureen Phair, Executive Director of the Arvada Urban Renewal Authority, said that the Arvada Urban Renewal Authority (AURA) Board of Directors asked Executive Director Maureen Phair to provide an update to the City Council regarding several projects that are in various stages of development within the Ralston Creek area. This area is generally located on the north side of W. 58th Avenue between Garrison Street and Kipling Parkway.

Ms. Phair updated council regarding the following projects within the Ralston Creek area:

- Ralston Creek Townhomes – for sale housing
- Ralston Commons Apartments – rental housing
- Ralston Commons Plaza – restaurants
- Ralston Commons Townhomes – for sale housing
- Garrison Street Paseo – vertical park
- Ralston Gardens – affordable housing
- Morgan Ralston Creek – mixed-use, commercial and rental housing
- Wee Cottages – for sale housing
- Arvada Place – rental housing
- Ralston Road Streetscape – street beautification

8. Public Comment

CITY OF ARVADA

REPORT TO CITY COUNCIL RESOLUTION

AGENDA ITEM 8.A.1.

TO: THE HONORABLE CITY COUNCIL DATE: June 14, 2021

SUBJECT: R21-080 A Resolution Authorizing Contract Amendment #2 to a State of Colorado Department of Human Services Contract By and Between the City of Arvada and the State of Colorado for the Arvada Police Department Co-Responder Program

Report in Brief

Beginning in September 2016 the Arvada Police Department (APD) has partnered with Jefferson Center for Mental Health to provide mental health co-responders.

In 2020, APD received a grant from the State of Colorado to continue and grow the Co-Responder Program. Approval of this amendment will allow APD to continue and grow the Co-Responder Program through the partnership with Jefferson Center for Mental Health for FY2022.

The Arvada team recommends that the City Council approve R21-080, A Resolution Authorizing Contract Amendment #2 to a State of Colorado Department of Human Services Contract By and Between the City of Arvada and the State of Colorado for the Arvada Police Department Co-Responder Program.

Financial Impact

Approval of this amendment will align budget grant funds with anticipated costs of growing the Co-Responder program in Arvada. No additional costs are anticipated for this program.

Background

The Arvada Police Department (APD) currently runs a Co-Responder Program that includes two co-responders to assist with mental health calls and contacts of the Arvada Police Department. These co-responders help to provide mental health resources and call taking and handling strategies. Acceptance of this amendment will allow APD to continue growing the current Co-Responder Program from two co-responders to four co-responders over the next two years. Growing this program will allow for greater reach of the co-responders and greater access to mental health information and resources for citizens of Arvada.

Discussion

Approval of the recommended action will enable the APD to double the current Co-Responder Program. Among the major goals of the co-responders are to reduce repeated calls for service involving the same individuals by providing more in-depth services, customized referrals, and follow-up case management. In addition to reducing the number of repeated calls, the co-responders' work reduces the time officers are needed on scene. The presence of the co-responders facilitates a wider array of options for behavioral health clients, which are no longer limited to emergency mental health holds. APD responds to an average of two behavioral health calls for service per day (50-70 per month) that require police intervention, with officers spending an average of approximately 20 hours per week in direct contact with individuals experiencing a behavioral health crisis.

In addition to our partnerships with the Office of Behavioral Health and Jefferson Center for Mental Health, APD partners with

the Arvada Fire Department to receive any referrals they have and to provide our co-responders and officers to them on scene whenever needed. In return, the Fire Department provides, on average, one transport per day. Ambulance transport allows the APD to avoid handcuffing and transporting individuals, in a mental health crisis, in a police car, where criminal offenders usually sit. This partnership preserves clients' dignity and maintains a medically safe environment for these high risk clients who frequently consume medications and illicit substances prior to contact with police.

The APD continues to move in a progressive direction with the Co-Responder Program, in the most customized, cost-effective framework, specifically designed for the needs of the City of Arvada. While other programs exist involving co-responders in the United States, the scope and scale of behavioral health calls for service in Arvada demand a customized approach. If approved by the City Council, the newly-expanded program will provide service coverage across the entire week, during all active behavioral health call times (currently 8 AM to 9 PM). The Arvada Police Department looks forward to continuing to provide an innovative, cost-effective, and progressive Co-Responder Program that sets the example in mid-sized, professional police departments in Colorado.

Public Contact

Posting of the City Council Agenda.

Commission Recommendation

N/A

Strategic Alignment

The recommended action aligns with the Safe Community Priority Area of the City Council Strategic Plan. Specifically, approval of the Contract Amendment that will allow the increase in the Co-Responder program supports the following within the Safe Community Priority Area:

Provides customized police services making the community feel safe and secure, including proper investigation, appropriate case filings, and crime scene investigation, resulting in an increased likelihood of identifying and prosecuting those responsible for committing crimes.

Alternative Courses of Action

N/A

Recommendation for Action

The Arvada team recommends that the City Council approve R21-080, A Resolution Authorizing Contract Amendment #2 to a State of Colorado Department of Human Services Contract By and Between the City of Arvada and the State of Colorado for the Arvada Police Department Co-Responder Program.

Suggested Motion:

I move that R21-080, A Resolution Authorizing Contract Amendment #2 to a State of Colorado Department of Human Services Contract By and Between the City of Arvada and the State of Colorado for the Arvada Police Department Co-Responder Program, be (approved) (rejected).

RESOLUTION NO. R21-080

A RESOLUTION AUTHORIZING CONTRACT AMENDMENT #2
TO A STATE OF COLORADO
DEPARTMENT OF HUMAN SERVICES CONTRACT BY AND BETWEEN
THE CITY OF ARVADA AND THE STATE OF COLORADO FOR THE ARVADA POLICE
DEPARTMENT CO-RESPONDER PROGRAM

WHEREAS, the State of Colorado ("State") and the City of Arvada ("Arvada") previously entered into a State of Colorado Department of Human Services Contract by and between the City of Arvada and the State of Colorado to provide grant funding in the amount of $477,867.00 for the Arvada Police Department Co-Responder Program, dated April 10, 2020 ("Co-Responder Agreement"); and

WHEREAS, State and Arvada previously agreed to add and replace certain exhibits to the Co-Responder Agreement in Amendment #1; and

WHEREAS, State and Arvada have agreed to certain additional amendments which update exhibits A-1, B-1, C-2, and D-1 to the Co-Responder Agreement to reflect current budgets, statements of work, and miscellaneous provisions; and

WHEREAS, it is to the mutual benefit of the State and Arvada, and the residents of each, to continue the Co-Responder Agreement as amended.

BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF ARVADA, COLORADO:

Section 1. The Mayor or Mayor Pro Tem is authorized to sign and the City Clerk to attest, in form approved by the City Attorney, Contract Amendment #2 to the State of Colorado Department of Human Services Contract by and between the City of Arvada and the State of Colorado to provide grant funding to the City for the Arvada Police Department Co-Responder Program, which is in substantially the same form as that attached hereto.

Section 2. This resolution shall be effective upon its approval by the City Council.

APPROVED AND ADOPTED this 14th day of June, 2021.

By: _____
Andrea Eurich / Janet Miks / Toni Williamson

Amendment Effective Date: _____

1. PARTIES

This Amendment (the "Amendment") to the Original Contract shown on the Signature and Cover Page for this Amendment (the "Contract") is entered into by and between the Contractor, and the State.

2. TERMINOLOGY

Except as specifically modified by this Amendment, all terms used in this Amendment that are defined in the Contract shall be construed and interpreted in accordance with the Contract.

3. AMENDMENT EFFECTIVE DATE AND TERM

A. Amendment Effective Date

This Amendment shall not be valid or enforceable until the Amendment Effective Date shown on the Signature and Cover Page for this Amendment. The State shall not be bound by any provision of this Amendment before that Amendment Effective Date, and shall have no obligation to pay Contractor for any Work performed or expense incurred under this Amendment either before or after of the Amendment term shown in **§3.B** of this Amendment.

B. Amendment Term

The Parties' respective performances under this Amendment and the changes to the Contract contained herein shall commence on the Amendment Effective Date shown on the Signature and Cover Page for this Amendment or July 1, 2021, whichever is later and shall terminate on the termination of the Contract.

4. PURPOSE

Under the original contract the Contractor has implemented a Co-Responder Program for its community by collaborating with key stakeholder partners.

The purpose of this contract amendment is to update and replace the following exhibits with the most current versions for Fiscal Year 2022 contract extension and renewal: Exhibit A, Statement of Work; Exhibit B, Budget, Exhibit C-1, Miscellaneous Provisions and Exhibit D, HIPAA BAA/QSOA.

5. MODIFICATIONS

The Contract and all prior amendments thereto, if any, are modified as follows:

A. The Contract Initial Contract Expiration Date on the Contract's Signature and Cover Page is hereby deleted and replaced with the Current Contract Expiration Date shown on the Signature and Cover Page for this Amendment.

B. The Contract Maximum Amount table on the Contract's Signature and Cover Page is hereby deleted and replaced with the Current Contract Maximum Amount table shown on the Signature and Cover Page for this Amendment.

C. REPLACE Exhibit A, Statement of Work with Exhibit A-1, Statement of Work, attached hereto and incorporated herein by reference.

D. REPLACE Exhibit B, Budget with Exhibit B-1, Budget, attached hereto and incorporated herein by reference.

E. REPLACE Exhibit C-1, Miscellaneous Provisions, with Exhibit C-2, Miscellaneous Provisions, attached hereto and incorporated herein by reference.

F. REPLACE Exhibit D, HIPAA BAA/QSOA, with Exhibit D-1, HIPAA Business Associate/42 Part 2 Qualified Service Organization Agreement, attached hereto and incorporated herein by reference.

6. LIMITS OF EFFECT AND ORDER OF PRECEDENCE

This Amendment is incorporated by reference into the Contract, and the Contract and all prior amendments or other modifications to the Contract, if any, remain in full force and effect except as specifically modified in this Amendment. Except for the Special Provisions contained in the Contract, in the event of any conflict, inconsistency, variance, or contradiction between the provisions of this Amendment and any of the provisions of the Contract or any prior modification to the Contract, the provisions of this Amendment shall in all respects supersede, govern, and control. The provisions of this Amendment shall only supersede, govern, and control over the Special Provisions contained in the Contract to the extent that this Amendment specifically modifies those Special Provisions.

Exhibit A-1
Co-Responder Services Program
Statement of Work

I. Goal/Purpose

The Co-Responder Model was developed to provide effective responses to police calls for service that involve people with behavioral health needs, to better link those individuals to appropriate services and to divert individuals from unnecessary legal system involvement and/or hospitalization, by creating partnerships between law enforcement and behavioral health professionals. Colorado is following this model that identifies calls for service where behavioral health (mental health and/or substance use) appears to be a relevant factor. Behavioral health co-responders shall be dispatched along with law enforcement or may provide a joint secondary response on these calls. The behavioral health provider shall offer assessment and crisis intervention services at the scene, provide referral information to the individual, and provide follow-up, when necessary.

The goals of the Co-Responder Services Program ("Program") are to:

1. Prevent unnecessary legal system involvement, incarceration and/or hospitalization of individuals with behavioral health needs;
2. Provide alternate care in the least restrictive environment through a coordinated system-wide approach;
3. Prevent unnecessary duplication of behavioral health services; and
4. Facilitate the return of law enforcement units to patrol activities.

II. Objective

The Contractor shall implement the Program for its community by collaborating with key stakeholder partners to ensure service delivery, training and resource coordination. The Contractor shall collect data, measure outcomes, and report Program outcomes to the State to assist in determining the effectiveness of the Program in diverting individuals with behavioral health needs from the criminal justice system.

III. Activities/Services

A. **Start-up Period for New Project Development:** The Contractor shall establish all required Program partnerships and finalize all required contracts needed to begin its Program operations within three (3) months from the Contract Performance Beginning Date (the Start-Up Period). If the Contractor is unable to implement the Program by the end of the Start-up Period, the Contractor will be placed on a Performance Improvement Plan established in coordination with the Office of Behavioral Health (OBH).

B. **Revised Work Plan:** The Contractor shall provide OBH with an updated Work Plan on at least an annual basis for review and approval.

C. **Steering Committee:**

1. The Contractor shall develop and maintain a Steering Committee to oversee the implementation and ongoing development of the Program for the duration of the Contract term. The Steering Committee shall meet at least biannually to discuss, problem-solve and/or guide any changes or issues around the implementation and ongoing development of the Program. The Steering Committee shall include high-level,

decision-making representatives from each of the key local stakeholder disciplines listed below:

a. Lead law enforcement agency representative;
b. Behavioral health service provider representative;
c. Impacted individual/consumer or family member;
d. Local hospital representative; and
e. Regional Crisis Services Administrative Services Organization Representative.

2. Contractor shall also include other entities in the Steering Committee that it determines are integral to the success of the Program, such as prosecutors, jail administrators, advocacy groups, and harm reduction organizations.
3. The Steering Committee shall be charged with the following:
    a. Initial examination of the nature of the problem and help determine the Program's objectives and design;
    b. Consider how the Program relates to other local criminal justice–behavioral health partnerships that may be in place or are in the process of being established;
    c. Support a forum for planning decisions during the implementation phase and to provide ongoing leadership, problem-solving and design modifications throughout the life of the Program;
    d. Designate appropriate staff to make up a Program Coordination Group;
    e. Identify Program barriers to success and help reduce the impacts of barriers on the Program (such as identification of facilities as stated in Section H.4. below); and
    f. Develop procedures to ensure that essential information is shared in an appropriate manner as stated in Section H.6. below.

D. **Program Coordination Group:**
1. The Contractor shall develop and maintain a Program Coordination Group to guide and support the Program operations. This Group may be the same as the Steering Committee, if the creation of two separate groups is unrealistic due to workforce and/or resource limitations. The Program Coordination Group shall:
    a. Oversee officer and Program training implementation;
    b. Measure the Program's progress toward achieving stated goals;
    c. Resolve ongoing challenges to the Program's effectiveness; and
    d. Inform agency leaders and other policymakers of Program costs, developments, and progress.
2. The Contractor shall designate a law enforcement Program Champion within each partnering law enforcement agency to serve as the agency's representative on the Program Coordination Group.

E. **Program/Project Manager:** The Contractor shall select a Program/Project Manager (Manager) and establish the Manager's role, responsibilities, and authority that includes support of the Steering Committee and the Program Coordination Group. The Contractor shall communicate via email to OBH any changes to the Manager's contact information within one business day of change.

F. **Partnership Agreements:** The Contractor shall develop partnership agreements to address any key challenges inherent in multidisciplinary collaboration. Partnership agreements shall include a description of how partners collectively identified the need for the project, and individualized letters of support outlining each partner's level of participation and commitment in the Program, responsibilities to the Program (policy and/or operational), resources they will contribute, and processes in collecting and sharing data. CDHS and/or OBH do not, however, direct the Contractor (or any other party) to, or give the Contractor (or any other party) authority to, negotiate or enter into any agreements on behalf of CDHS or OBH.

G. **Data Sharing Agreements:** The Contractor shall ensure a data-sharing Business Associates Agreement is developed and put in place between the partner agencies. The data-sharing agreement shall ensure that each partner agency complies with the terms of the HIPAA BAA attached to this Contract.

H. **Program Policies and Procedures:** The Contractor shall develop and maintain Program policies and procedures, subject to OBH review and approval, including specific policies and procedures for the following aspects of the Program:

1. Target Population and Eligibility Criteria: The Contractor shall identify the target population, develop eligibility criteria and develop Program policies to identify individuals who will be referred to the Program. The Contractor shall ensure that the referrals include adults at risk for low-level controlled substance-related offenses and misdemeanor crimes all of whom have been repeatedly involved with law enforcement. The Contractor may expand eligibility criteria to meet specific community needs.
2. Call Taker and Dispatcher: The Contractor shall develop policies and procedures for call takers and dispatchers, including, but not limited to, the call information call takers shall gather, the manner in which dispatchers will be provided with up-to-date information on staffing patterns during shifts, and the geographic areas that identify law enforcement and behavioral health co-responders designated to respond to calls.
3. Stabilization, Observation and Disposition: The Contractor shall develop policies and procedures to help guide co-responder teams (officers and/or behavioral health co-responders) to resolve an encounter with the least restrictive environment for the call's circumstances.
4. Transportation and Custodial Transfer: The Contractor shall develop policies and procedures to help guide effective and efficient transportation and custodial transfers. The policies shall at a minimum:
    a. Identify facilities that are capable of assuming custodial responsibility, available at all times, have personnel qualified to conduct a behavioral health evaluation, and do not turn away people brought by law enforcement, without specific reasons.
    b. Connect individuals with a friend or family member, a peer support group, or crisis center, when available and in noncustodial situations in which the person does not meet the criteria for emergency evaluation and is not under arrest, but officers or the team determine the individual would benefit from services and support.
    c. Engage the services of the individual's current behavioral health provider or a crisis team.
5. Critical Incident Policy: Contractor shall develop and maintain a policy for review of critical incidents (including death, physical assault and sexual assault) ("Critical Incidents") that occur during a Program intervention or response.

6. The Contractor shall submit a draft copy of each of the policies and procedures required under this Section III.H to OBH for review and comment, and work with OBH to resolve all comments from OBH and incorporate corresponding revisions as agreed upon with OBH in the final policies and procedures.
7. Information Exchange and Confidentiality: The Steering Committee shall develop procedures to ensure that essential information is shared in an appropriate manner. Information shall be shared in a way that protects individuals' confidentiality rights as treatment consumers and constitutional rights as possible defendants. Individuals with behavioral health disorders who have been in contact with a behavioral health agency should be offered an opportunity to provide consent in advance for behavioral health providers to share specified information with law enforcement authorities if an incident occurs (sometimes called an advance directive).

I. **Program Training and Cross-training**:
   1. State Program Meeting Requirements: The Contractor shall attend an orientation session (mandatory only during Contractor's first year under the Program), monthly Program check-in meetings with the OBH manager, and other required Program meetings and training throughout the term of the Program.
   2. Contractor Training: The Contractor shall provide training necessary for Contractor's Program to include:
      a. Officer Training: The Contractor shall provide officer training to improve officers' responses to people with behavioral health needs and to educate officers on the Program. The Contractor shall determine the amount of training necessary to ensure, at a minimum, that there is a group of officers sufficient to cover all time shifts and geographic districts.
      b. Cross-training: The Contractor shall provide opportunities to behavioral health personnel and other stakeholders to help improve cross-system understanding of agencies' roles and responsibilities, law enforcement issues, Program policies and procedures, information sharing, safety and other opportunities to see policies translated into action.

J. **Catchment Area**: The Contractor shall define the service and/or catchment area that best meets the community's needs.

K. **Individualized Service Provision**: The Contractor's Program shall link individuals referred to or contacted by the Program to community-based behavioral health supports and services, as appropriate.

L. **The Non-Displacement of Resources:** The Contractor shall ensure the Program participants do not receive preferential access to scarce resources that would prevent others in need or on waitlists from being served.

M. **Evidence-Based Practices**: The Contractor shall use evidence-based and promising practices within the screening and service delivery structure, as appropriate, to support effective outcomes. The use of a risk/need/responsivity (RNR) model is encouraged to assess various factors such as substance use disorders, mental illness, cognitive or physical impairments, financial issues, family dynamics, housing instability, developmental disabilities, low literacy levels, and lack of reliable transportation, all of which may need to be addressed to support success.

N. **Staff Time Tracking and Invoicing:** The Contractor shall ensure expenses and staff are tracked and invoiced separately for each Program or funding stream.

O. **Use of Contract Funds**: The Contractor may use Contract Funds to support, with the approval of OBH, items including but not limited to, the following:
    1. Program personnel, project management and community engagement
    2. Temporary services and treatments necessary to stabilize a participant's condition, including necessary housing
    3. Outreach and direct service costs for services
    4. Specialized program training
    5. Dedicated law enforcement resources, including overtime required for participation in operational meetings and training
    6. Training and technical assistance from experts in the implementation of Co-Responder Services Programs in other jurisdictions
    7. Collecting and maintaining the data necessary for program evaluation

P. **Subcontractor/Partnership Termination**: In the event a partnership with a subcontractor such as a case management or service provider is terminated, the Contractor shall transition to a new partnership no later than 30 days from termination to ensure continuity of care for all participants of the Program. The Contractor shall communicate any subcontractor termination via email to the State within one Business Day.

Q. **Critical Incident Reporting**: Incidents that fall within standard police protocols and procedures (such as the use of less-lethal interventions to maintain safety) are exempt from this requirement. If a Critical Incident (including death, physical assault and sexual assault of a participant) occurs during a Co-Responder intervention or response, the Contractor shall take the action most appropriate, from the choices below:
    1. If the Contractor or subcontractor is a behavioral health agency or facility, the Contractor or subcontractor shall follow their licensing entity's critical incident protocols and policies.
    2. If the Contractor or subcontractor is not a behavioral health agency or facility and the client or participant ("Client") is known to be enrolled in services at a behavioral health agency or facility, the Contractor shall inform the service provider of the Critical Incident so that the service provider can follow their licensing entity's critical incident protocols and policies (if applicable) and for the purpose of continuity of care.
    3. For any Critical Incident involving the death of a Client, or the Client is not known to be enrolled in behavioral health services with an agency or facility, the Contractor shall share the following information with OBH via an encrypted email to cdhs_ci_obh@state.co.us, within 24 hours of the time the Critical Incident occurs:
        a. Name of participant involved;
        b. Date and time of the Critical Incident;
        c. Location of the Critical Incident;
        d. The nature of the Critical Incident;
        e. How the Critical Incident was resolved;
        f. Name[s] of staff present; and
        g. Whether the Critical Incident resulted in any physical harm to the Client or any staff.

IV. Deliverables

Activities noted below shall be emailed by the listed Due Date below to cdhs_deliverablesOBH@state.co.us unless otherwise specified.

DELIVERABLES	DATE DUE
Revised Work Plan	Due 30 days from Contract Effective Date and after that annually.
Program Policies and Procedures Document	During implementation phase: 1. Draft document due to OBH 90 days from Contract Effective Date. 2. Final document due to OBH 30 days from reviewed draft sent from OBH to Contractor. Subsequent updates to policies and procedures due to OBH within 10 days of changes.
Submit copy of partnership agreement(s)	Upon execution of partnership agreement(s)
Participate in a monthly progress status meeting with the OBH Manager of Co-Responder Services. Meetings may be in-person or via phone or video conference.	Monthly
Monthly Reporting using template provided by OBH, on current performance outcomes	Monthly - 15 days after the end of the reporting month.
Submit copy of subcontract(s)	Upon execution of subcontract(s)
Submit copy of the Steering Committee and Policy Coordination Group Member Rosters* **If Steering Committee and Policy Coordination Group members are the same, note the rationale on roster.*	60 days after contract execution and as updated

V. Performance Outcome Measures and Goals

1. Measure: Number of referrals received and responded to by Program
   Outcome Goal: Of the total number of Program referrals, 70% or more will receive a response.

2. Measure: Number of calls that do not result in arrest
   Outcome Goal: Of the total number of active Co-Responder calls, 90% or more will not result in arrest when there is no cause for mandatory arrest (at the discretion of the officer).

3. Measure: Number of interventions, services and resource linkage provided to individuals contacted by the Program
   Outcome Goal: Of the total number of individuals contacted, 70% will receive one or more intervention, service, or linkage to resources.

Exhibit C-2
Miscellaneous Provisions

I. General Provisions and Requirements

A. Finance and Data Protocols

The Contractor shall comply with the Office of Behavioral Health's (OBH) most current Finance and Data Protocols and the Behavioral Health Accounting and Auditing Guidelines, made a part of this Contract by reference.

B. Marketing and Communications

The Contractor shall comply with the following marketing and communications requirements:

1. Reports or Evaluations. All reports or evaluations funded by OBH must be reviewed by OBH staff, including program, data, and communications, over a period of no fewer than 15 business days. The Contractor may be asked to place a report or evaluation on an OBH template and the report or evaluation is required to display the OBH logo. The Contractor shall submit the finished document to OBH in its final format and as an editable Word or Google document.
2. Press Releases. All press releases about work funded by OBH must note that the work is funded by the Colorado Department of Human Services, Office of Behavioral Health. Press releases about work funded by OBH must be reviewed by OBH program and communications staff over a period of no fewer than five business days.
3. Marketing Materials. Contractor shall include the current Colorado Department of Human Services, Office of Behavioral Health logo on any marketing materials, such as brochures or fact sheets, that advertise programs funded by this Contract. Marketing materials must be approved by the Contract's assigned OBH program contract over a period of no fewer than 5 business days.
4. All Other Documents. All other documents published by the Contractor about its OBH-funded work, including presentations or website content, should mention the Colorado Department of Human Services, Office of Behavioral Health as a funder.
5. Opinion of OBH. OBH may require the Contractor to add language to documents that mention OBH reading: "The views, opinions and content expressed do not necessarily reflect the views, opinions or policies of the Colorado Department of Human Services, Office of Behavioral Health."

C. Cost of Living Adjustment - Option Letter

For contracts using State funding: The State may increase or decrease the rates established in the Contract in **Exhibit B, "Budget**," based upon a cost of living adjustment to the relevant lines in the Long Bill through an option letter. In order to exercise this option, the State shall provide written notice to Contractor in a form substantially equivalent to Contract Section 21, **"Sample Option Letter."** Delivery of Goods and performance of Services shall continue at

the same rates and terms as described in this Contract.

D. Start-up Costs
If the State reimburses the Contractor for any start-up costs and the Contractor closes the program or facility within three years of receipt of the start-up costs, the Contractor shall reimburse the State for said start-up costs within sixty (60) days of the closure. The Contractor is not required to reimburse the State for start-up costs if the facility or program closure is due to OBH eliminating funding to that specific program and/or budget line item.

E. Immediate Notification of Closures / Reductions in Force
If the Contractor intends to close a facility or program, it shall notify the OBH Contracts Unit at least five business days prior to the closure. Similarly, if the Contractor, or any sub-contractor provider, intends to conduct a reduction in force which affects a program funded through this contract, the Contractor shall notify the OBH Contracts Unit at least five business days prior to the layoffs.

F. Licensing and Designation Database Electronic Record System (LADDERS)
The Contractor shall use LADDERS (http://www.colorado.gov/ladders) as needed and/or as required by rule to submit applications for OBH licensing and designation, keep current all provider directory details, update daily bed counts (as applicable), and submit policies and procedures.

G. Contract Contact Procedure
The Contractor shall submit all requests for OBH interpretation of this Contract or for amendments to this Contract to the OBH Contract Manager.

H. The Contractor shall comply with all the provisions and requirements of RFP # 2020000049.

I. Continuity of Operations Plan

1. In the event of an emergency resulting in a disruption of normal activities, OBH may request that Contractor provide a plan describing how Contractor will ensure the execution of essential functions of the Contract, to the extent possible under the circumstances of the inciting emergency ("Continuity of Operations Plan" or "Plan").
2. OBH will set a deadline and destination email address or other contact information for a draft of the Continuity of Operations Plan at time of request. Deadline will be reasonable under the circumstances of the emergency.
3. The Continuity of Operations Plan must be specific and responsive to the circumstances of the inciting emergency.
4. OBH will provide feedback and edits to the Continuity of Operations Plan within a reasonable time frame following receipt under the circumstances of the emergency (for example, five business days where electronic communications are not disrupted).

5. OBH will present Contractor with a final Continuity of Operations Plan to Contractor for Contractor to approve in writing (hard or electronic formats). Upon Contractor's acceptance of the final Plan, Contractor may begin to operate under the terms of the Continuity of Operations Plan.
6. The Continuity of Operations Plan will not impact or change the budget or any other provisions of the contract, and Contractor's performance of the final Continuity of Operations Plan will be held to the same standards and requirements as the original Contract terms, unless otherwise specified in the Continuity of Operations Plan.
7. OBH will submit the Continuity of Operations Plan as a formal contract amendment to CDHS Contracts Management as soon as is practicable.
8. Contractor shall communicate with OBH a minimum of once weekly, in a format mutually agreed upon by OBH and Contractor staff, to monitor services under the Continuity of Operations Plan. If adjustments are needed to the Plan, Contractor and OBH shall follow the procedures in section I.1-I.5 to make the change.
    a. As part of the weekly OBH/Contractor communication, Contractor and OBH will evaluate whether the emergency situation has resolved such that normal operations may be resumed.
    b. If Contractor and OBH determine that the emergency situation is sufficiently resolved, Contractor will present a 30-day closeout procedure. Contractor and OBH shall follow the procedures in section I.1-I.5 to ratify the closeout procedure. Weekly reporting shall continue throughout the closeout period and for four weeks after termination of the Continuity of Operations Plan.
    c. OBH will submit notice of termination of the Continuity of Operations Plan as a formal contract amendment to CDHS Contracts Management as soon as is practicable.

J. Cultural Responsiveness in Service Delivery
    1. The Office of Behavioral Health expects funding dollars to support equity in access, services provided, and behavioral health outcomes among individuals of all cultures, gender identities, sexual orientations, races, and ethnicities. Accordingly, Contractors should collect and use data to: (1) identify priority populations vulnerable to health disparities (e.g., racial, ethnic, limited English speaking, tribal, sexual orientation, gender identity groups, etc.) and (2) implement strategies to decrease the disparities in access, service use, and outcomes—both within those subpopulations and in comparison to the general population.
    2. One strategy for addressing health disparities is the use of the recently revised National Standards for Culturally and Linguistically Appropriate Services in Health and Health Care (CLAS). The U.S. Department of Health and Human

Services (HHS) Think Cultural Health website (https://thinkculturalhealth.hhs.gov/) also features information, continuing education opportunities, resources, and more for health and health care professionals to learn about culturally and linguistically appropriate services, or CLAS.

3. Contractors providing direct behavioral health prevention, treatment, or recovery services shall submit one of the following two documents to cdhs_deliverables@state.co.us by August 31 annually:
    a. If a provider has completed an equity plan that identifies how they will address health equity, they can submit the plan or;
    b. Submit a completed CLAS checklist that follows this HHS format: https://thinkculturalhealth.hhs.gov/assets/pdfs/AnImplementationChecklistfortheNationalCLASStandards.pdf

II. Use of Subcontracts.

A. Services described in this Contract may be performed by Contractor or by a subcontractor, except where this Contract states explicitly that a service must not be subcontracted.
   1. Contractor shall ensure that its subcontractors perform to the terms of this Contract.

B. Any subcontract for services must include, at a minimum, the following:
   1. A description of each partner's participation
   2. Responsibilities to the program (policy and/or operational)
   3. Resources the subcontractor will contribute, reimbursement rates, services to be included and processes in collecting and sharing data and the most recent CDHS version of the HIPAA Business Associates Addendum, if this Contract contains the HIPAA Business Associates Addendum/Qualified Service Organization Addendum as an exhibit.

C. The Contractor shall provide to OBH a copy of any proposed subcontract between the Contractor and any potential provider of services to fulfill any requirements of this Contract, to cdhs_deliverablesobh@state.co.us within 30 days of subcontract execution.

D. OBH reserves the right to require Contractor to renegotiate subcontracts where necessary to adhere to the terms of this Contract.

E. Subcontractor/Partnership Termination. In the event where partnerships with a subcontractor such as a treatment provider is terminated, the Contractor shall transition to a new partnership no later than 30 days from termination to ensure continuity of care for all participants of the program.

III. Additional Remedies

A. Duty to Act in Good Faith
The Contractor shall comply with all the provisions of this contract and its amendments, if any, and shall act in good faith in the performance of the requirements of said contract. The Contractor agrees that failure to act in good faith in the performance with said requirements may result in the assessment of remedial actions, liquidated damages and/or termination of the contract in whole or in part and/or other actions by the State as allowed by law as set forth in this contract.

B. Corrective Action
The State will notify the Contractor of non-compliance and subsequently, after consultation with the Contractor, will establish a schedule for the Contractor to cure non-compliance. The Contractor shall be responsible for the submission of a plan of corrective action in accordance with said schedule. If full compliance is not achieved, or a plan of action for correction is not submitted and approved by the State within the scheduled time frame, the State may exercise remedies specified in the General Provisions "Remedies" section of this Contract. If the State determines that the Contractor continues to be out of compliance with the Contract, the State may exercise liquidated damages herein.

C. Liquidated Damages.
If an extension of time is not granted by the State, and the required performance associated with this contract is not received from the Contractor then liquidated damages of $300 a day will be assessed and may be permanently withheld from payments due to the Contractor for each day that performance is late. The parties agree that incomplete or incorrect performance shall also be cause for "late performance." The parties agree that the damages from breach of this contract are difficult to prove or estimate, and the amount of liquidated damages specified herein represents a reasonable estimation of damages that will be suffered by the State from late performance, including costs of additional inspection and oversight, and lost opportunity for additional efficiencies that would have attended on-time completion of performance. Assessment of liquidated damages shall not be exclusive of or in any way limit remedies available to the State at law or equity for Contractor breach.

IV. Audit Requirements

A. Independent Audit Requirements
1. "Independent financial audit" shall be defined as follows– a financial audit conducted by a certified public accounting firm or certified public accountant (CPA) in accordance with generally accepted accounting principles and applicable federal regulations. The CPA or firm must be independent of the Contractor. "Independent" means not a regular full-time or part-time employee of the Contractor and not receiving any form of compensation from the Contractor other than compensation that the CPA receives for the conduct of the financial audit.

2. If the Contractor or sub-contractor expends federal awards from all sources (direct or from pass-through entities) in an amount of $300,000 or more during its fiscal year shall

have an independent financial audit performed annually. The audit shall identify, examine, and report the income and expenditures specific to operation of the services described in this contract. The audit will be presented in the format specified in the "Accounting and Auditing Guidelines" for Colorado Department of Human Services, Office of Behavioral Health (OBH), found on the OBH website.

3. The Contractor agrees to comply with the qualified or disclaimer opinion rendered by the independent auditor on financial statements or the negative opinion on peer review reports. Non-compliance with these standards shall result in enforcement of remedies against the Contractor as provided in this Contract.

B. Annual Single Audit
1. If the Contractor or sub-contractor expends federal awards from all sources (direct or from pass-through entities) in an amount of $750,000 or more during its fiscal year, then the Contractor or sub-contractor shall have an audit of that fiscal year in accordance with the Single Audit Act Amendments of 1996, (31 U.S.C. 7501-7507), the provisions for which are outlined in **Exhibit E, "Supplemental Provisions for Federal Awards."**

V. Financial Requirements

A. Funding Sources
1. The Contractor shall identify all funds delivered to subcontractors as state general fund, state cash funds, or federal grant dollars in **Exhibit B, "Budget."**
2. If a Single Audit is performed in accordance with Section IV.B. above, the Contractor shall report the amount of the federal grant identified in the budget under the CFDA number identified on the first page of this Contract.
3. The Contractor shall communicate the CFDA number to all sub-contractors in their sub-contracts.

B. Budget Reallocations
1. The Contractor may reallocate funds between the budget categories of this contract, up to 10% of the total contract amount, upon written approval by OBH, without a contract amendment. Any allowable reallocation is still subject to the limitations of the Not to Exceed and the Maximum Amount Available per Fiscal Year.

C. Payment Terms
1. The Contractor shall invoice monthly for services, no later than the 20th of the month following when services are provided.
2. The Contractor shall utilize the invoice template(s) provided by OBH.
3. All payment requests shall be submitted electronically to OBHpayment@state.co.us
4. Any requests for payment received after September 10th for the prior state fiscal year cannot be processed by OBH.
5. The State will make payment on invoices within 45 days of receipt of a correct and complete invoice to OBHpayment@state.co.us. Consequently, the Contractor must have adequate solvency to pay its expenses up to 45 days after invoice submission to the State.

Division of Contracts and Procurement

EXHIBIT D-1
HIPAA BUSINESS ASSOCIATE / 42 PART 2
QUALIFIED SERVICE ORGANIZATION AGREEMENT

This HIPAA Business Associate/42 Part 2 Qualified Service Organization Agreement ("Agreement") between the State and Contractor is agreed to in connection with, and as an exhibit to, the Contract. For purposes of this Agreement, the State is referred to as "Covered Entity" and the Contractor is referred to as "Business Associate". Unless the context clearly requires a distinction between the Contract and this Agreement, all references to "Contract" shall include this Agreement.

1. PURPOSE

Covered Entity wishes to disclose information to Business Associate, which may include Protected Health Information ("PHI"). The Parties intend to protect the privacy and security of the disclosed PHI in compliance with the Health Insurance Portability and Accountability Act of 1996 ("HIPAA"), Pub. L. No. 104-191 (1996) as amended by the Health Information Technology for Economic and Clinical Health Act ("HITECH Act") enacted under the American Recovery and Reinvestment Act of 2009 ("ARRA") Pub. L. No. 111–5 (2009), implementing regulations promulgated by the U.S. Department of Health and Human Services at 45 C.F.R. Parts 160, 162 and 164 (the "HIPAA Rules") and other applicable laws, as amended. Prior to the disclosure of PHI, Covered Entity is required to enter into an agreement with Business Associate containing specific requirements as set forth in, but not limited to, Title 45, Sections 160.103, 164.502(e) and 164.504(e) of the Code of Federal Regulations ("C.F.R.") and all other applicable laws and regulations, all as may be amended.

2. DEFINITIONS

The following terms used in this Agreement shall have the same meanings as in the HIPAA Rules: Breach, Data Aggregation, Designated Record Set, Disclosure, Health Care Operations, Individual, Minimum Necessary, Notice of Privacy Practices, Protected Health Information, Required by Law, Secretary, Security Incident, Subcontractor, Unsecured Protected Health Information, and Use.

The following terms used in this Agreement shall have the meanings set forth below:

a. Business Associate. "Business Associate" shall have the same meaning as the term "business associate" at 45 C.F.R. 160.103 and, and shall refer to Contractor.

b. Covered Entity. "Covered Entity" shall have the same meaning as the term "covered entity" at 45 C.F.R. 160.103, and shall refer to the State.

c. Information Technology and Information Security. "Information Technology" and "Information Security" shall have the same meanings as the terms "information technology" and "information security", respectively, in §24-37.5-102, C.R.S.

Capitalized terms used herein and not otherwise defined herein or in the HIPAA Rules shall have the meanings ascribed to them in the Contract.

3. OBLIGATIONS AND ACTIVITIES OF BUSINESS ASSOCIATE

a. Permitted Uses and Disclosures.

i. Business Associate shall use and disclose PHI only to accomplish Business Associate's obligations under the Contract.

i. To the extent Business Associate carries out one or more of Covered Entity's obligations under Subpart E of 45 C.F.R. Part 164, Business Associate shall comply with any and all requirements of Subpart E that apply to Covered Entity in the performance of such obligation.

ii. Business Associate may disclose PHI to carry out the legal responsibilities of Business Associate, provided, that the disclosure is Required by Law or Business Associate obtains reasonable assurances from the person to whom the information is disclosed that:

A. the information will remain confidential and will be used or disclosed only as Required by Law or for the purpose for which Business Associate originally disclosed the information to that person, and;

B. the person notifies Business Associate of any Breach involving PHI of which it is aware.

iii. Business Associate may provide Data Aggregation services relating to the Health Care Operations of Covered Entity. Business Associate may de-identify any or all PHI created or received by Business Associate under this Agreement, provided the de-identification conforms to the requirements of the HIPAA Rules.

d. Minimum Necessary. Business Associate, its Subcontractors and agents, shall access, use, and disclose only the minimum amount of PHI necessary to accomplish the objectives of the Contract, in accordance with the Minimum Necessary Requirements of the HIPAA Rules including, but not limited to, 45 C.F.R. 164.502(b) and 164.514(d).

e. Impermissible Uses and Disclosures.

i. Business Associate shall not disclose the PHI of Covered Entity to another covered entity without the written authorization of Covered Entity.

ii. Business Associate shall not share, use, disclose or make available any Covered Entity PHI in any form via any medium with or to any person or entity beyond the boundaries or jurisdiction of the United States without express written authorization from Covered Entity.

f. Business Associate's Subcontractors.

i. Business Associate shall, in accordance with 45 C.F.R. 164.502(e)(1)(ii) and 164.308(b)(2), ensure that any Subcontractors who create, receive, maintain, or transmit PHI on behalf of Business Associate agree in writing to the same restrictions, conditions, and requirements that apply to Business Associate with respect to safeguarding PHI.

ii. Business Associate shall provide to Covered Entity, on Covered Entity's request, a list of Subcontractors who have entered into any such agreement with Business Associate.

iii. Business Associate shall provide to Covered Entity, on Covered Entity's request, copies of any such agreements Business Associate has entered into with Subcontractors.

g. Access to System. If Business Associate needs access to a Covered Entity Information Technology system to comply with its obligations under the Contract or this Agreement, Business Associate shall request, review, and comply with any and all policies applicable to Covered Entity regarding such system including, but not limited to, any policies promulgated by the Office of Information Technology and available at http://oit.state.co.us/about/policies.

h. Access to PHI. Business Associate shall, within ten days of receiving a written request from Covered Entity, make available PHI in a Designated Record Set to Covered Entity as necessary to satisfy Covered Entity's obligations under 45 C.F.R. 164.524.

i. Amendment of PHI.

i. Business Associate shall within ten days of receiving a written request from Covered Entity make any amendment to PHI in a Designated Record Set as directed by or agreed to by Covered Entity pursuant to 45 C.F.R. 164.526, or take other measures as necessary to satisfy Covered Entity's obligations under 45 C.F.R. 164.526.

ii. Business Associate shall promptly forward to Covered Entity any request for amendment of PHI that Business Associate receives directly from an Individual.

j. Accounting Rights. Business Associate shall, within ten days of receiving a written request from Covered Entity, maintain and make available to Covered Entity the information necessary for Covered Entity to satisfy its obligations to provide an accounting of Disclosure under 45 C.F.R. 164.528.

k. Restrictions and Confidential Communications.

i. Business Associate shall restrict the Use or Disclosure of an Individual's PHI within ten days of notice from Covered Entity of:

A. a restriction on Use or Disclosure of PHI pursuant to 45 C.F.R. 164.522; or

B. a request for confidential communication of PHI pursuant to 45 C.F.R. 164.522.

ii. Business Associate shall not respond directly to an Individual's requests to restrict the Use or Disclosure of PHI or to send all communication of PHI to an alternate address.

iii. Business Associate shall refer such requests to Covered Entity so that Covered Entity can coordinate and prepare a timely response to the requesting Individual and provide direction to Business Associate.

l. Governmental Access to Records. Business Associate shall make its facilities, internal practices, books, records, and other sources of information, including PHI, available to the Secretary for purposes of determining compliance with the HIPAA Rules in accordance with 45 C.F.R. 160.310.

m. Audit, Inspection and Enforcement.

i. Business Associate shall obtain and update at least annually a written assessment performed by an independent third party reasonably acceptable to Covered Entity, which evaluates the Information Security of the applications, infrastructure, and processes that interact with the Covered Entity data Business Associate receives, manipulates, stores and distributes. Upon request by Covered Entity, Business Associate shall provide to Covered Entity the executive summary of the assessment.

ii. Business Associate, upon the request of Covered Entity, shall fully cooperate with Covered Entity's efforts to audit Business Associate's compliance with applicable HIPAA Rules. If, through audit or inspection, Covered Entity determines that Business Associate's conduct would result in violation of the HIPAA Rules or is in violation of the Contract or this Agreement, Business Associate shall promptly remedy any such violation and shall certify completion of its remedy in writing to Covered Entity.

n. Appropriate Safeguards.

i. Business Associate shall use appropriate safeguards and comply with Subpart C of 45 C.F.R. Part 164 with respect to electronic PHI to prevent use or disclosure of PHI other than as provided in this Agreement.

ii. Business Associate shall safeguard the PHI from tampering and unauthorized disclosures.

iii. Business Associate shall maintain the confidentiality of passwords and other data required for accessing this information.

iv. Business Associate shall extend protection beyond the initial information obtained from Covered Entity to any databases or collections of PHI containing information derived from the PHI. The provisions of this section shall be in force unless PHI is de-identified in conformance to the requirements of the HIPAA Rules.

o. Safeguard During Transmission.

i. Business Associate shall use reasonable and appropriate safeguards including, without limitation, Information Security measures to ensure that all transmissions of PHI are authorized and to prevent use or disclosure of PHI other than as provided for by this Agreement.

ii. Business Associate shall not transmit PHI over the internet or any other insecure or open communication channel unless the PHI is encrypted or otherwise safeguarded with a FIPS-compliant encryption algorithm.

p. Reporting of Improper Use or Disclosure and Notification of Breach.

i. Business Associate shall, as soon as reasonably possible, but immediately after discovery of a Breach, notify Covered Entity of any use or disclosure of PHI not provided for by this Agreement, including a Breach of Unsecured Protected Health Information as such notice is

required by 45 C.F.R. 164.410 or a breach for which notice is required under §24-73-103, C.R.S.

ii. Such notice shall include the identification of each Individual whose Unsecured Protected Health Information has been, or is reasonably believed by Business Associate to have been, accessed, acquired, or disclosed during such Breach.

iii. Business Associate shall, as soon as reasonably possible, but immediately after discovery of any Security Incident that does not constitute a Breach, notify Covered Entity of such incident.

iv. Business Associate shall have the burden of demonstrating that all notifications were made as required, including evidence demonstrating the necessity of any delay.

q. Business Associate's Insurance and Notification Costs.

i. Business Associate shall bear all costs of a Breach response including, without limitation, notifications, and shall maintain insurance to cover:

A. loss of PHI data;

B. Breach notification requirements specified in HIPAA Rules and in §24-73-103, C.R.S.; and

C. claims based upon alleged violations of privacy rights through improper use or disclosure of PHI.

ii. All such policies shall meet or exceed the minimum insurance requirements of the Contract or otherwise as may be approved by Covered Entity (e.g., occurrence basis, combined single dollar limits, annual aggregate dollar limits, additional insured status, and notice of cancellation).

iii. Business Associate shall provide Covered Entity a point of contact who possesses relevant Information Security knowledge and is accessible 24 hours per day, 7 days per week to assist with incident handling.

iv. Business Associate, to the extent practicable, shall mitigate any harmful effect known to Business Associate of a Use or Disclosure of PHI by Business Associate in violation of this Agreement.

r. Subcontractors and Breaches.

i. Business Associate shall enter into a written agreement with each of its Subcontractors and agents, who create, receive, maintain, or transmit PHI on behalf of Business Associate. The agreements shall require such Subcontractors and agents to report to Business Associate any use or disclosure of PHI not provided for by this Agreement, including Security Incidents and Breaches of Unsecured Protected Health Information, on the first day such Subcontractor or agent knows or should have known of the Breach as required by 45 C.F.R. 164.410.

ii. Business Associate shall notify Covered Entity of any such report and shall provide copies of any such agreements to Covered Entity on request.

s. Data Ownership.

i. Business Associate acknowledges that Business Associate has no ownership rights with respect to the PHI.

ii. Upon request by Covered Entity, Business Associate immediately shall provide Covered Entity with any keys to decrypt information that the Business Association has encrypted and maintains in encrypted form, or shall provide such information in unencrypted usable form.

t. Retention of PHI. Except upon termination of this Agreement as provided in Section 5, below, Business Associate and its Subcontractors or agents shall retain all PHI throughout the term of this Agreement, and shall continue to maintain the accounting of disclosures required under Section 3.h, above, for a period of six years.

4. OBLIGATIONS OF COVERED ENTITY

a. Safeguards During Transmission. Covered Entity shall be responsible for using appropriate safeguards including encryption of PHI, to maintain and ensure the confidentiality, integrity, and security of PHI transmitted pursuant to this Agreement, in accordance with the standards and requirements of the HIPAA Rules.

b. Notice of Changes.

i. Covered Entity maintains a copy of its Notice of Privacy Practices on its website. Covered Entity shall provide Business Associate with any changes in, or revocation of, permission to use or disclose PHI, to the extent that it may affect Business Associate's permitted or required uses or disclosures.

ii. Covered Entity shall notify Business Associate of any restriction on the use or disclosure of PHI to which Covered Entity has agreed in accordance with 45 C.F.R. 164.522, to the extent that it may affect Business Associate's permitted use or disclosure of PHI.

5. TERMINATION

a. Breach.

i. In addition to any Contract provision regarding remedies for breach, Covered Entity shall have the right, in the event of a breach by Business Associate of any provision of this Agreement, to terminate immediately the Contract, or this Agreement, or both.

ii. Subject to any directions from Covered Entity, upon termination of the Contract, this Agreement, or both, Business Associate shall take timely, reasonable, and necessary action to protect and preserve property in the possession of Business Associate in which Covered Entity has an interest.

b. Effect of Termination.

i. Upon termination of this Agreement for any reason, Business Associate, at the option of Covered Entity, shall return or destroy all PHI that Business Associate, its agents, or its Subcontractors maintain in any form, and shall not retain any copies of such PHI.

ii. If Covered Entity directs Business Associate to destroy the PHI, Business Associate shall certify in writing to Covered Entity that such PHI has been destroyed.

iii. If Business Associate believes that returning or destroying the PHI is not feasible, Business Associate shall promptly provide Covered Entity with notice of the conditions making return or destruction infeasible. Business Associate shall continue to extend the protections of Section 3 of this Agreement to such PHI, and shall limit further use of such PHI to those purposes that make the return or destruction of such PHI infeasible.

6. INJUNCTIVE RELIEF

Covered Entity and Business Associate agree that irreparable damage would occur in the event Business Associate or any of its Subcontractors or agents use or disclosure of PHI in violation of this Agreement, the HIPAA Rules or any applicable law. Covered Entity and Business Associate further agree that money damages would not provide an adequate remedy for such Breach. Accordingly, Covered Entity and Business Associate agree that Covered Entity shall be entitled to injunctive relief, specific performance, and other equitable relief to prevent or restrain any Breach or threatened Breach of and to enforce specifically the terms and provisions of this Agreement.

7. LIMITATION OF LIABILITY

Any provision in the Contract limiting Contractor's liability shall not apply to Business Associate's liability under this Agreement, which shall not be limited.

8. DISCLAIMER

Covered Entity makes no warranty or representation that compliance by Business Associate with this Agreement or the HIPAA Rules will be adequate or satisfactory for Business Associate's own purposes. Business Associate is solely responsible for all decisions made and actions taken by Business Associate regarding the safeguarding of PHI.

9. CERTIFICATION

Covered Entity has a legal obligation under HIPAA Rules to certify as to Business Associate's Information Security practices. Covered Entity or its authorized agent or contractor shall have the right to examine Business Associate's facilities, systems, procedures, and records, at Covered Entity's expense, if Covered Entity determines that examination is necessary to certify that Business Associate's Information Security safeguards comply with the HIPAA Rules or this Agreement.

10. AMENDMENT

a. Amendment to Comply with Law. The Parties acknowledge that state and federal laws and regulations relating to data security and privacy are rapidly evolving and that amendment of this Agreement may be required to provide procedures to ensure compliance with such developments.

i. In the event of any change to state or federal laws and regulations relating to data security and privacy affecting this Agreement, the Parties shall take such action as is necessary to implement the changes to the standards and requirements of HIPAA, the HIPAA Rules and other applicable rules relating to the confidentiality, integrity, availability and security of PHI with respect to this Agreement.

ii. Business Associate shall provide to Covered Entity written assurance satisfactory to Covered Entity that Business Associate shall adequately safeguard all PHI, and obtain written assurance satisfactory to Covered Entity from Business Associate's Subcontractors and agents that they shall adequately safeguard all PHI.

iii. Upon the request of either Party, the other Party promptly shall negotiate in good faith the terms of an amendment to the Contract embodying written assurances consistent with the standards and requirements of HIPAA, the HIPAA Rules, or other applicable rules.

iv. Covered Entity may terminate this Agreement upon 30 days' prior written notice in the event that:

A. Business Associate does not promptly enter into negotiations to amend the Contract and this Agreement when requested by Covered Entity pursuant to this Section; or

B. Business Associate does not enter into an amendment to the Contract and this Agreement, which provides assurances regarding the safeguarding of PHI sufficient, in Covered Entity's sole discretion, to satisfy the standards and requirements of the HIPAA, the HIPAA Rules and applicable law.

b. Amendment of Appendix. The Appendix to this Agreement may be modified or amended by the mutual written agreement of the Parties, without amendment of this Agreement. Any modified or amended Appendix agreed to in writing by the Parties shall supersede and replace any prior version of the Appendix.

11. ASSISTANCE IN LITIGATION OR ADMINISTRATIVE PROCEEDINGS

Covered Entity shall provide written notice to Business Associate if litigation or administrative proceeding is commenced against Covered Entity, its directors, officers, or employees, based on a claimed violation by Business Associate of HIPAA, the HIPAA Rules or other laws relating to security and privacy or PHI. Upon receipt of such notice and to the extent requested by Covered Entity, Business Associate shall, and shall cause its employees, Subcontractors, or agents assisting Business Associate in the performance of its obligations under the Contract to, assist Covered Entity in the defense of such litigation or proceedings. Business Associate shall, and shall cause its employees, Subcontractor's and agents to, provide assistance, to Covered Entity, which may

include testifying as a witness at such proceedings. Business Associate or any of its employees, Subcontractors or agents shall not be required to provide such assistance if Business Associate is a named adverse party.

12. INTERPRETATION AND ORDER OF PRECEDENCE

Any ambiguity in this Agreement shall be resolved in favor of a meaning that complies and is consistent with the HIPAA Rules. In the event of an inconsistency between the Contract and this Agreement, this Agreement shall control. This Agreement supersedes and replaces any previous, separately executed HIPAA business associate agreement between the Parties.

13. SURVIVAL

Provisions of this Agreement requiring continued performance, compliance, or effect after termination shall survive termination of this contract or this agreement and shall be enforceable by Covered Entity.

APPENDIX TO HIPAA BUSINESS ASSOCIATE AGREEMENT

This Appendix ("Appendix") to the HIPAA Business Associate Agreement ("Agreement") is s an appendix to the Contract and the Agreement. For the purposes of this Appendix, defined terms shall have the meanings ascribed to them in the Agreement and the Contract.

Unless the context clearly requires a distinction between the Contract, the Agreement, and this Appendix, all references to "Contract" or "Agreement" shall include this Appendix.

1. PURPOSE

This Appendix sets forth additional terms to the Agreement. Any sub-section of this Appendix marked as "Reserved" shall be construed as setting forth no additional terms.

2. ADDITIONAL TERMS

a. Additional Permitted Uses. In addition to those purposes set forth in the Agreement, Business Associate may use PHI for the following additional purposes:

    i. Reserved.

b. Additional Permitted Disclosures. In addition to those purposes set forth in the Agreement, Business Associate may disclose PHI for the following additional purposes:

    i. Reserved.

c. Approved Subcontractors. Covered Entity agrees that the following Subcontractors or agents of Business Associate may receive PHI under the Agreement:

    i. Reserved.

d. Definition of Receipt of PHI. Business Associate's receipt of PHI under this Contract shall be deemed to occur, and Business Associate's obligations under the Agreement shall commence, as follows:

    i. Reserved.

e. Additional Restrictions on Business Associate. Business Associate agrees to comply with the following additional restrictions on Business Associate's use and disclosure of PHI under the Contract:

    i. Reserved.
    The Associate:

    Acknowledges this agreement qualifies as a Qualified Service Organization Addendum as the agreement is between a Substance Abuse Program ("Program") and a Qualified Service Organization as defined by 42 C.F.R. Part 2.

Acknowledges that in receiving, transmitting, transporting, storing, processing or otherwise dealing with any information received from the Program identifying or otherwise relating to the patient in the Program ("protected information"), it is fully bound by the provisions of the federal regulations governing the Confidentiality of Alcohol and Drug Abuse Patient Records, 42 C.F.R. Part 2. Protected information encompasses protected health information ("PHI") and references to PHI shall be understood to include protected information.

Agrees to resist any efforts in judicial proceeding to obtain access to the protected information except as expressly provided for in the regulations governing the Confidentiality of Alcohol and Drug Abuse patient Records, 42 C.F.R. Part 2.

Agrees that if the Associate enters into a contract with any agent or subcontractor, the agent or subcontractor will agree to comply with 42 C.F.R Part 2.

Agrees to ensure that any agent or subcontractor to whom the Associate provides protected information received from the Program, or creates or receives on behalf of the Program, agrees to the same restrictions and conditions that apply through this agreement to the Associate with respect to such information.

i. Agrees that redisclosure of protected information is prohibited unless permitted by 42 C.F.R. Part 2.

f. Additional Terms. Business Associate agrees to comply with the following additional terms under the Agreement.

i. Reserved.

CITY OF ARVADA

REPORT TO CITY COUNCIL RESOLUTION

AGENDA ITEM 8.A.2.

TO: THE HONORABLE CITY COUNCIL DATE: June 14, 2021

SUBJECT: R21-081 A Resolution Accepting an Annexation Petition Concerning 15812 W 64th Ave, Finding said Petition Substantially Compliant with C.R.S. 31-12-107(1), and Setting a Public Hearing for July 19, 2021, 6:15 P.M. for City Council to Determine Whether the Area Meets the Requirements of C.R.S. 31-12-104 and 105, and Is Considered Eligible for Annexation

Report in Brief

Mr. John Johnson is requesting approval of annexation, rezoning and a Comprehensive Plan amendment. The applicant is requesting that the 1.93 acre property be annexed into the City with a zoning of Residential 13 (R-13). The applicant is also requesting that the 2014 Comprehensive Plan Future Land Use map be amended from Low Density Residential (LDR) to Medium Density Residential (MDR) to accommodate the requested zoning.

The Arvada team recommends that the City Council approve R21-081, A Resolution Accepting an Annexation Petition Concerning 15812 W 64th Ave, Finding said Petition Substantially Compliant with C.R.S. 31-12-107(1), and Setting a Public Hearing for July 19, 2021, 6:15 P.M. for City Council to Determine Whether the Area Meets the Requirements of C.R.S. 31-12-104 and 105, and Is Considered Eligible for Annexation.

Financial Impact

There is no financial impact associated with the recommended action.

Background

The subject property is located on the south side of W 64th Avenue with an address of 15812 W 64th Avenue. The property is divided into two lots, a north lot (.93 acres) and a south lot (1.00 acre). The southern lot contains one single family detached residence. The northern lot is vacant except for a driveway providing access to the southern lot and a neighboring property.

Discussion

The proposed land to be annexed is within the City's planning area boundary as identified on the Comprehensive Plan Future Land Use map. However, the requested zoning of Residential 13 (R-13) is not compliant with the current Comprehensive Plan Future Land Use map designation of Low Density Residential which allows density of six units per acre. The applicant is requesting a Comprehensive Plan amendment from Low Density Residential (LDR) to Medium Density Residential (MDR). The Arvada team supports the change due to the property's proximity to a busy arterial street to the north and commercial use to the east. The applicant justifies the change as a necessity to increase the marketability of a property close to a busy arterial street.

Public Contact

The required neighborhood meeting for this project took place on August 20, 2020. The applicant, Arvada team members and approximately 14 neighbors were in attendance.

Written notice was sent 15 days prior to the meeting, a published notice was posted in the newspaper 15 days prior to the meeting, and a public hearing sign was posted 15 days prior to the meeting.

Commission Recommendation

The Planning Commission will hear this case on June 8, 2021.

Strategic Alignment

The proposed action aligns with the Community and Economic Development and Vibrant Community and Neighborhoods Priority Areas of the City Council Strategic Plan. Specifically, this proposed action supports the following Principle within the VCN Priority Area:

Improves access to quality housing that is affordable to a broad range of income levels and provides resources, housing, and neighborhood assistance services to Arvada residents, neighborhoods, property owners, and stakeholders.

Alternative Courses of Action

NA

Recommendation for Action

The Arvada team recommends that the City Council approve R21-081, A Resolution Accepting an Annexation Petition Concerning 15812 W 64th Ave, Finding said Petition Substantially Compliant With C.R.S. 31-12-107(1), and Setting a Public Hearing for July 19, 2021, 6:15 P.M. For City Council to Determine Whether the Area Meets the Requirements of C.R.S. 31-12-104 and 105, and Is Considered Eligible for Annexation.

Suggested Motion:

I move that R21-081, A Resolution Accepting an Annexation Petition Concerning 15812 W 64th Ave, Finding said Petition Substantially Compliant With C.R.S. 31-12-107(1), and Setting a Public Hearing for July 19, 2021, 6:15 P.M. For City Council to Determine Whether the Area Meets the Requirements of C.R.S. 31-12-104 and 105, and Is Considered Eligible for Annexation, be (approved) (rejected).

RESOLUTION NO. R21-081

A RESOLUTION ACCEPTING AN ANNEXATION PETITION CONCERNING 15812 W 64th AVENUE, FINDING SAID PETITION SUBSTANTIALLY COMPLIANT WITH C.R.S. 31-12-107(1), AND SETTING A PUBLIC HEARING FOR JULY 19, 2021, 6:15 P.M. FOR CITY COUNCIL TO DETERMINE WHETHER THE AREA MEETS THE REQUIREMENTS OF C.R.S. 31-12-104 AND 105, AND IS CONSIDERED ELIGIBLE FOR ANNEXATION

WHEREAS, the owner of certain property located in Jefferson County, Colorado, filed a petition for annexation with the City Clerk of the City of Arvada, Colorado (the "City"), for annexation of property more particularly described below (the "subject property"), into the City limits;

WHEREAS, having received the petition for annexation, the City Council of the City of Arvada is required under the Municipal Annexation Act of 1965, as amended, to determine whether said petition is in substantial compliance with C.R.S. Sections 31-12-107 (1), 31-12-105, 31-12-104, and if so, to follow the procedure set forth in C.R.S. Sections 31-12-108 through 111;

WHEREAS, the City Council of the City of Arvada, having examined the filings and the petition for annexation of the subject property, and being duly advised by the City planning team, finds as follows:

1. On its face, the annexation petition is in substantial compliance with C.R.S. §31-12-107(1), as the petition contains the following:

    a. An allegation that it is desirable and necessary that the area be annexed to the City of Arvada;

    b. An allegation that the requirements of§§ 31-12-104 and 31-12-105 C.R.S. exist or are met.

    c. An allegation that the signer of the petition comprises the landowners of more than 50 percent of the territory included in the area and own more than fifty percent of the area proposed to be annexed, exclusive of streets and alleys and any land owned by the annexing municipality.

    d. A request that the City of Arvada approve the annexation of the area proposed to be annexed.

    e. The signature of such landowner.

f. The mailing address of such signer.

g. The legal description of the land owned by such signer.

h. The date of signing of each signature.

i. The affidavit of the circulator of the petition stating that each signature therein is the signature of the person whose name it purports to be.

2. That the annexation petition was filed with an annexation map containing the following information, and is in substantial compliance with the Municipal Annexation Act:

a. A written legal description of the boundaries of the area proposed to be annexed;

b. A map showing the boundary of the area proposed to be annexed;

c. Within the annexation boundary map, a showing of the location of each ownership tract in unplatted land and, if part or all of the area is platted, the boundaries and the plat numbers of plots or of lots and blocks;

d. Next to the boundary of the area proposed to be annexed is drawn the contiguous boundary of the City of Arvada, and that the dimensions of the contiguous boundary are shown on the map.

3. That no signature on the petition is dated more than 180 days prior to the date of filing of the Petition for Annexation with the City Clerk of the City of Arvada, State of Colorado.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF ARVADA, COLORADO:

Section 1. That the City Council hereby makes and adopts the determinations and findings contained in the recitals set forth above, and finds that the annexation petition on its face is in substantial compliance with the requirements of C.R.S. §31-12-107(1).

Section 2. That the City Council hereby accepts the annexation petition for the following described unincorporated territory, situated in the County of Jefferson and State of Colorado, to wit:

See Exhibit A

Section 3. That a public hearing shall be held on the 19th day of July, 2021 at 6:15 p.m. at the Arvada City Hall and/or virtually for the purpose of determining and finding whether the areas

proposed to be annexed meet the applicable requirements of §§31-12-104 and 31-12-105 C.R.S. and are considered eligible for annexation.

Section 4. This resolution shall be effective five days after its approval by the City Council.

APPROVED AND ADOPTED this 14th day of June, 2021.

PETITION FOR ANNEXATION OF UNINCORPORATED TERRITORY IN THE COUNTY OF Jefferson, STATE OF COLORADO, TO THE CITY OF ARVADA, STATE OF COLORADO

TO THE MAYOR AND THE CITY COUNCIL OF THE CITY OF ARVADA, COLORADO:
The undersigned in accordance with the Municipal Annexations Act of 1965, Chapter 31, Article 12, C.R.S. 1973, as amended, hereby petitions the City Council of the City of Arvada for annexation to the City of Arvada of the following described unincorporated territory located in the County of Jefferson, State of Colorado, to wit:

LEGAL DESCRIPTION

In support of the said Petition, your Petition alleges that:

1. It is desirable and necessary that the above-described territory be annexed to the City of Arvada.
2. No less than one-sixth of the perimeter of the area proposed to be annexed is contiguous with the City of Arvada.
3. A community of interest exists between the territory proposed to be annexed and the City of Arvada.
4. The territory proposed to be annexed is urban or will be urbanized in the future.
5. The territory proposed to be annexed is integrated or is capable of being integrated with the City of Arvada.
6. No land held in identical ownership, whether consisting of one tract or parcel of real estate or two or more contiguous tracts or parcels of real estate:
    a. is divided into separate parts or parcels without the written consent of the landowner or landowners therof.
    b. comprising twenty acres or more which, together with the buildings and improvements situated thereon, has an assessed value in excess of two-hundred thousand dollars for an ad valorem tax purpose for the year preceding the annexation is included within the territory proposed to be annexed, without the written consent of the landowner or landowners thereof.
7. No annexation proceedings have been commenced by another municipality for the annexation of part or all of the area proposed herein to be annexed to Arvada.
8. Annexation of the territory proposed to be annexed will not result in detachment of area from any school district and the attachment of the same to another school district.
9. The Signer(s) of the Petition comprise(s) the landowner(s) of one hundred percent of the territory included in the area proposed to be annexed, exclusive of streets and alleys and any landowner by the annexing municipality.

Your Petitioner(s) further request(s) that the City of Arvada approve the annexation of the area proposed to be annexed.

CITY OF ARVADA

REPORT TO CITY COUNCIL RESOLUTION

AGENDA ITEM 8.A.3.

TO: THE HONORABLE CITY COUNCIL DATE: June 14, 2021

SUBJECT: R21-082 A Resolution Authorizing the Second Amendment to the Lease Agreement By and Between the City of Arvada and T-Mobile Central, LLC

Report in Brief

The current extended lease agreement between the City of Arvada and T-Mobile for an existing wireless communication site at 6530 Depew Court is set to expire on June 19, 2021. The previous lease was set to expire on June 19, 2020; however, the City Council approved a six month extension with the option to extend another six months in order to allow for ongoing lease revisions to be finalized. That new lease agreement was nearly complete when issues arose regarding the facility design on the water tank. As a result, the current lease extension is set to expire on June 19, 2021 and a second extension is requested to allow time to address the site design issues.

The Arvada team recommends that the City Council approve R21-082, A Resolution Authorizing the Second Amendment to the Lease Agreement By and Between the City of Arvada and T-Mobile Central, LLC.

Financial Impact

When the revised lease terms and the site design are finalized, revised terms and conditions will be included in a new lease that will then be presented to City Council for approval. Included in that lease will be new lease terms for the rent payments to be made by T-Mobile to the City of Arvada. Until then, the rental payments shall continue at the existing rate on a short term basis as outlined in the Second Amendment to Lease Agreement. Once a new lease is approved, the revised rent payments shall commence upon execution of the new lease. Revenue generated by these leases will continue to go into the General Fund.

Background

The City of Arvada has a water tank located at 6530 Depew Court. For many years, a number of wireless communication facilities have been approved to collocate on the tank structure. On June 20, 2005 a lease agreement was approved for T-Mobile's predecessor to utilize a portion of the City property for a period of 15 years. That lease agreement was set to terminate on June 19, 2020. T-Mobile desires to remain at this location and as a result, a new lease agreement has been in process. As noted above, the amended lease was nearly complete when design issues were identified with this water tank. As a result, the Arvada team is working with T-Mobile to evaluate the site design and more time is needed to address these concerns in the best manner possible. It is everyone's desire to finalize the site design and the lease agreement well within the next six months; however, in the event that more time may be needed, the request is for one six month extension with the option to extend another six months if need be.

Discussion

In anticipation of the extended lease termination on June 19, 2021, the City of Arvada and T-Mobile have entered into discussions of the renewal terms for a new lease agreement. The Arvada team and T-Mobile anticipate that the site design will be finalized within the next six months. Therefore, in order to allow adequate time to finalize the site design and the new lease, it has been agreed that the current lease should be extended for a six-month period at the current terms with the option to extend another six months if necessary. During this extension, the Second Amendment to the Lease Agreement shall also terminate upon the effective date of a new long-term lease agreement for this site.

It is also important to note that the Federal Communications Commission (FCC) encourages local governments to help facilitate the deployment of wireless services within communities. Local governments are expected to work in a collaborative manner with wireless providers in order to find suitable locations. The water tank has been in service as a site for the wireless communications infrastructure since 2005 and remains a desired location by T-Mobile.

Public Contact

Posting of the City Council agenda

Commission Recommendation

N/A

Strategic Alignment

The proposed action aligns with the Safe Community and Infrastructure Priority Areas of the City Council Strategic Plan. Supporting good wireless communication networks will help to ensure quality communication services thereby increasing community safety. In addition, supporting the private sector's investment in communications infrastructure networks is an important element in Arvada's future economic growth. While not specifically identified in the Strategic Plan, the wireless communications networks provide an added layer of infrastructure improvements that will provide increased opportunities for business and residents throughout the City.

SECOND AMENDMENT TO LEASE AGREEMENT

THIS SECOND AMENDMENT TO LEASE AGREEMENT ("Amendment") is made and entered into as of the ___ day of _____, 2021, between the **CITY OF ARVADA**, a Colorado home rule municipal corporation ("LANDLORD") and **T-MOBILE CENTRAL LLC**, a Delaware limited liability company ("TENANT"). LANDLORD and TENANT may be referred to individually as a "Party" or collectively as the "Parties."

RECITALS

LANDLORD and TENANT are parties to that certain Lease Agreement dated June 20, 2005 (the "Agreement"), whereby LANDLORD leases a portion of the real property ("Premises") located at 6530 Depew Court, Arvada, Colorado (the "Property") to TENANT as more specifically described in the Agreement.

T-MOBILE CENTRAL LLC, a Delaware limited liability company, is successor in interest to VOICESTREAM PCS II CORPORATION, and all references to "TENANT" are now to T-MOBILE CENTRAL LLC.

The Original Agreement terminated on June 19, 2020, and LANDLORD and TENANT agreed to amend the Agreement to extend the term of the Agreement, in order to provide sufficient time to negotiate a new lease agreement for the Premises. The parties require an additional term extension to finalize negotiations for a new Lease of the Premises. The First Amendment extended the term for 6 months with an optional additional 6 month extension. The parties agreed to both 6 month extensions and now agree to a Second Amendment with the same terms.

AGREEMENT

NOW THEREFORE, for good and valuable consideration, the receipt and sufficiency of which are acknowledged, the Parties agree as follows:

1. Effective June 20, 2021, the Agreement shall automatically be extended for one additional six (6) month term with an option to extend the term for a second period of six (6) months (the Extension Term) upon the mutual written agreement of the parties on or before December 20, 2021.

2. During the Extension Term, should the Parties agree to and approve a new long-term lease agreement for the Premises, this Agreement shall terminate upon the effective date of the new lease.

3. The TENANT'S contact information in paragraph 21 of the Agreement is hereby deleted and replaced with the following:

Tenant:
T -Mobile USA, Inc.
12920 SE 38th Street
Bellevue, WA 98006
Attn: Lease Compliance/DN03520A

4. Except as specifically modified by this Amendment, all terms and conditions of the Agreement shall remain in full force and effect. To the best of each Party's knowledge without any independent investigation, as of the date of this Amendment, neither Party is in default of the Agreement. In the event of a conflict between any term or provision of the Agreement and this Amendment, the terms and provisions of this Amendment shall control. All captions are for reference purposes only and shall not be used in the construction or interpretation of this Amendment. All capitalized terms used but not defined in this Amendment have the meanings set forth in the Agreement.

This Amendment has been executed by each Party's duly authorized representative effective as of the date first above written.

CITY OF ARVADA

REPORT TO CITY COUNCIL RESOLUTION

AGENDA ITEM 8.A.4.

TO: THE HONORABLE CITY COUNCIL DATE: June 14, 2021

SUBJECT: R21-083 A Resolution Authorizing a Construction Contract Agreement By and Between the City of Arvada and Garney Companies Inc. for 1.5 Million Gallon Water Storage Tank in an Amount Not to Exceed $3,147,000, Project 18-WA-10

Report in Brief

City Council action is requested on the attached resolution authorizing a construction contract (sample attached) with Garney Companies Incorporated, in the amount of $3,147,000. This planned new infrastructure project will provide required drinking water capacity in the distribution system serving the Northwest area of the City (Candelas area). The storage tank provides an additional 1.5 million gallons of storage for fire flow, operational, and standby needs. See attached Project Cover Sheet for project location.

The Arvada team recommends that the City Council approve R21-083, A Resolution Authorizing a Construction Contract Agreement By and Between the City of Arvada and Garney Companies Inc. for the Construction of Project 18-WA-10, 1.5 Million Gallon Water Storage Tank, in an Amount Not to Exceed $3,147,000.

Financial Impact

Financial Impact: $3,147,000
This is a one-time request for Project Construction Cost.
Fund: UT Water Collection & Storage (41), CIP No. 97578.
Funding Source: Water Tap Fees Revenues paid in association with new development.
Future Associated costs requiring Council action: (None)

Background

Bids for this project were opened at 10:30 am on April 30, 2021 and a total of three responsive bids were received. The bids are summarized as follows:

Bid	Firm	Firm Location
$3,147,000	Garney Companies Incorporated	Littleton, CO
$3,390,000	Lillard And Clark Construction Company, Inc.	Denver, CO
$3,758,331	Hydro Construction Company, Inc.	Fort Collins, CO
$3,800,000	Engineer's Estimate	

Discussion

Construction of a water storage tank is specialized work. Pre-qualification of the contractors was performed by the Arvada team in March 2021. All contractors that were pre-qualified bid on the project. The construction bids show competitive pricing and the Arvada team is confident that the Garney Companies Incorporated bid is fully responsive as the lowest bidder. Funding for this project is available in UT Water Collection & Storage (41), CIP No. 97578.

Public Contact

Posting of the City Council agenda.

Commission Recommendation

Not applicable.

Strategic Alignment

This action aligns with the Priority Area of the City Council Strategic Plan. Specifically, the recommended actions supports the following Principle within the Infrastructure Priority Area:

Provides the community with a safe, reliable, high-quality water supply, drainage system, and wastewater disposal services for full city build-out, as defined by the Comprehensive Plan.

Alternative Courses of Action

Not applicable.

Recommendation for Action

The Arvada team recommends the City Council approve R21-083, A Resolution Authorizing a Construction Contract Agreement By and Between the City of Arvada and Garney Companies Inc. for the Construction of Project 18-WA-10, 1.5 Million Gallon Water Storage Tank, in an Amount Not to Exceed $3,147,000.

Suggested Motion:

I move that R21-083, A Resolution Authorizing a Construction Contract Agreement By and Between the City of Arvada and Garney Companies Inc. for 1.5 Million Gallon Water Storage Tank in an Amount Not to Exceed $3,147,000, Project 18-WA-10, be (approved) (rejected).

RESOLUTION NO. R21-083

A RESOLUTION AUTHORIZING A CONSTRUCTION CONTRACT AGREEMENT BY AND BETWEEN THE CITY OF ARVADA AND GARNEY COMPANIES INC. FOR 1.5 MILLION GALLON WATER STORAGE TANK IN AN AMOUNT NOT TO EXCEED $3,147,000, PROJECT 18-WA-10

BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF ARVADA, COLORADO:

Section 1. The Mayor or Mayor Pro Tem is authorized to sign and the City Clerk to attest, in form approved by the City Attorney, an Agreement, which is in substantially the same form as that attached hereto, by and between the City of Arvada and Garney Companies Inc. for 1.5 Million Gallon Water Storage Tank in an amount not to exceed $3,147,000, Project 18-WA-10.

Section 2. This resolution shall be effective upon its approval by the City Council.

APPROVED AND ADOPTED this 14th day of June, 2021.

AN AGREEMENT BY AND BETWEEN THE CITY OF ARVADA AND GARNEY COMPANIES, INC. FOR CONSTRUCTION OF THE SLEEPING INDIAN WATER STORAGE TANK, PROJECT NUMBER 18-WA-10 IN AN AMOUNT NOT TO EXCEED $3,147,000.00

This Agreement made this _____day of _____, 2021, by and between the City of Arvada, a home rule municipal corporation ("Arvada" and/or "City") and Garney Companies, Inc. ("Contractor").

WITNESSETH: That for and in consideration of the covenants, promises, and payments hereinafter mentioned:

1. Contractor will commence and complete the construction of the Sleeping Indian water storage tank described in the Contract Documents relating to CSB-21-Sleeping Indian Water Storage Tank. Project No. 18-WA-10, issued April 9, 2021, ("the Work").

2. Contractor will furnish all material, supplies, tools, equipment, labor, and other services necessary for the completion of the Work.

3. Contractor will commence the work required by the Contract Documents within ten (10) calendar days after the date of Notice to Proceed.

4. Contractor will complete the work required by the Contract Documents by **August 1, 2022** unless the period for completion is extended otherwise by the Contract Documents.

5. Contractor agrees to perform all of the work described in the Contract Documents for an amount not to exceed **$3,147,000.00** for the Work.

6. The term "Contract Documents" means and includes the following:

A. Arvada's Request for construction of water storage tank, CSB-21- Sleeping Indian Water Storage Tank. Project No. 18-WA-10 ("CSB");
B. CSB Exhibits (if any);
C. CSB Addenda (if any);
D. Contractor's Response to CSB, Advertisement for Bid, Bid Proposal, Bid Schedule, Bid Bond;
E. Notice of Award;
F. Performance and Payment Bond;
G. Notice to Proceed;
H. Change Orders (if any);
I. City of Arvada Engineering Code of Standards and Specifications for the Design and Construction of Public Improvements;
J. Project special provisions prepared or issued by City of Arvada (or its Consultant if applicable);
K. Detail drawings and Bid Documents prepared or issued by City of Arvada (or its Consultant if applicable);
L. Specification Illustrations and attachments; and
M. All supplementary requirements regarding wage rates, E.E.O., affirmative action and all other Federal-State requirements as outlined in the specifications.

7. INVOICES AND COMPENSATION. Contractor will follow Bid schedule and partial payments will be made accordingly NET fifteen (15) but no later than NET thirty (30).

8. GENERAL TERMS AND CONDITIONS, SPECIAL TERMS AND CONDITIONS, INSURANCE REQUIREMENTS, PROJECT SPECIAL PROVISIONS, AND OTHER CSB REQUIREMENTS. Contractor affirms that it has read and is familiar with the Contract Documents, including but not limited to the General Terms and Conditions, Special Terms and Conditions, Insurance Requirements, Project Special Provisions, and other CSB requirements, and agrees to be bound by those terms and conditions.

9. CHANGE ORDERS. Contractor shall perform the Work as described in the Contract Documents or as amended by the mutual consent of the parties in writing. Should the parties agree in writing to a change in the scope of services, then the parties will timely execute any applicable Change Order, which will address changes in scope of services, completion date, contract amount, any applicable material modifications, and any other matters that the parties deem necessary.

10. PREFERENCES IN EMPLOYMENT OF COLORADO LABOR. To the extent that obligations and responsibilities may be established by C.R.S. § 8-17-101 *et seq.,* as amended, with respect to certain public entities and those contracting therewith as to the procurement of services:

a. Colorado labor shall be employed to perform eighty percent (80%) of the work.
b. Any waiver of this requirement must comply with C.R.S. § 8-17-101 *et seq.,* as amended.

11. PERFORMANCE MEASURES. The Performance Measures for this Agreement shall be those outlined by Arvada in Section 22 of Special Terms and Conditions for Bidders in the CSB, which are included in the Contract Documents that are exhibits to this Agreement.

12. ADDITIONAL DOCUMENTS OR ACTION. The parties agree to execute any additional documents and to take any additional action that is necessary to carry out this Agreement.

13. BINDING EFFECT. This Agreement shall inure to the benefit of, and be binding upon, the parties, their respective legal representatives, successors, heirs, and assigns; provided, however, that nothing in this paragraph shall be construed to permit the assignment of this Agreement except as otherwise expressly authorized herein.

14. PARAGRAPH CAPTIONS. The paragraph captions in this Agreement are set forth only for the convenience and reference of the parties and are not intended in any way to define, limit, or describe the scope or intent of this Agreement.

15. INTEGRATION, AMENDMENT, AND SEVERABILITY. This Agreement represents the entire agreement between the parties, and there are no oral or collateral agreements or understandings. This Agreement may be amended only by an instrument in writing signed by the parties. If any other provision of this Agreement is held invalid or unenforceable, no other provision shall be affected by such holding, and all of the remaining provisions of this Agreement shall continue in full force and effect if the essential terms and conditions of this Agreement for both parties remain valid, legal, and enforceable.

16. NOTICES. Any notice or notification required or permitted by the Agreement shall be in writing and shall be deemed to have been sufficiently given for all purposes if sent by certified mail or

registered mail, postage and fees prepaid, addressed to the party to whom such notice is to be given at the address set forth on the signature page below, or at such other address as has been previously furnished in writing, to the other party or parties. Such notice or notification shall be deemed to have been given when deposited in the United States mail.

17. BINDING AUTHORITY. Contractor represents and affirms that the signature page hereof accurately states the full legal name of Contractor (whether as a corporation, partnership, limited liability company, sole proprietorship, or other), contains all requisite signature(s) on behalf of Contractor, has been properly acknowledged by attestation, notary acknowledgment, or both, and in all other respects is effective to bind Contractor, in accordance with all applicable statutes, regulations, resolutions, rules, bylaws, agreements, or similar sources of authority or limitation. This Agreement may be executed in counterpart(s), each of which shall be deemed to be an original, and all of which, taken together, shall constitute one instrument.

IN WITNESS WHEREOF, the parties hereto have executed, or caused to be executed by their duly authorized officials, this Agreement which shall be deemed an original on the date first above written.

CITY OF ARVADA

_____

Jacqueline
Rhoades

City Engineer
8101 Ralston Road
Arvada, Colorado 80002

GENERAL TERMS AND CONDITIONS

1. **PAYMENTS TO CONSTITUTE CURRENT EXPENDITURES**. Financial obligations of the City of Arvada, if any, after the current fiscal year are contingent on funds for that purpose being appropriated, budgeted and otherwise made available by the City Council for the City of Arvada. The City of Arvada's obligations under the Agreement shall be from year to year only and shall not constitute a multiple-fiscal year direct or indirect debt or other financial obligation of the City of Arvada within the meaning of Article X, Section 20 of the Colorado Constitution.

2. **TAXES.** The City of Arvada is not subject to taxation. Contractor shall not invoice Arvada for any state, federal or local taxes whatsoever. Upon written notification by the City of Arvada, Contractor shall reimburse the City of Arvada in a timely manner for any taxes erroneously paid by the City of Arvada. The Colorado Department of Revenue, Certification of Exemption for Colorado State Sales/Use Tax account number for the City of Arvada is 98-01789-0000. An exemption certificate will be provided, where applicable, upon request.

3. **NO INDEMNIFICATION BY ARVADA.** The City of Arvada is prohibited by Article XI, Section 1, Colorado Constitution, from indemnifying anyone. Therefore, notwithstanding any provision in the response to solicitation or proposed contract, lease, escrow agreement or any other type of agreement to the contrary, the City of Arvada does not indemnify Contractor or anyone else under this Agreement.

4. INDEMNIFICATION OF CITY.

A. Contractor: Notwithstanding any provision in the response to solicitation or proposed contract, lease, escrow agreement or any other type of agreement to the contrary, Contractor agrees to investigate, defend, indemnify and hold harmless Arvada, its elected officials, officers, employees, agents, insurers, and representatives from and against any claims, costs, losses, expenses, demands, actions, or causes of action, including reasonable attorney fees and other costs and expenses of litigation, which may be asserted against or incurred by Arvada or for which Arvada may be liable, arising from the negligence, willful misconduct, or other fault of Contractor or its employees, agents, or subcontractors in performance of the Agreement. Nothing herein is intended to constitute a covenant, promise, or agreement to indemnify and hold harmless Arvada from any liability or damages directly caused by or attributable to Arvada's own negligence. Nothing herein intended to be nor may be construed as a waiver of the immunities, protections, or limitations on damages provided to Arvada by the Colorado Governmental Immunity Act, C.R.S. §§ 24-10-101 *et seq.*, as it may from time to time be amended.

(or)

B. Architect, Engineer, Surveyor Services for Public Works Construction: Contractor agrees to hold harmless and indemnify Arvada, its officers and employees, from and against any liability or any claims, suits, or actions arising out of, made, or asserted for any damage to persons or property resulting from errors, omissions or fault of Contractor in connection with the performance by Contractor of obligations under this solicitation and any subsequent Agreement with Arvada. Nothing herein is intended to constitute a covenant, promise, or agreement to indemnify and hold harmless Arvada from any liability or damages directly caused by or attributable to Arvada's own negligence. Nothing herein is intended to be nor construed as a waiver of the immunities, protections, or limitations on damages provided to Arvada by the Colorado Governmental Immunity Act, C.R.S.
§§24-10-101 *et seq.*, as it may from time to time be amended.

5. **NO OPINION OF COUNSEL LETTERS.** Pursuant to Section 8.1 of the Arvada City Charter, the City Attorney provides advice to the City Council and City Officials in matters relating to their official powers and duties, and will perform such other duties as City Council may prescribe by ordinance or resolution. The City Attorney will not issue opinion of counsel letters, memoranda or statements to third parties, including, but not limited to that any contract or lease is binding on the public entity, enforceable, etc.

6. **CONFIDENTIAL DOCUMENTS.** Contractors may designate specific pages or sections within their submission as trade secret or confidential commercial information or as otherwise protected by law ("Confidential Information"). Documents and data that are considered Confidential Information shall be clearly marked as such and separated from the rest of the solicitation submission documents. Comingling is not acceptable. The City does not favor blanket assertions of Confidential Information. Please note that blanket assertions that merely classify and/or broadly claim information is confidential are insufficient as a matter of law. *See, International Brotherhood of Electrical Workers Local 68 v. Denver Metropolitan Major League Baseball Stadium District,* 880 P.2d 160 (Colo. App. 1994). Any information that will be included in any resulting contract cannot be considered Confidential. Under no circumstances may submission pricing information be considered Confidential. In the event a formal contract is entered into with the City and a portion of the Proposal/Response carries a designation indicating the Contractor believes it is Confidential Information, then the City agrees that it will use its best efforts to forward any request for the disclosure of the Confidential Information to the Contractor. By its submission of the Proposal/Response, Contractor agrees to promptly respond to the request for disclosure with any objections and reasons therefor in accordance with the Colorado Open Records Act C.R.S. §§24-72-101*et seq.* and any other applicable law. Further, Contractor agrees to assume the obligation to defend, hold harmless, and indemnify the City in any legal proceeding that arises from non-disclosure of documents or data pursuant to the Contractor's objection.

7. **OWNERSHIP OF WORK PRODUCT.** The originals of all plans, reports, studies, data, or other materials or information relating to the Work that are produced by Contractor shall be delivered to and become the property of Arvada. Contractor may retain copies of any originals; however, no plans, reports, studies, data, or other materials or information relating to the Work shall be released to any person or entity without the prior written consent of Arvada. Nothing in this clause is intended to affect Contractor's right to use generic know-how learned in the course of providing services under the Agreement for the future benefit of the City of Arvada or others.

8. **ASSIGNMENT**. Contractor shall not assign the Agreement without the prior written consent of the City of Arvada, which will not be unreasonably withheld, conditioned, or delayed. Contractor may assign the Agreement to any successor to the business of the party by merger, consolidation, or sale of assets. No assignment shall be permitted that enlarges any duty, responsibility or obligation of the City of Arvada, or that limits, curtails, or diminishes any right or privilege of the City of Arvada without the City of Arvada's express written consent.

9. **NO THIRD PARTY BENEFICIARIES.** It is expressly understood and agreed that enforcement of the terms and conditions of the Agreement, and all rights of action relating to such enforcement, shall be strictly reserved to Arvada and Contractor and nothing contained in the Agreement shall give or allow any such claim or right of action to any other third party on the Agreement. It is the express intention of Arvada and Contractor that any person other than Arvada or Contractor receiving services or benefits under the Agreement shall be deemed to be an incidental beneficiary only.

10. **INDEPENDENT CONTRACTOR.** Contractor and Arvada hereby represent that Contractor is an independent contractor for all purposes hereunder. As such, Contractor is not covered by any worker's compensation insurance or any other insurance maintained by Arvada except as would apply to members of the general public. Contractor shall not create any indebtedness on behalf of Arvada.

11. **SUBCONTRACTING.** Contractor shall not award work to subcontractor(s) in excess of fifty percent of the total contract price without Arvada's prior written approval. Contractor shall be responsible for any failure by any subcontractor or subcontractor personnel to perform in accordance with the Agreement or to comply with any duties or obligations imposed on Contractor under the Agreement to the same extent as if such failure to perform or comply was committed by Contractor or Contractor's personnel. Contractor shall be Arvada's sole point of contact regarding the services, including with respect to payment.

12. **ILLEGAL ALIENS; PUBLIC CONTRACTS FOR SERVICES.** To the extent that obligations and responsibilities may be established by C.R.S. §§8-17.5-101 *et seq*., (as amended) (the "Act"), with respect to certain public entities and those contracting therewith as to the procurement of services:

A. Successful Vendor ("Contractor") shall not knowingly employ or contract with an illegal alien to perform work under the Agreement or enter into a contract with a subcontractor that fails to certify to Contractor that the subcontractor shall not knowingly employ or contract with an illegal alien to perform work under the Agreement. Contractor confirms the employment eligibility of all employees who are newly hired for employment to perform work under this public contract for services through participation in either the E-Verify Program or Department Program (the "Program").
B. Contractor is prohibited from using Program procedures to undertake pre-employment screening of job applicants while the Agreement is being performed.
C. If Contractor obtains actual knowledge that a subcontractor performing work under the Agreement knowingly employs or contracts with an illegal alien, Contractor shall be required to:
    (i). Notify the subcontractor and the City of Arvada within three (3) days that Contractor has actual knowledge that the subcontractor is employing or contracting with an illegal alien; and
    (ii). Terminate the subcontract with the subcontractor if within three (3) days of receiving the above notice the subcontractor does not stop employing or contracting with the illegal alien; except that Contractor shall not terminate the subcontract if during such three days the subcontractor provides information to establish that the subcontractor has not knowingly employed or contracted with an illegal alien.
D. Contractor shall comply with any reasonable request by the Colorado Department of Labor and Employment made in the course of an investigation that the department is undertaking pursuant to the authority established in the Act.
E. Any provision of the Agreement to the contrary notwithstanding, if Contractor violates any provision of this Section, the City of Arvada may terminate the Agreement, without breach or default by the City of Arvada, and Contractor shall be liable for actual and consequential damages to the City of Arvada arising out of such violation.
F. Contractor represents that, prior to executing the Agreement, Contractor has certified that at the time of the certification, Contractor does not knowingly employ or contract with an illegal alien who will perform work under this public contract for services and Contractor will participate in either the E-Verify Program or Department Program in order to confirm the employment eligibility of all employees who are newly hired for employment to perform work under this public contract for services. By execution of this Agreement, Contractor shall be deemed to have renewed such certification.
G. Contractor acknowledges its responsibility to comply with the certification requirement pursuant to C.R.S. §8-17.5-102(2)(b)(I) (as amended).

13. **NO WAIVER OF GOVERNMENTAL IMMUNITY.** Nothing contained in this or any of the exhibits attached thereto shall be construed as a waiver of any of the immunities, limitations, privileges, rights, procedures, or requirements contained in the Colorado Governmental Immunity Act, C.R.S. §§24-10-101 *et seq.*

14. **RIGHT TO TERMINATE.** The City of Arvada shall have the right to terminate, without cause, the Agreement. Any such termination shall not be considered a breach of the Agreement or any extension thereof. In the event of termination by the City of Arvada for convenience, Contractor will be paid for requested work performed up until the time of termination by the City of Arvada, not to exceed the total amount of the contract price agreed upon by the parties.

15. **COMPLIANCE WITH ALL LAWS.** All of the services performed under this Agreement by Contractor shall comply with all applicable laws, rules, regulations and codes of the United States and State of Colorado, and with the charter, ordinances, rules and regulations of the City of Arvada.

16. **WAIVER OF BREACH.** A waiver by any party to the Agreement or the breach of any term or provision of the Agreement shall not operate or be construed as a waiver of any subsequent breach by either party.

17. **GOVERNING LAW AND VENUE.** Notwithstanding any provision in the response to solicitation or proposed contract, lease, escrow agreement or any other type of agreement to the contrary, the Agreement shall be governed by the laws of the State of Colorado. Venue for any action arising under the Agreement or for the enforcement of the Agreement shall be in the appropriate court for Jefferson County, Colorado.

18. **FORCE MAJEURE.** Any delays in or failure of performance by any party of his or its obligations under the Agreement shall be excused if such delays or failure are a result of acts of God, fires, floods, strikes, labor disputes, accidents, regulations or orders of civil or military authorities, shortages of labor or materials, or other causes, similar or dissimilar, which are beyond the control of such party.

19. **BINDING ARBITRATION PROHIBITED.** The City of Arvada does not agree to binding arbitration by any extra-judicial body or person. Any provision to the contrary in response to the solicitation, or incorporated by reference, shall be null and void.

20. **EQUAL EMPLOYMENT OPPORTUNITY.** Contractor shall not refuse to hire, discharge, promote or demote, or discriminate in matters of compensation against any person otherwise qualified solely because of race, creed, sex, color, national origin or ancestry, religion, disability, age, sexual orientation, gender identity, veteran status, or any other basis prohibited by federal, state, or local law.

21. **BINDING AUTHORITY.** Contractor represents and affirms that the signature page hereof accurately states the full legal name of Contractor (whether as a corporation, partnership, limited liability company, sole proprietorship, or other), contains all requisite signature(s) on behalf of Contractor, has been properly acknowledged by attestation, notary acknowledgment, or both, and in all other respects is effective to bind Contractor, in accordance with all applicable statutes, regulations, resolutions, rules, bylaws, agreements, or similar sources of authority or limitation.

22. **PREFERENCES IN EMPLOYMENT OF COLORADO LABOR. To the extent that obligations and responsibilities may be established by C.R.S.** § 8-17-101 *et seq.,* as amended, with respect to certain public entities and those contracting therewith as to the procurement of services:

a. Colorado labor shall be employed to perform eighty percent (80%) of the work.
b. Any waiver of this requirement must comply with C.R.S. § 8-17-101 *et seq.,* as amended.

23. **RETAINAGE REQUIREMENTS.** Contractor agrees to submit monthly invoices together with any retainage requirements as prescribed by Colorado state statutes (*see e.g.,* C.R.S. §§24-91-101 *et seq.*). Payment from Arvada will traditionally be paid NET (15) days but no later than NET thirty (30) days. Invoices will accurately reflect actual work completed by Contractor.

SPECIAL TERMS AND CONDITIONS FOR BIDDERS

1. **RECEIPT AND OPENING OF BIDS.** Bids submitted electronically on the BidnetDirect.com web site only become available to the City of Arvada after the Bid closes.
Bidder shall assume full responsibility for timely upload of bid to the Bidnetdirect web site. The City reserves the right, where its best interest will be served, to accept or reject any conditional or qualified Bid.

2. **QUANTITY AND NATURE OF THE WORK.** Bidders must satisfy themselves of the accuracy of the estimated quantities in the Bid Schedule by examination of the site and a review of the drawings and specifications including Addendum. After Bids have been submitted the Bidder shall not assert that there was a misunderstanding concerning the quantities of work or of the nature of the work to be done.

3. **CONTENTS OF BID.** Contractors are required to submit Bids with the following conditions:

1) Contractors shall make all investigations necessary to inform themselves of the sites affected and the work required by the Solicitation.

2) Any official interpretation of the Solicitation may only be issued by an authorized agent of the City. The City shall not be responsible for other interpretations offered by employees not authorized.

3) The City shall issue Addenda if substantial changes are required which may impact the content and submission of Bids. A copy of such addenda will be publicly posted with the original CSB posting.

4) The apparent silence or omissions within this Solicitation regarding a detailed description of the materials or services shall be interpreted to mean that only the best commercial practices are to prevail and that only materials and workmanship of first quality are to be provided.

4. **BID SECURITY.** Each Bid must be accompanied by a PHOTO of the Bid Bond, on the form attached to these contract documents, payable to the City for five (5) percent of the total amount of the Bid. As soon as the bid Prices have been compared, the City will notify an intent to award on the Bidnetdirect.com web site. The vendor who is named as the intent to award Contractor must submit the physical Bid Bond within 10 days or the intent to award may be revoked. The Bid Bond of the successful Bidder will be retained until the Payment and Performance Bond has been executed and approved after which it will be returned. A certified check may be used in lieu of a Bid Bond.

5. **POWER OF ATTORNEY.** Attorneys-in fact who sign Bid Bonds or Payment and Performance Bonds must file with each bond a certified and effective dated copy of their power of attorney.

6. **QUALIFICATION OF BIDDER.** The City may make such investigation as it deems necessary to determine the ability of the Bidder to perform the work. The City reserves the right to reject any Bid if the evidence submitted by, or investigation of, such Bidder fails to satisfy the City that such Bidder is properly qualified to carry out the obligation of the Contract Agreement and to complete the work contemplated therein. The City reserves the right, before awarding the contract, to require a Contractor to submit evidence of its qualifications including, but not limited to, financial, technical and other qualifications, as well as past performance with the City, for consideration in making the award in the best interest of the City.

7. **AWARD OF CONTRACT.** Bids shall be awarded to the lowest-priced responsible and most responsive bidder whose bid meets the requirements and criteria set forth in the CSB within the limits of funds available and that best serves the City's interest. The City, within seven (7) calendar days of receipt of acceptable Contract Security and triplicate copies of the Contract Agreement, signed by the Bidder to whom the Contract was awarded, shall sign the Contract Agreement and return to the Bidder an executed copy of the Contract Agreement. Should the City not execute the Contract Agreement within such period, the Bidder may, by written notice, withdraw his signed Contract Agreement. Such notice of withdrawal shall be effective upon receipt of the written notice by the City.

8. **NOTICE OF AWARD AND FAILURE TO ENTER INTO CONTRACT.** The party to whom the Contract is to be awarded will be required to execute the Contract Agreement in triplicate, obtain Certificates of Insurance and a Performance and Payment Bond, as Contract security, within five (5) calendar days from the date the Notice of Award is delivered to the Bidder. The Notice of Award shall be accompanied by the Contract Agreement and the necessary Performance and Payment Bond forms. In case of failure of the bidder to execute the Contract Agreement and provide satisfactory Insurance and Contract Security, the City may at his option, consider the Bidder in default, in which case the Bid Bond accompanying the Proposal shall become the property of the City.

9. **CONTRACT DOCUMENTS.** The Contract Documents consisting of the Bid Documents, which include the Advertisement for Bids, Information for Bidders, General Terms and Conditions, Special Terms and Conditions, Insurance Requirements, Project Special Provisions, Addendum, Bid Bond, Bid Proposal, Bid Schedule, Vendor Submittal Form, Construction Drawings, Supplemental Specifications and the City of Arvada "Engineering Code of Standards and Specifications for the Design and Construction of Public Improvements", dated January 12, 2016, which include the Measurement and Payment specifications, and the attached Notice of Award form, Contract Agreement form, Performance and Payment Bond form, Notice to Proceed form, and Change Order form, when combined, contain the provisions required for the construction of the Project. Information obtained from an agent or employee of the City or any other person shall not affect the risks or obligations assumed by the Contractor or relieve him from fulfilling any of the conditions of the contract.

10. **TERM OF CONTRACT.** This contract shall commence on the date of the purchase order or contract execution and shall remain in effect until such time as the commodities, equipment and/or services acquired in conjunction with this Bid have been accepted by the City's authorized representative. Any required warranty period which exceeds this term shall remain in full force for the duration of the warranty period.

11. **PRICING SHALL BE FIXED AND FIRM.** The prices offered by the Contractor shall remain fixed and firm for at least 90 ninety days. No changes in the Bid shall be allowed after the date and time of the Bid deadline due to error by the Contractor.

12. **CONTRACT SECURITY.** A Performance and Payment Bond, on the form attached to these contract documents, in the amount of 100% of the Contract price, with a corporate surety approved by the City, will be required for the faithful performance of the Contract.

13. **NOTICE TO PROCEED.** The Notice to Proceed shall be issued within seven (7) calendar days of the execution of the Contract Agreement by the City. Should there be reason why the Notice to Proceed cannot be issued within such period, the time may be extended by mutual agreement between the City and the Contractor. In the event the Notice to Proceed has not been issued within the seven day period or within the period mutually agreed upon the Contractor may terminate the Contract Agreement without further liability on the part of either party.

14. MODIFICATION OR WITHDRAWAL OF BIDS BY CONTRACTOR.

Modifications to Bids- Changes to the Bid after the submission deadline shall be allowed only when the Contractor can show convincing evidence that an unintentional factual mistake was made. Modification requests must be made in writing. Any modification submitted to the City must have the Contractor's name, address, Solicitation Number and title included.

Withdrawal of Bids- If a Bid is withdrawn by Contractor after the Bid Opening, the City may, at its option, suspend the Contractor for a six (6) month period following the withdrawal. Withdrawal of the Bid after the Bid Opening will result in the Contractor forfeiting the provided Bid Bond.

15. REJECTION OF OFFERS BY CITY.

A. The City may reject a Bid, in whole or in part, for reasons including, but not be limited to:
   1) The Contractor misstates or conceals any material fact in its Proposal;
   2) The Contractor's Bid does not strictly conform to the law or requirements of the Solicitation;
   3) The Bid expressly requires or implies a conditional award that conflicts with the method of award stipulated in the Special Conditions;
   4) The Bid does not include documents which are required for submission with the Bid; or
   5) The Bid has not been executed by the Contractor through an authorized signature.

B. The City may, at its sole and absolute discretion:
   1) Reject all or parts of Bids submitted by prospective Contractors;
   2) Re-advertise this Solicitation;
   3) Postpone or cancel the Solicitation;
   4) A Bid may not be accepted from, nor any contract be awarded to, any person or firm which
      a) is in arrears to the City for any debt or Contract, or is a defaulter as surety for any obligation to the City.
      b) has failed to perform faithfully any previous contract with the City, State or Federal governmental for a minimum period of one (1) year after this previous Contract was terminated for cause.
      c) has pending litigation against the City on the date and time that the Solicitation is due.

16. **CLARIFICATION AND MODIFICATIONS.** The contract resulting from this solicitation will be subject to the Solicitation materials, City Ordinance, State and Federal Statutes. When conflicts occur, the highest authority shall prevail. Contractors are required to indicate any variances to the terms, conditions, requirements and specifications of this Solicitation; no matter how slight. If variations are not stated in the Contractor's Bid, it shall be agreed that the Contractor's Bid fully complies with all conditions identified in this Solicitation.

17. **ELIGIBILITY OF CONTRACTORS: MUST BE ENGAGED IN SUPPLYING PRODUCTS OR SERVICES RENDERED.** Bids will only be considered from firms which have been engaged in the business of manufacturing or distributing the goods and/or performing services described in this Solicitation. Contractors must be able to produce evidence that they have an established satisfactory record of performance for at least two (2) years and have sufficient finances and structure to ensure
that they can satisfactorily execute the Contract requirements, as determined by authorities of the City. The City reserves the right, before awarding the contract, to require a Contractor to submit evidence of its qualifications including, but not limited to, financial, technical and other qualifications, as well as past performance with the City, for consideration in making the award in the best interest of the City.

18. ELECTRONIC PAYMENT METHODS - CITY OF ARVADA SINGLE USE ACCOUNT.

Contractors are encouraged to consider the following method of payment.
Single Use Account: The City incorporates the use of Single User Accounts as an option to seamlessly process payment of larger dollar purchase orders and contracts to vendors/contractors/providers. A secure, one-time payment transaction account processes to pay invoices via the Contractor's merchant bank. Invoice payments have an enhanced speed-of-pay cycle that can significantly benefit cash flow.

19. **CONDITIONS OF WORK AND OBLIGATION OF BIDDER.** Each Bidder is responsible for independently inspecting the site and for reading and being thoroughly familiar with the Contract Documents and for providing the names of major suppliers and sub-contractors in the space provided on the Bid Proposal form. The failure or omission of any Bidder to do any of the foregoing shall in no way relieve the Bidder from any obligation in respect to his Bid Proposal.

20. **CONTRACTOR LICENSE.** The Contractor to whom the contract is awarded and any subcontractors employed by the Contractor must have or acquire the appropriate Contractor's license issued by the City of Arvada Engineering Division, including submittal of license bond, necessary insurance certificate, and license fee before initiating any work. The Contractor and any subcontractors will also be required to obtain a no charge Public Improvements Permit from the City of Arvada Engineering Division prior to initiating any and all work on this project.

21. PERFORMANCE MEASUREMENTS FOR SERVICES MORE THAN $15,000.
The City has incorporated Performance Management into its organizational culture. The City will monitor and report on the following performance measures. These measures will determine, in part, renewals and eligibility for future awards. Measures include: (a) safety as defined by observation and OSHA reportable injuries, (b) quality of contracted work, (c) work completed within required schedule, (d) administration and coordination of estimates, RFIs, ASIs, change orders, pay requests and close out documents, (e) fair and justifiable change orders, (f) responsiveness and follow through on requests.

SERVICES means: the furnishing of labor, time, effort, maintenance, etc., by a vendor/contractor/consultant, with an initial contract amount of more than $15,000.

23. PREPARATION AND SUBMISSION.
Bids will be prepared as follow:

1) A blank shall be construed as "No Bid/not offered". Where there is a discrepancy between the unit price and the extension of prices, the unit price shall prevail.
2) Contractors will not knowingly participate in solicitations where there exists a conflict of interest with their firm and a member of City staff or their immediate family.
3) The only authorized version of this Bid is posted on WWW.BIDNETDIRECT.COM. Registration is available to receive email notification of new solicitations, addenda, and communications.

INSURANCE REQUIREMENTS

The following listed insurance requirements shall be carried by the selected Contractor for the entirety of the contract. Applicable requirements for this solicitation are identified by completed check boxes.

1. ☒ **Commercial General Liability**, written on an occurrence form, for limits not less than $1,000,000.00 for bodily injury and property damage for each occurrence and not less than $2,000,000.00 aggregate. Coverage shall include premises and operations liability, blanket contractual, broad form property damage, products and completed operations and personal injury endorsements.

2. ☒ **Workers' Compensation and Employers Liability** as required by statute. Employers Liability coverage is to be carried for a minimum limit of $1,000,000.00 per accident.

3. ☒ **Automobile Liability** for limits not less than $1,000,000.00 combined single limit for bodily injury and property damage for each occurrence. Coverage shall include owned, non-owned and hired automobiles.

4. ☒ **Umbrella Liability** of $5,000,000.00, following form to the Commercial General Liability.

5. ☐ **Pollution Legal Liability Insurance** for limits not less than $1,000,000 per occurrence (or claims made) and not less than $1,000,000 aggregate for bodily Injury, personal Injury and property Damage.

Additional Insurance Requirements:

- Contractor will be required to, at its own expense, keep in full force and effect during the term of the Agreement, and during the term of any extension or amendment of the Agreement, insurance reasonably sufficient to insure against the liability assumed by Contractor pursuant to the provisions of the solicitation sent by the City of Arvada or as determined by the City of Arvada Risk Manager.
- All coverage must be written with carriers holding a minimum A.M. Best rating of A-:VII, and authorized to do business in Colorado. Coverage shall be primary, and any insurance held by the City of Arvada is excess and non-contributory.
- Issuance of a Purchase Order/Contract is contingent upon the receipt of the insurance documents. Work shall not commence before this requirement is met. If the Contractor fails to submit the required insurance documents within 15 calendar days after notice to submit such policies is given to the Contractor by a City representative, the Contractor may be in default of the Award.
- Except for Workers Compensation, Employer's Liability insurance, Automobile Liability and Professional Liability insurance, the City of Arvada must be endorsed as an additional insured on a Certificate of Insurance.
- The City, through its Risk Manager, reserves the right to require additional insurance coverage and other requirements.

SPECIAL PROVISIONS

City of Arvada Project No. 18-WA-10, Project Title: Sleeping Indian Water Storage Tank

Conditions peculiar, but essential, to the successful performance and acceptance of the work on this project are itemized below. As such, they shall take precedence over the City of Arvada Engineering Code of Standards and Specifications for the Design and Construction of Public Improvements.

A. GENERAL CONSIDERATIONS

SC-A-1 CONTRACT TIME AND LIQUIDATED DAMAGES: This project is to be have substantial completion no later than June 15, 2022. Project completion, including cleanup, shall be by August 1, 2022, unless the contract time is adjusted by change order. The Contractor shall agree to pay to the Owner, as liquidated damages, the sum of $3000 for each consecutive calendar day that the work exceeds the allotted contract time.

SC-A-2 MEASUREMENT AND PAYMENT: Measurement of the work performed and payment, at the unit or lump sum price quoted in the Bid Schedule, shall be made in accordance with requirements of the Measurement and Payment Section of the Contract Documents or as hereinafter stated in the Special Conditions.

SC-A-3 OSHA REQUIREMENTS: Observing the rules and regulations required by the Occupational Health and Safety Administration (OSHA) is the responsibility of the Contractor on this project.

SC-A-4 CITY HOLIDAYS: The Contractor, when performing work on a city holiday, Saturday, Sunday, or in excess of ten (10) hours on a weekday, in accordance with Section 27-174(b)(2) of the Code of the City of Arvada, agrees to reimburse the Owner for the inspector's time at the following rate:

First 2 hours, or fraction thereof: $100.00
Each additional 2 hours or fraction thereof: $100.00

Payment shall be made payable to the City of Arvada within ten days of the date of invoice from the Owner.

SC-A-5 MINOR CONTRACT REVISIONS: Miscellaneous modifications in the work, ordered by the Project Engineer in the form of a field order, will be considered a minor contract revision. Payment for accepted work performed under this pay item "Minor Contract Revision" will be made in accordance with General Conditions and 2.16 and 2.17 of the Arvada Engineering Code of Standards and Specifications. If the contractor feels that a field order issued by the Engineer entitles the contractor to a change in the total contract price or time, or both, (i.e. the contractor feels that the field order involves costs over and above the amount available in the Minor Contract Revisions bid item) then the Contractor shall notify the Engineer, in writing, within 15 days after receipt of the field order. The Contractor shall not execute any such field order changes ordered by the Engineer pending the receipt of a written Change Order document executed either by the City Manager or Mayor authorizing an increase in the total contract price. Any such work completed by the contractor prior to receipt of an executed Change Order will be at the contractor's risk and be subject to removal by the contractor should a Change Order not be approved and executed by the City Manager or Mayor for such work.

SC-A-6 FIELD ORDERS: An authorized representative of the contractor shall acknowledge receipt of field orders by promptly signing all written field orders delivered to the job site. Verbal field orders given by the Engineer will be recorded in wri ting in the municipal inspector's daily report that is to be signed by the contractor's authorized representative.

SC-A-7 PROJECT STATUS MEETINGS: Project status meetings will be held as necessary for scheduling, communication, and problem solving throughout the duration of the project. Contractor shall ensure that the project manager, superintendent or foreman is present and prepared to furnish the City with the schedule of work operations at each of these meetings as requested by the Engineer throughout the project.

SC-A-8 CHANGE OF METHOD: Any cost due to a change in construction method will be the responsibility of the contractor.

SC-A-9 INSPECTION OF SITE: The contractor is responsible for being knowledgeable of the existing site conditions prior to submitting a bid and initiating construction.

SC-A-10 CONSTRUCTION WATER: All construction water will be provided by the City free of charge through existing City owned facilities. Contractor will be required to obtain a hydrant meter from the City Utilities division which will require a $2,000 refundable meter deposit upon return of the meter in acceptable working condition.

SC-A-11 STORMWATER CONSTRUCTION PERMIT: As a subsidiary obligation of the contract, the Contractor shall obtain a Stormwater Construction Permit from the Colorado Department of Public Health and Environment, Water Quality Control Division, Permit Enforcement Section, prior to clearing, grading, or excavating a site of one (1) acre or more. A copy of the approved permit must be submitted to the City of Arvada Engineering Division prior to the start of clearing, grading or excavating of the site. A copy of the approved permit must also be available on the project site at all times during construction. Contractor shall also obtain a Colorado state Construction Dewatering Discharge Permit from the Colorado Department of Public Health and Environment for all areas where dewatering is required and water is discharged into a storm sewer, channel, irrigation ditch or any waters of the United States. A copy of the approved permit must be submitted to the Engineer prior to the start of any dewatering. A copy of the approved permit must also be available on the project site at all times during construction.

In addition, the Contractor shall be required to obtain a City of Arvada Site Development Permit from the Arvada Stormwater Utility Division. For permit requirements go to Arvada.org/services and click on Building/Development. Contractor shall implement best management practices that include inlet protection for all inlets affected by the work as well as stockpile protection in order to control runoff from stockpiles. Contractor shall also be required to perform daily street sweeping to limit tracking from the work site. Uncontrolled releases of dirt or silt from the project into drainage ways, which includes the gutter or stormwater inlets, constitutes a violation of Arvada Ordinance punishable by up to $999 per day per incident. No additional payment will be made for obtaining a City of Arvada Site Development Permit and implementing best management practices required to prevent uncontrolled releases of dirt or silt from the project into drainage ways, which includes the gutter or stormwater inlets.

B. CONSTRUCTION CONSIDERATIONS

SC-B-1 PRE-CONSTRUCTION AND SCHEDULING: A pre-construction meeting will be scheduled prior to the start of work. Attendance by the contractor's project manager and/or construction superintendent will be required. A construction schedule shall be submitted by the contractor to the project engineer at least three (3) days prior to the pre-construction meeting. The schedule shall be in bar chart form and shall at a minimum indicate the start and completion dates of work at each construction location. The contractor shall also provide the City with an after-hours emergency contact phone number at the pre-construction meeting.

SC-B-2 MINIMIZING WORK ZONE DAMAGES: During all phases of construction including cleanup, contractor shall operate all equipment and utilize personnel so as to minimize or prevent damages to public or private property. Contractor shall limit operation of heavy equipment to safe prudent speeds and minimize operation of equipment over concrete sidewalks, cubs and gutters. Contractors shall also conduct operations to avoid dings, nicks, gouges, scrapes, etc., on streets and concrete curb, gutter and sidewalks as well as other facilities in the construction area. Should contractors' operations cause damages, contractor shall be fully responsible for repairs at no cost to the City.

All public or private property damaged during the construction process must be repaired within two weeks of street and right-of-way clean-up. Should repair items not be completed within two weeks, city may initiate and complete the repair work; deducting costs to complete the work from total contract.

SC-B-3 LIMITATION ON CONSTRUCTION ZONE: Any work outside of City-owned property or easements is not allowed unless Contractor obtains a construction easement from that property owner. A copy of the easement shall be maintained at the project site.

SC-B-4 TRAFFIC CONTROL AND STREET RESTRICTIONS: Traffic control methods shall conform to Arvada Engineering Code of Standards and Specifications and the FHA Manual for Uniform Traffic Control Devices and Colorado Supplement thereto. When working in State Highway right-of-way, traffic control methods shall meet the requirements of the Colorado Department of Transportation (CDOT). Contractor's traffic control plan is subject to CDOT approval prior to commencing work on State Highway right-of-way. No hand painted traffic control devices will be permitted. After award of the contract and prior to the start of construction, contractor shall submit two copies of the traffic control plans for approval encompassing all locations of the project. The contractor shall modify the installation to meet requirements of the City of Arvada Traffic Department, if so required.

The contractor is required to obtain any necessary CDOT permits for traffic control on/in State Highway right-of-way.

The contractor shall notify the Arvada Traffic Division (720-898-7740) of all closures, either partial or complete, of any public street, road, highway or alley per Section 50 of Arvada's Engineering Code of Standards and Specifications. Notification shall be made a minimum of 24 hours in advance of the actual closure; except on commercial, parkway, and collector streets, where a minimum three (3) day advance notice will be required. Closure of streets is not anticipated for this project.

MEASUREMENT: The traffic control shall be a lump sum item for all aspects of the traffic control plan. Payment for traffic control shall be full compensation for the traffic control and labor, equipment and materials required to implement the traffic control plan.

PAYMENT: Prorated payment of the contract amount bid for traffic control will be made monthly. The percentage paid shall be equal to the percentage of the total contract dollar amount completed that month. In no case shall payment be more than 100% of the amount bid for Traffic Control.

SC-B-5 INSPECTION AND TESTING: Inspection and testing shall be as described in the contract documents.

BID BOND

We, the undersigned_____as Principal, and_____as Surety, are hereby held and firmly bound unto the City of Arvada, Colorado, in the penal sum of_____for the payment of which, well and truly to be made, we hereby jointly and severally bind ourselves, successors and assigns.

THE CONDITION of this obligation is such that whereas the Principal has submitted to the City of Arvada, Colorado the accompanying Bid Proposal, and hereby made a part hereof to enter into a Contract Agreement for the construction of City of Arvada Project No. 18-WA-10, Sleeping Indian Water Tank.

WHEREAS, the City, as a condition for receiving said Bid Proposal, requires the Principal to deposit with the City a Bid Proposal Guaranty, equivalent to not less than 5 Percent of the amount of said Bid Proposal.

NOW THEREFORE,

(A) If said Bid Proposal shall be rejected; or in the alternate,

(B) If said Bid Proposal shall be accepted and the Principal shall execute and deliver a Contract Agreement (properly completed in accordance with said Bid Proposal) and shall furnish a Performance and Payment Bond upon the forms prescribed by the City for the faithful performance of said Contract; and for the payment of all persons performing labor or furnishing materials in connection therewith; and shall in all other respects perform the agreement created by the acceptance of said Bid Proposal;

Then this obligation shall be void, otherwise the same shall remain in force and effect; it being expressly understood and agreed that the liability of the Surety for any and all claims hereunder shall, in no event, exceed the penal amount of this obligation as herein stated.

The Surety, for value received, hereby stipulates and agrees that the obligations of said Surety and its bond shall be in no way impaired or affected by any extension of the time within which the City may accept such Bid and said Surety does hereby waive notice of any such extension.

IN WITNESS WHEREOF, the Principal and the Surety have hereunto set their hands and seals, this_____day of _____, 2020, and such of them as are corporations have caused their corporate seals to be hereto affixed and these presents to be signed by their proper officers, the day and year first set forth above.

PERFORMANCE AND PAYMENT BOND

Bond No._____

(Firm)_____

(Address)_____
(an Individual), (a Partnership), (a Corporation), hereinafter called Principal; and

(Firm)_____

(Address)

_____
hereinafter called Surety, are held and firmly bound unto the City of Arvada, a Colorado municipal corporation, 8101 Ralston Road, Arvada, Colorado 80002, hereinafter called the City, in the penal sum of , Dollars, , in lawful money of the United States, for the payment of such sum will and truly to be made, we bind ourselves, successors and assigns, jointly and severally, firmly by these presents.

THE CONDITION OF THIS OBLIGATION are such that the Principal entered into a certain Contract with the City, dated the day of , 2020, a copy of which is hereto attached and made a part hereof, for the performance of City of Arvada Project No.'s 20-SR-02, 2020 Trenchless Sewer Main Replacement.

NOW THEREFORE, if the Principal shall well, truly and faithfully perform its duties, all the undertakings, covenants, terms, conditions and agreements of said Contract during the original term thereof, and any extensions thereof which may be granted by the City, with or without Notice to the surety and during the life of the guaranty period, and if he shall satisfy all claims and demands incurred under such Contract, and shall fully indemnify and save harmless the City from all cost and damages which it may suffer by reason of failure to do so, and shall reimburse and repay the City all outlay and expense which the City may incur in making good any default, and if he shall promptly make payment to all persons, firms, subcontractors and corporations furnishing materials for or performing labor in the prosecution of the work provided for in such Contract, and any authorized extension or modification thereof, including all amounts due for materials, lubricants, repairs on machinery, equipment and tools, consumed, rented or used in connection with the construction of such work, and all insurance premiums on said work, and for all labor, performed in such work whether by subcontractor or otherwise, then this obligation shall be void; otherwise to remain in full force and effect.

PROVIDED, FURTHER, that the said Surety, for value received, hereby stipulates and agrees that no change, extension of time, alteration or addition to the terms of the Contract or to the work to be performed thereunder or the specifications accompanying the same shall in anyway affect its obligation on this bond, and it does hereby waive notice of any such change, extension of time, alteration or addition to the terms of the Contract or to the work or to the specifications.

PROVIDED, FURTHER, that no final settlement between City and the Contractor shall abridge the right of any beneficiary hereunder, whose claim may be unsatisfied.

IN WITNESS WHEREOF, this instrument is executed in three counterparts, each one of which shall be deemed an original, this the___day of_____, 2020.

RE: Project No. 20-SR-02, 2020 Trenchless Sewer Main Replacement

Dear Representative of_____:

The City of Arvada, Colorado (hereinafter called "City") has considered the Bid Proposals submitted for referenced work in response to its Advertisement for Bids dated_____and Information for Bidders.

You are hereby notified that your Bid Proposal has been accepted, for items and prices stated in the Bid Schedule, in the amount of $_____.

You are required to execute the Contract, the Insurance Certificates and a Performance and Payment Bond within seven (7) days from the date of this Notice to you.

The Performance and Payment Bond needs to be filled out, returned (one original must be returned to the City), and accompanied by the Power of Attorney from your surety company. Also, please make sure that the insurance certificate is in the minimum amounts set forth in the Contract Documents and the City of Arvada is named as an additional insured for the specific Project Number and Title. An Additional Insured endorsement certificate should also be attached.

If you fail to execute said Contract and furnish the necessary Insurance Certificates and Bond within the time allotted from this date, the City will be entitled to consider all your rights arising out of the City's acceptance of your Bid Proposal as abandoned and as a forfeiture of your Bid Bond. The City will be entitled to such other rights as may be granted bylaw.

You are required to return an acknowledged copy of this Notice of Award and enclosures to the Project

Engineer. CITY OF ARVADA,COLORADO

Title: _____

AN AGREEMENT BY AND BETWEEN THE CITY OF ARVADA AND
_____FOR_____
IN AN AMOUNT NOT TO EXCEED $ _____.00

This Agreement made this_____day of_____, 20___by and between the City of Arvada, a home rule municipal corporation ("Arvada" and/or "City") and_____, a _____("Contractor").

WITNESSETH: That for and in consideration of the covenants, promises, and payments hereinafter mentioned:

1. Contractor will commence and complete the_____described in the Contract Documents relating to CSB-_____, issued_____, 20 , ("the Work").

2. Contractor will furnish all material, supplies, tools, equipment, labor, and other services necessary for the completion of the Work.

3. Contractor will commence the work required by the Contract Documents within ten (10) calendar days after the date of Notice to Proceed.

4. Contractor will complete the work required by the Contract Documents by __ after the date of the Notice to Proceed unless the period for completion is extended otherwise by the Contract Documents.

5. Contractor agrees to perform all of the work described in the Contract Documents for an amount not to exceed **$ .00** for the Work.

6. The term "Contract Documents" means and includes the following:

A. Arvada's Request for [Project Title], CSB-_____("CSB");
B. CSB Exhibits (if any);
C. CSB Addenda (if any);
D. Contractor's Response to CSB-_____, Advertisement for Bid, Bid Proposal, Bid Schedule, Bid Bond, Certificate of Insurance;
E. Notice of Award;
F. Performance and Payment Bond;
G. Notice to Proceed;
H. Change Orders (if any);
I. City of Arvada Engineering Code of Standards and Specifications for the Design and Construction of Public Improvements;
J. Project special provisions prepared or issued by City of Arvada (or its Consultant if applicable);
K. Detail drawings and Bid Documents prepared or issued by City of Arvada (or its Consultant if applicable);
L. Specification Illustrations and attachments; and
M. All supplementary requirements regarding wage rates, E.E.O., affirmative action and all other Federal-State requirements as outlined in the specifications.

7. INVOICES AND COMPENSATION. Contractor will follow Bid schedule and partial payments will be made accordingly NET 15 but no later than NET 30.

8. GENERAL TERMS AND CONDITIONS, SPECIAL TERMS AND CONDITIONS, INSURANCE REQUIREMENTS, PROJECT SPECIAL PROVISIONS, AND OTHER CSB REQUIREMENTS. Contractor affirms that it has read and is familiar with the Contract Documents, including but not limited to the General Terms and Conditions, Special Terms and Conditions, Insurance Requirements, Project Special Provisions, and other CSB requirements, and agrees to be bound by those terms and conditions.

9. CHANGE ORDERS. Contractor shall perform the Work as described in the Contract Documents or as amended by the mutual consent of the parties in writing. Should the parties agree in writing to a change in the scope of services, then the parties will timely execute any applicable Change Order, which will address changes in scope of services, completion date, contract amount, any applicable material modifications, and any other matters that the parties deem necessary.

10. PREFERENCES IN EMPLOYMENT OF COLORADO LABOR. To the extent that obligations and responsibilities may be established by C.R.S. § 8-17-101 *et seq.,* as amended, with respect to certain public entities and those contracting therewith as to the procurement of services:

a. Colorado labor shall be employed to perform eighty percent (80%) of the work.
b. Any waiver of this requirement must comply with C.R.S. § 8-17-101 *et seq.,* as amended.

11. PERFORMANCE MEASURES. The Performance Measures for this Agreement shall be those outlined by Arvada in Section 22 of Special Terms and Conditions for Bidders in the CSB, which are included in the Contract Documents that are exhibits to this agreement.

12. ADDITIONAL DOCUMENTS OR ACTION. The parties agree to execute any additional documents and to take any additional action that is necessary to carry out this Agreement.

13. BINDING EFFECT. This Agreement shall inure to the benefit of, and be binding upon, the parties, their respective legal representatives, successors, heirs, and assigns; provided, however, that nothing in this paragraph shall be construed to permit the assignment of this Agreement except as otherwise expressly authorized herein.

14. PARAGRAPH CAPTIONS. The paragraph captions in this Agreement are set forth only for the convenience and reference of the parties and are not intended in any way to define, limit, or describe the scope or intent of this Agreement.

15. INTEGRATION, AMENDMENT, AND SEVERABILITY. This Agreement represents the entire agreement between the parties, and there are no oral or collateral agreements or understandings. This Agreement may be amended only by an instrument in writing signed by the parties. If any other provision of this Agreement is held invalid or unenforceable, no other provision shall be affected by such holding, and all of the remaining provisions of this Agreement shall continue in full force and effect if the essential terms and conditions of this Agreement for both parties remain valid, legal, and enforceable.

16. NOTICES. Any notice or notification required or permitted by the Agreement shall be in writing and shall be deemed to have been sufficiently given for all purposes if sent by certified mail or registered mail, postage and fees prepaid, addressed to the party to whom such notice is to be given at the address set forth on the signature page below, or at such other address as has been previously

furnished in writing, to the other party or parties. Such notice or notification shall be deemed to have been given when deposited in the United States mail.

17. BINDING AUTHORITY. Contractor represents and affirms that the signature page hereof accurately states the full legal name of Contractor (whether as a corporation, partnership, limited liability company, sole proprietorship, or other), contains all requisite signature(s) on behalf of Contractor, has been properly acknowledged by attestation, notary acknowledgment, or both, and in all other respects is effective to bind Contractor, in accordance with all applicable statutes, regulations, resolutions, rules, bylaws, agreements, or similar sources of authority or limitation. This Agreement may be executed in counterpart(s), each of which shall be deemed to be an original, and all of which, taken together, shall constitute one instrument.

IN WITNESS WHEREOF, the parties hereto have executed, or caused to be executed by their duly authorized officials, this Agreement which shall be deemed an original on the date first above written.

CSB Addenda (if any)

CSB-21-Sleeping Indian Tank Q&A

1. The C Drawings indicate a new area of “4” HBP”, which I assume to be Hot Bituminous Paving. Please confirm. (Yes) Secondarily, I do not see a specification for this HBP within the bid documents. Please advise.
    a. Please use City Standards.
2. Please advise if there is a desired area for stockpile/staging/laydown.
    a. This is the contractor responsibility. Addendum 1 provides the adjacent landowner name and phone number.
3. There is not a spec for the welded steel pipe or the PVC piping. Can the engineer provide those specs?
    a. Steel pipe spec is attached. For PVC, please provide C900 pipe as specified in City Standards.
4. A big reason I’ve asked about a laydown/stockpile area is because the area within the existing fencing is not even close to large enough to hold the required stockpiled soil amount. We’ll have to have another area which I didn’t see called out anywhere. Please advise.
    a. This is the contractor responsibility. Addendum 1 provides the adjacent landowner name and phone number.
5. The drawings call out some butterfly valves. There is no spec for butterfly valves. Can the engineer provide a butterfly valve spec?
    a. Please use City Standards.
6. Can you please confirm if the bid just gets emailed to wsmith@arvada.org or if it is supposed to be uploaded to BidNet (or possibly both?) The invite to bid mentions both methods
    a. Please submit your response to wsmith@arvada.org.
7. Is the project warranty 1 year?
    a. Standard City warranty is 2 years.
8. Is water or power available onsite for contractor use?
    a. Water shall be obtained from a hydrant, using the City’s standard procedure as detailed in the City’s Standards. The closest hydrant is on the northeast corner of Highways 92 and 72.
    b. Power is not available for the Contractor from City facilities on the site.
9. Is it possible for the City to provide the AutoCad drawings for the site/civil?
    a. Yes. Attached.
10. Can you please provide a steel pipe specification?
    a. Yes. Attached.
11. Is it acceptable to the City for any extra/leftover soil to be spoiled onsite?
    a. No. Excess soil is Contractor’s responsibility.
12. Will the City or Engineer provide concrete and soil testing services or is that the responsibility of the contractor?
    a. The Contract documents indicate the Contractor is responsible for quality control testing. The City will provide quality assurance testing (random sampling).

13. The geotech report notes an optional plastic geomembrane to be installed under the tank (#5, page 2 of the report). Fig 4 in the geotech report shows this as a 60mil HDPE or equivalent liner. Please confirm this isn't required.
    a. Plastic Geomembrane detailed in the geotech report is required.
14. Does the site have survey control established?
    a. City will establish survey control
15. Are the limits on the area the contractor can use on site limited to the property boundaries and whatever might be negotiated with the landowner? Is it possible to clarify the limits that the City is providing to the contractor?
    a. Area available to the contractor is City property, roughly the existing fence line. Contractor may contact the adjacent landowner for use of adjoining property. Name and contact information for the adjacent landowner is in Addendum 1.
16. Can you please confirm that the warranty period for the tank is 2 years.
    a. Yes. Warranty period is 2 years.
17. Is there a sheet S35 per the callout on drawing P5?
    a. See attached detail.
18. What type and size of anodes are you planning on using.?
    a. See attached detail.
19. Will you clarify with the engineer if the support chairs and bolsters in the attachment are acceptable for the tank wall construction (cut sheet attached)?
    a. Composite chairs and bolsters that meet specifications are acceptable for wall and roof use.

Amendment 1
Sleeping Indian Water Storage Tank
Project No. 18-WA-10

Date Issued: April 15, 2021

1. Attendance at the Pre-bid meeting on April 14 at 11 am is attached.
2. Geotechnical report is attached. This report is for information only and will not be considered to be part of the contract documents.
3. Phase 1 Environmental Report is attached. This report is for information only and will not be considered to be part of the contract documents.
4. Bids are due April 30 at 10:30 (CHANGE)
5. Last day for questions is April 22, 5 pm (CHANGE).
6. Last day for addendum issue is April 27.
7. Pre-bid meeting items are below. The Bid Documents control if there is a conflict between the notes below and the Bid Documents.
    a. Project scope is the tank, connecting pipelines, and sitework
    b. If the General Contractor determines a need or want to use land outside the project property boundary for access, stockpiling, etc., please contact Jeff Nading at 303.772.4051, jnading@gtc1.net. The General Contractor is responsible for obtaining legal permission for use of land outside the property boundary and for any payment as negotiated with the landowner.
    c. General contractor is responsible for any permitting, including, but not limited to, state stormwater permit, City site disturbance permit. General contractor is responsible for the design and maintenance of erosion and sediment control during construction. CDPHE permission has already been obtained.
    d. A reminder that the City is tax exempt.
    e. Please submit all questions in writing to Whitney Smith per the bid documents.
    f. Construction observation will be via a City inspector AND Bob Bates.

Addendum 2

Sleeping Indian Water Storage Tank
Project No. 18-WA-10

Date Issued: April 27, 2021

1. Construction Water. All provisions of the City Standards and Specifications (available on the website) apply to construction water. The closest source of water is an existing hydrant on the NE corner of Highways 93 and 72. On-site piping is not suitable for construction water due to insufficient pressure on the upstream side of the pump station and pumps not suitable for supplying low flows on the downstream side of the pump station.
2. Grass seed. City Standard Specification Section 45 shall generally be followed for installation and maintenance. Grass seed shall not be bluegrass but shall be as detailed below.
    a. *Seed to be used shall be Ephraim Crested Wheatgrass as supplied by Arkansas Valley Seed Company (Phone: 303-320-7500) drilled at 40-lbs/acre and hydromulched at 1,400 lbs/acre of hydromulch. Any slopes greater than 3:1 shall have straw/coconut fabric erosion control blankets installed as part of restoration in accordance with CDOT Standards. Disturbed state highway right-of-way area, where applicable, must be topsoiled, fertilized, mulched and reseeded with Colorado Department of Transportation Specifications grass seed mix.*
3. See Revised and New sheets, attached. Sheets are P1, P2, P13, and P14.
4. See added specification section, 33 11 01, Steel Pipe
5. Questions submitted by contractors, with City and Engineer answers are attached.
6. Cad files are provided, for information only.

    a. Composite chairs and bolsters that meet specifications are acceptable for wall and roof use.

GTI COMPOSITE BAR CHAIRS (SERIES 210)

GTI provides the strongest **Bar Chairs** available in the market. They are made from composite material and exceed the strength of comparable wire supports by up to ten times. The product size is identified on the top of the product and on the foot. **GTI** composite material offers continuous corrosion protection, both on the job-site and in concrete providing a great alternative to epoxy, stainless, and galvanized bar supports.

The **GTI** line of **Composite Bar Chairs** contains points on the bottom of the feet that firmly hold the chair in place and feet that can be stapled to the deck when necessary. **GTI Composite Bar Chairs** are grey in color (custom colors are available) to blend in with concrete and show virtually no change in strength in temperatures ranging from 0ºF to 300ºF.

Primary Uses:

- Single Mat Support – Post-Tensioning, Rebar, or Wire Mesh
- Bottom Layer Double Mat Support – Post-Tensioning, Rebar, or Wire Mesh
- Slab-on-Ground using a Sand Plate

Sizes:

From ½" to 6" (in ¼" increments)

Features:

- Feet that can be stapled
- Points on legs ensure minimal surface contact
- Designed for maximum aggregate flow and concrete consolidation
- Will cradle all sizes of reinforcing

SECTION 33 11 01
STEEL PIPE MORTAR/EPOXY LINED AND TAPE / EPOXY COATED

PART 1 GENERAL

1.1 SCOPE OF WORK

A. This section of the specifications shall govern fabricating, furnishing and installing mortar/epoxy-lined and enamel/tape-coated steel pipelines and fittings including design and all appurtenant work.

B. Pipe design criteria, classes and loading conditions shall be listed on the Drawings. These classes shall be utilized for all pipe designs as applicable. Each pipe classification indicates the pipe diameter, external loadings and hydrostatic head as applicable.

C. The pipe diameter is the finished inside diameter in inches.

D. No pipe shall be manufactured until all required Shop Drawings and design calculations have been approved by the ENGINEER. No changes will be permitted from the initial approved design unless unforeseen field conditions arise which make such changes necessary as determined by the ENGINEER. The CONTRACTOR shall properly check and correct all shop drawings and data prior to submission, whether or not prepared by a subcontractor or supplier. Unchecked submittals will be rejected.

E. In case of any conflict between AWWA or ASTM Standards or other references and the Specifications and Drawings, the Specifications and Drawings shall govern.

F. The pipe manufacturer/fabricator shall be certified by:

1. International Standards Organization (ISO) 9000
2. Steel Plate Fabricators Association.

G. Fittings and specials shall be defined as any bend, tee or fitting or any single-piece shop fabrication including a section of straight pipe and incorporating a bend, tee or fitting.

H. Straight-line pipe shall be defined as all pipe regardless of length that is in a straight line, including straight-line segments of pipe under concrete slabs i.e., pump station and reservoir slabs.

1.2 QUALITY STANDARDS

A. American Society for Test and Materials (ASTM)

1. ASTM A 139, Specification for Electric-Fusion (Arc)-Welded Steel Pipe (Sizes 4 in and Over)
2. ASTM E 165, Methods for Liquid Penetrant Inspection
3. ASTM A 36, Specification for Structural Steel
4. ASTM A 283, Specification for Low and Intermediate Tensile Strength Carbon Steel Plates, Shapes and Bars
5. ASTM A 570, Specification for Hot-Rolled Carbon Steel Sheet and Strip, Structural Quality
6. ASTM A 572, Specification for High-Strength Low Alloy Columbium-Vanadium Steels of Structural Quality
7. ASTM C150, Specification for Portland Cement

B. American Water Works Association (AWWA)

1. AWWA C200, Steel Water Pipe 6 in. and Larger
2. AWWA C203, Coal-Tar Protective Coatings and Linings for Steel Water Pipelines - Enamel and Tape - Hot Applied
3. AWWA C205, Cement-Mortar Protective Lining and Coating for Steel Water Pipe - 4 in. and Larger - Shop Applied
4. AWWA C206, Field Welding of Steel Water Pipe
5. AWWA C208, Dimensions for Fabricated Steel Water Pipe Fittings
6. AWWA C209, Cold-Applied Tape Coatings for the Exterior of Special Sections, Connections and Fittings for Steel Water Pipelines
7. AWWA C210, Liquid-Epoxy Coating Systems for the Interior and Exterior of Steel Water Pipelines
8. AWWA C214, Tape Coating Systems for the Exterior of Steel Water Pipelines
9. AWWA C602, Cement-Mortar Lining of Water Pipelines - 4 in. and Larger - In Place
10. AWWA M11, Steel Water Pipe - A guide for Design and Installation

C. American Welding Society (AWS)

1. ANSI/AWS D1.1 – Structural Welding Code
2. Welding Handbook – Materials and Applications – Part 1

1.3 SUBMITTALS

A. Certifications

1. Copy of ISO 9000 or Steel Plate Fabricators Association certification for the fabrication of welded steel pipe.

2. Certification to be reviewed and accepted prior to review on any pipe shop drawings.

B. Valves and Appurtenances

1. The CONTRACTOR shall furnish certified dimensional drawings of all valves, fittings and appurtenances in accordance with the Drawings.

C. Pipe

1. As soon as practicable, but not later than 30 days after receipt of Notice of Award of Contract, the CONTRACTOR shall submit for approval complete sets of design calculations and prints for steel pipe as follows:
2. Joint and pipe wall construction details which clearly indicate the type and thickness of cylinder; the position, type, size and area of reinforcement; manufacturing tolerances; and all other pertinent information required for the manufacture of the product.
3. The pipe shall be designed and manufactured to meet strength requirements hereinafter described, and so as to conform when laid with line and grades as shown on the Drawings with outlets, connections, test bulkheads and appurtenances as shown. Joint details shall be submitted where deep bell or butt strap joints are required for control of temperature stresses.
4. Detailed Shop Drawings of all fittings and specials such as elbows, wyes, tees, outlets and nozzles or other specials where shown on the Drawings which clearly indicate amount and position of all reinforcement. All fittings and specials shall be properly reinforced to withstand the internal pressure, both circumferential and longitudinal, and the external loading conditions as shown on the Drawings. The fittings and specials shall be fabricated as stipulated herein and in accordance with the manufacturer's specifications and drawings as approved by the ENGINEER.
5. **Design calculations which comprise complete stress analysis of each critical section of pipe wall, girth joints, harness system, specials and openings, all sufficient to ascertain conformance of pipe and fittings with the Specifications during construction and finished grade.**
6. Material lists and steel reinforcement schedules which include and describe all materials to be utilized. Copies of purchase orders shall be furnished which state name of supplier, material specification or description, quantity and delivery commitment if the above information is not contained on the materials lists. Use of materials other than those permitted within the scope of the Specifications shall be prohibited.

7. Line layout and marking diagrams which clearly indicate the specific number of each pipe and fitting and the location of each pipe and the direction of each fitting in the completed line. In addition, the line layouts shall include:

    a. The station and invert elevation at all changes in grade or horizontal alignment.
    b. The station and invert elevation to which the bell end of each pipe will be laid.
    c. All elements of curves and bends, both in horizontal and vertical alignment.
    d. The limits of each reach of restrained and/or welded joints, or of concrete encasement.

D. Mill Certifications and Test Reports

1. The CONTRACTOR shall provide to the ENGINEER four copies of certified test reports covering each material utilized in the work, and of ascertaining conformance with standard specifications including:

    a. Mill certification of analyses and tests of steel.
    b. Certified hydrostatic test reports (to be furnished on a monthly basis).
    c. Certification of compliance of materials and application of linings and coatings.

2. All expenses incurred in making samples for certification of tests shall be borne by the manufacturer.

1.4 INSPECTION OF THE WORK

A. Not less than 14 days prior to the start of any phase of the pipe manufacture, the ENGINEER shall be notified in writing of the manufacturing starting date.

B. During the manufacture of the pipe, the ENGINEER shall be given access to all areas where manufacturing is in process and shall be permitted to make all inspections necessary to confirm compliance with the Specifications.

1.5 MATERIALS TESTING

A. The CONTRACTOR shall perform those material tests required at no additional cost to the OWNER. All testing conducted by the CONTRACTOR may be witnessed by the ENGINEER provided that there shall be no delays in the CONTRACTOR's testing schedule caused by the absence of the ENGINEER.

B. In addition to those tests specifically required, the ENGINEER may request additional samples of any material including mixed concrete and lining and coating samples for testing by the OWNER. The additional samples shall be furnished at no additional cost to the OWNER.

PART 2 MATERIALS

2.1 GENERAL

A. The pipe wall shall consist of a steel cylinder, shop-lined and centrifugally applied Portland cement mortar. The exterior coating shall be prefabricated multi-layer cold applied tape or coal-tar enamel as described in Sections 2.22 and 2.23.

B. The pipe shall be designed, manufactured, tested, inspected and marked in accordance with the provisions of this Specification and except as herein modified shall conform to AWWA C200.

C. Pipe manufactured under AWWA C200 shall be fabricated from sheet conforming to the requirements of ASTM A 570 (Grades 30, 33, 36 or 40) or from plate conforming to the requirements of ASTM A 36, A 283 (Grades C or D) or A 572 (Grade 42) or coil conforming to the requirements of ASTM A 139 (Grades B or C). All longitudinal and girth seams, whether straight or spiral, shall be butt-welded using an approved electric-fusion-weld process.

D. All steel used for the fabrication of pipe shall have a maximum carbon content of 0.25% and shall have a minimum elongation of 22% in a two-inch gage length.

E. After the joint configuration is completed and prior to lining with cement-mortar, each length of pipe of each diameter and pressure class shall be shop-tested and certified to a pressure of at least 80% of the specified yield strength of the pipe steel.

2.2 SPECIALS AND FITTINGS

A. Reinforcement for wyes, tees, outlets and nozzles shall be designed in accordance with AWWA M11, Steel Water Pipe - A Guide for Design and Installation.

B. Reinforcement shall be designed for the working pressure indicated on the Drawings.

2.3 CEMENT-MORTAR LINING

A. Except as otherwise provided in AWWA C205, interior surfaces of all steel pipe, fittings and specials shall be cleaned and lined in the shop with cement-mortar lining applied centrifugally in conformity with AWWA C205. The lining machines shall be of a type that has been used successfully for similar work and shall be approved by the ENGINEER. Every precaution shall be taken to prevent damage to the lining. If lining is damaged or found faulty at delivery site, the damage or unsatisfactory portions shall be replaced with lining conforming to these Specifications.

B. The pipe shall be left bare where field joints occur as shown on the Drawings. Ends of the linings shall be left square and uniform. Feathered or uneven edges will not be permitted.

C. Defective linings, as determined by the ENGINEER, shall be removed from the pipe wall and shall be replaced to the full thickness required. Defective linings shall be cut back to a square shoulder in order to avoid feather edged joints.

D. The progress of the application of mortar lining shall be regulated in order that all hand work, including the repair of defective areas and the removal of outlet stoppers and covers, shall be completed and cured in accordance with AWWA C205. Cement-mortar for patching shall be the same materials as the mortar for machine lining, except that a finer grading of sand and mortar richer in cement shall be used when field inspection indicates that such mix will improve the finished lining of the pipe.

2.4 LIQUID-EPOXY COATING LINING SYSTEM

A. When permitted in writing by the ENGINEER, the pipe may be lined with a liquid-epoxy coating conforming to the requirements and recommendations of AWWA C210.

B. The coating system shall be a two-part (minimum) system chemically cured epoxy. The coating system may consist of two coats of the same, or different, epoxy coating.

C. The minimum dry film thickness (DFT) of the sum of the coats shall be 16 mils. If the manufacturer recommends a DFT of less than 8 mils per coat, then three coats will be required, each less than the recommended single coat maximum DFT thickness.

2.5 JOINT DESIGN AND FABRICATION

A. General

1. The standard joints shall be welded bell and spigot.
2. Bolted sleeve-type coupled or flanged shall be required where shown on the Drawings.
3. The joints furnished shall have the same or higher pressure rating as the abutting pipe.

B. Welded Joints

1. Where shown on the Drawings, pipe and fittings for field welded joints shall be either butt strap joints or lap joints prepared for field welding and shall be in accordance with the requirements of AWWA C200.
2. The method used to form, shape and size bell ends shall be such that the physical properties of the steel are not substantially altered.
3. Unless otherwise approved by the ENGINEER, bell ends shall be formed by expanding with segmental dies. If approved by the ENGINEER, bell ends formed by a rolling process shall be accomplished in not more than six passes (revolutions) over the bell surface and any resulting radius shall be not less than 15 times the thickness of the material being formed.
4. Shop-applied interior linings and exterior coatings shall be held back a minimum of 2 1/2-inches from the point at which the weld is to be made.
5. Both bell and spigot ends shall be sized to provide a difference in circumferential measurement between the outside circumference of the spigot and the inside circumference of the bell of not less than 0.09 inch and not more than 0.49 inch for pipe diameters 24-inch through 54-inch, and not less than 0.09 inch and not more than 0.39 inch for pipe diameters larger than 54-inch.

2.6 EXTERIOR COATINGS

A. Exterior coatings shall be held back from the end of the pipe as shown on the Drawings and as approved by the ENGINEER.

2.7 WELDING REQUIREMENTS

A. All welding procedures used to fabricate pipe shall be prequalified under provisions of AWS D1.1. Welding procedures shall be required for, but not necessarily limited to, longitudinal and girth or spiral welds for pipe cylinders, spigot and bell ring attachments, reinforcing plate and ring flange welds and plates for lug connections.

B. Full and complete information regarding location, types, size and extent of all welds shall be clearly shown on the shop drawings. The drawings shall clearly distinguish between shop and field welds. Joints or groups of joints in which welding sequence is especially important or technique shall be carefully

controlled to minimize shrinkage stresses and distortion shall be so noted. Shop drawings shall specify the groove depths applicable for the effective throat required for the welding process. Welding positions shall be indicated. Shop drawings shall clearly indicate by welding symbols or sketches the details of the welded joints and the preparation of parent metal required to make them. Joints meeting requirements under AWS D1.1, Section 2 shall be so noted on shop drawings. Joints not meeting this requirement shall be qualified as outlined in AWS D1.1, Section 5.

C. All welding shall be done by skilled welders, welding operators and tackers who have had adequate experience in the method of materials to be used. All welders, welding operators and tackers shall be qualified under the provisions of AWS D1.1 using test position 3G. All welders welding in positions not covered by 3G shall be qualified under the appropriate position 5G, 6G, or 6GR. All welding completed by welders not qualified will be rejected.

D. Welders shall be qualified by an independent, local, approved testing agency not more than six months prior to commencing work on the pipeline. Machines and electrodes similar to those used in the work shall be used in qualification tests. The CONTRACTOR shall furnish all material and bear the expense of qualifying welders.

E. If radiographic testing is used in lieu of prescribed AWS bend tests, the weld reinforcements need not be ground or irregularities or juncture with the base metal would cause objectionable weld discontinuities to be obscured in the radiograph. The test coupon shall be radiographed from the top centerline to the bottom centerline on either side. Radiographic testing shall follow the procedure as specified under AWS D1.1. All film and test specimens shall be furnished to the ENGINEER.

2.8 STANDARD PIPE JOINTS

A. Unless otherwise shown on the Drawings or specified herein, pipe joints shall be welded bell and spigot. The joint construction shall be suitable for at least 250-psi water service and, regardless of type, shall be designed to be self-centering. The bells and spigots shall have a smooth close sliding fit at the self-centering surface, and the joint shall be capable of either symmetrical or asymmetrical joint closure and shall remain watertight under all conditions of water service.

B. The joint assemblies shall be so formed and accurately manufactured that when the pipes are drawn together in the trench they shall form a continuous watertight conduit with smooth and uniform interior surface and shall provide for a slight movement of any pipe in the pipeline due to contraction, settlement or lateral displacement.

C. The maximum tolerances permitted in the construction of the joint shall be that stated in the pipe manufacturer's design as approved, but in no case shall the tolerances exceed those required in the applicable AWWA Standard.

D. The CONTRACTOR shall furnish a detail drawing of joints to be used, for approval, one week prior to the submittal of his Proposal. This detail drawing shall show all pertinent details, dimensions and tolerances. Joints may be furnished only by a manufacturer who has furnished pipe with joints of similar design for comparable working pressure that have been in successful service for a period of at least five years. The CONTRACTOR shall also furnish a list of installations on which a similar joint has been successfully used, showing pipe diameter, wall thickness and working pressure or field test pressure. Once approval is given for a joint, it will not be necessary to submit details of the joint for subsequent projects unless there is a change in the joint.

2.9 FLANGES

A. Flanges in the line and for outlets of sizes and at locations shown on the Drawings shall meet the requirements of AWWA C207, Class D. Flanges may be either ring type flanges or hub type flanges, but all flanges supplied must be of the same type and class.

B. The machined faces of all flanges shall be shop-coated with rust-preventive compound. Edges and back faces of attached flanges and blind flanges shall be shop-coated with a primer compatible with the application of the final field coating. The inside of blind flanges shall be epoxy coated in accordance with AWWA C210.

C. Flange details shall be submitted with Shop Drawings.

D. Blind flanges shall be in accordance with AWWA C207.

E. Bolt holes in all flanges shall straddle field vertical centerline.

F. Insulated flanges shall have bolt holes 1/4-inch diameter greater than the bolt diameter.

G. Nozzles or outlets shall have 1/4-inch minimum wall thickness.

2.10 GASKETS FOR FLANGES

A. Gaskets shall be 1/8-inch ring-type Garlock No. 3200 compressed non-asbestos sheet packing or approved equal.

B. Insulating gaskets shall be JM Red Devil Type E full-face gasket or approved equal.

2.11 INSULATING FLANGE SETS

A. Insulating flange sets shall be provided where shown on the Drawings. Each insulating flange set shall consist of an insulating gasket, insulating sleeves and washers and a steel washer.

B. Insulating sleeves and washers shall be one piece when flange bolt diameter is 1 1/2-inch or smaller and shall be made of acetal resin. For bolt diameters larger than 1 1/2-inch, insulating sleeves and washers shall be two-piece and shall be made of polyethylene or phenolic. Steel washers shall be in accordance with ASTM F 436.

2.12 FLANGE BOLTS

A. All thread studs shall be used on all valve flange connections and shall be in accordance with ASTM A 307, Grade B, with heavy hex nuts.

B. Machine bolts may be used on all other flanged connections and shall be in accordance with ASTM A 307, Grade A, with hex nuts.

C. Studs and bolts shall extend through the nut a minimum of 1/4-inch.

2.13 BOLTED SLEEVE-TYPE COUPLINGS

A. The ends of the pipe, where required or shown, shall be prepared for bolted sleeve-type couplings, Dresser, Baker, Rockwell or Romac. See SECTION 15124 – BOLTED SLEEVE TYPE COUPLINGS, HIGH DEFLECTION FITTINGS, FLANGE ADAPTERS AND FLEXIBLE CONNECTORS. Plain ends for use with couplings shall be smooth and round for a distance of 12-inches from the ends of the pipe, with outside diameter not more than 1/64-inch smaller than the nominal outside diameter of the pipe. The center sleeve shall be tested by cold-expanding a minimum of 1% beyond the yield point to proof-test the weld to the strength of the parent metal. The weld of the center sleeve shall be subjected to air test for porosity. The inside of the sleeve shall be coated with epoxy in accordance with AWWA C210.

B. The end rings shall be single-piece contoured mill section welded and cold-expanded as required for the center sleeves. They shall be of sufficient strength to accommodate the number of bolts necessary to obtain adequate gasket pressures without excessive rolling. The shape of the end ring shall be of such design as to provide positive confinement of the gasket.

C. Gaskets shall rubber-compound material that will not deteriorate from age or exposure to air under normal storage or use conditions. The rubber in the gasket shall meet the following Specifications:

1. Color - Jet Black
2. Tensile Strength - 1000 psi
3. Surface - Non-blooming
4. Minimum Durometer Hardness - 74± 5
5. Elongation - 175% Minimum

D. The gaskets shall be immune to attack by impurities normally found in water. All gaskets shall meet the requirements of ASTM D 2000, AA709Z, meeting Suffix B13 Grade 3, except as noted above.

E. Where insulating couplings are required, both ends of the coupling shall have a wedge-shaped gasket which assembles over a rubber sleeve of an insulating compound in order to obtain insulation of all coupling metal parts from the pipe.

2.14 SPECIALS AND FITTINGS

A. Unless otherwise shown on the Drawings, all specials and fittings shall conform to the dimensions of AWWA C208. Pipe material used in fittings shall be of the same material and minimum thickness as the pipe. The minimum radius of elbows shall be 2.5 times the pipe diameter and the maximum miter angle on each section of the elbow shall not exceed 11 1/4 degrees. Fittings shall be equal in pressure design strength and shall have the same lining and coating as the abutting pipe. Specials and fittings, unless otherwise shown on the Drawings, shall be made of segmentally welded sections from hydrostatically tested pipe, with ends to mate with the type of joint or coupling specified for the pipe.

B. Specials and fittings that cannot be mechanically lined and coated shall be lined and coated by hand-application, using the same materials as are used for the pipe and in accordance with the applicable AWWA Standards. Coating and lining applied in this manner shall provide protection equal to that specified for the pipe. Fittings may be fabricated from pipe that has been mechanically lined and/or coated. Areas of lining and coating that have been damaged by such fabrication shall be repaired by hand-applications in accordance with applicable AWWA Standards.

C. Access manholes with covers shall be the diameter as detailed on the Drawings.

D. All threaded outlets shall be forged steel suitable for 3000-psi service, Vogt or approved equal.

E. Moderate deflections and long radius curves may be made by means of beveled joint rings, by pulling standard joints, by using short lengths of pipe or a combination of these methods. The maximum total allowable angle for beveled joints shall be 5 degrees per pipe joint. The maximum allowable angle for pulled joints shall be in accordance with the manufacturer's recommendations or the angle which results from a 3/4-inch pull out from normal joint closure, whichever is less. All deflections or fabricated angles shall fall on the alignment. The chord produced by deflecting the pipe shall be no further than six inches from the alignment shown on the Drawings.

F. The laying schedule angle points shall meet the angle points as shown on the Drawings in the horizontal direction. The laying schedule for vertical angle points shall meet the angle points as shown on the Drawings where interference is critical.

2.15 PROTECTION OF PIPE LINING

A. The manufacturer shall provide a polyethylene or other suitable bulkhead on the ends of the pipe and on all special openings to prevent drying out of the lining. All bulkheads shall be substantial enough to remain intact during shipping until the pipe is installed.

B. The CONTRACTOR shall be fully liable for the cost of replacement or repair of pipe which is damaged.

2.16 CLOSURES AND CORRECTION PIECES

A. Closures and correction pieces shall be provided as required so that closures may be made due to different headings in the pipe laying operation and so that correction may be made to adjust the pipe laying to conform to pipe stationing shown on the Drawings.

B. The locations of correction pieces and closure assemblies are shown on the Drawings if required. Any change in location or number of said items shall be approved by the ENGINEER.

2.17 MARKINGS

A. The CONTRACTOR shall legibly mark all pipes and specials in accordance with the laying schedule and marking diagram.

B. Each pipe shall be numbered in sequence and this number shall appear on the laying schedule and marking diagram in its proper location for installation.

C. All special pipe sections and fittings shall be marked at each end with top field centerline. The word "top" shall be painted or marked on the outside top spigot end of the sections.

2.18 STRUTTING

A. Adequate strutting shall be provided on all specials, fittings and straight pipe, to avoid handling, storage, hauling and installation damage to the pipe coating and lining.

B. The strutting shall be placed as soon as practicable after the mortar lining has been applied and shall remain in place while each pipe is loaded, transported, unloaded, installed and backfilled at the jobsite.

2.19 ALLOWABLE DEFLECTION

A. The allowable deflection shall be 0.0225 x ID.

2.20 LAYING LENGTHS

A. Maximum pipe laying lengths shall be 45 feet with shorter lengths provided as required by Drawings, alignment and profile.

2.21 OFFSET TOLERANCES

A. For pipe wall thicknesses of 3/8-inch or less, the maximum radial offset (misalignment) for submerged arc and gas metal arc welded steel pipe shall be 0.1875 times the pipe wall thickness or 1/16-inch, whichever is larger.

B. For pipe wall thicknesses greater than 3/8-inch, the maximum radial offset shall be 0.1875 times the pipe wall thickness or 5/32-inch, whichever is smaller.

2.22 MISCELLANEOUS

A. All exposed metal surfaces except flanges shall be coated with the same material provided for the main line pipe.

2.23 PREFABRICATED MULTI-LAYER COLD APPLIED TAPE COATING

A. General

1. Except as described below, the coating system for straight-line pipe shall be in accordance with AWWA C214.
2. The system shall consist of at least four layers consisting of the following:

a. Primer layer
b. Inner layer tape - corrosion protective tape (20 mils) with black exterior
c. Outer layer tape - mechanical protective tape (30 mils) with white exterior
d. Outer layer tape - mechanical protective tape (30 mils) with white exterior

3. The total thickness of the tape coating shall be at least 80 mils.

B. Coating Repair

1. Coating repair shall be made using tape and primer conforming to AWWA C209, Type II.
2. The tape and primer shall be completely compatible with the tape system used for straight-line pipe.
3. When visual inspection shows a portion of the tape-wrap system has sustained physical damage, the damaged areas shall be subjected to an electrical holiday test of 6,000 to 7,000 volts.
4. Following repair of the damaged area, if the holiday test indicates a holiday still exists, the inner wrap shall be exposed and the exposed area shall be wiped clean with xylol solvent, or equal, and the area coated with tape primer. A patch of 35-mil thick cold-applied tape of sufficient size to cover the damaged area, plus a minimum lap of two inches in all directions, shall then be applied. The patched area shall again be tested for holidays. If none are detected, a second layer of 35-mil thick tape shall then be applied over the first patch. The second layer of tape shall overlap the first layer a minimum of two inches in all directions.
5. When the area tests showing no holiday, a notation shall be applied to the area indicating the test is satisfactory.

C. Coating of Fittings and Specials

1. General

a. Fittings and specials which cannot be machine coated in accordance with Part A shall be coated in accordance with AWWA C209.
b. Prefabricated tape shall be Type II and shall be completely compatible with the tape system used for straight-line pipe.
c. The system shall consist of three layers consisting of the following:

(1) Primer layer
(2) Inner layer tape - corrosion protective tape (35 mils)

(3) Outer layer tape - corrosion protective tape (35 mils)

d. The total thickness of the tape coating shall be at least 70 mils.

2. Coating Repair

a. Coating repair for fittings and specials shall be in accordance with the procedure described in Part B.

2.24 COAL-TAR ENAMEL COATING

A. Material

1. The coal-tar enamel coating shall be as specified in AWWA C203.
2. The provisions of the Specification given above shall be extended to include the following items:

a. Blasting
b. Priming
c. Coal-tar enameling
d. Fibrous glass wrapping
e. Coal-tar enameling (second coat)
f. Fibrous glass or felt wrapping
g. Whitewashing, latex painting or kraft wrapping

3. Items a., b. and c. shall be performed in accordance with AWWA C203; Item d. shall consist of fibrous glass mat 0.018 inches thick in accordance with AWWA C203, Appendix A placed in the enamel while the enamel is hot.
4. Item e. shall consist of a coating of enamel applied in accordance with AWWA C203.

B. Special Handling

1. It shall be the responsibility of the manufacturer of coal-tar enamel coated steel pipe to prevent damage of coal-tar enamel coating which might be caused by handling and/or storage of the completed pipe at low temperature.
2. In no case shall coal-tar enamel coated steel pipe be handled when the ambient air temperature is below 0° F. When the ambient air temperature is between 0° F. and 25° F., the pipe may be handled, provided the pipe is heated to a temperature of 25° F., as approved by the ENGINEER.
3. In no case shall coal-tar enamel coated steel pipe be transported when the ambient air temperature is below 25° F. When the ambient air

temperature is between 25° F. and 30° F., the pipe may be transported, provided special padded supports are used to absorb and minimize impact, as approved by the ENGINEER.

PART 3 EXECUTION

3.1 HANDLING AND STOCKPILING PIPE

A. All pipes, fittings, etc. shall be carefully handled and protected against damage to lining and coating, impact shocks and free fall. All pipe handling equipment shall be approved by the ENGINEER. Pipe shall not be placed directly on rough ground, but shall be supported in an approved manner which will protect the pipe against injury whenever stored at the trench site or elsewhere. No pipe shall be installed where the coating or lining shows cracks that may be harmful as determined by the ENGINEER. Such damaged coating or lining shall be repaired to the satisfaction of the ENGINEER, or a new undamaged pipe shall be furnished and installed at no expense to the OWNER. The pipe shall be handled by use of wide slings and padded cradles or of other suitable material designed and constructed to prevent damage to the pipe coating. The use of chains, hooks or other equipment which might injure the pipe coating will not be permitted. All other pipe handling equipment and methods shall be approved by the ENGINEER.

B. Stockpiled pipe shall be supported on sand or earth berms free of rock exceeding three inches in diameter. The pipe shall not be rolled and shall be secured to prevent accidental rolling.

C. The CONTRACTOR shall check the location of struts, and if necessary to prevent pipe deflections in excess of those shown in Section 2.18, the CONTRACTOR shall relocate the struts or provide additional struts to prevent such deflections and to maintain the pipe in a round condition.

D. Following completion of backfilling and removal of struts, the ENGINEER will check the pipe for deflection and where excessive deflection occurs, the CONTRACTOR shall remove the earth cover and side fill material, re-round the pipe by strutting and replace the pipe zone backfill to limit deflection to that specified in Section 2.18.

E. All pipe damaged while in the custody of the CONTRACTOR shall be repaired or replaced, as determined by the ENGINEER, by the CONTRACTOR at no additional expense to the OWNER.

F. While laying tape coated or coal-tar enamel coated steel pipe, the pipe shall not be rolled or skidded when it is in contact with the ground at any point. Workers will be permitted to walk on tape or coal-tar enamel coatings only when necessary

and shall wear shoes with rubber composition soles when walking on the pipe. The CONTRACTOR shall furnish a pipe coating flaw detector to the ENGINEER to aid in the inspection of the tape coating or coal-tar enamel coating. The CONTRACTOR shall check the location of struts, and if necessary to prevent pipe deflection shown in Section 2.18, the CONTRACTOR shall relocate the struts or provide additional struts to prevent such deflections and to maintain the pipe in a round condition.

3.2 PREPARATION

A. The CONTRACTOR shall inspect each pipe and fitting to insure that there are no damaged portions of the pipe. The CONTRACTOR shall remove or smooth out any burrs, gouges, weld splatter or other small defects prior to laying the pipe.

B. Before placement of pipe in the trench, each pipe or fitting shall be thoroughly cleaned of any foreign substance which may have collected thereon and shall be kept clean at all times thereafter. For this purpose, the openings of all pipes and fittings in the trench shall be closed during any interruption to the work.

3.3 PIPE LAYING

A. Each section of pipe shall be laid to line and grade on firm bearing for the full length of the section except at sling holes and at holes for making up field joints. Excavation shall be made as needed outside the normal trench section at field connection operations and for application of coating on field joints. No field openings shall be permitted to be made on the pipe without the written consent of the ENGINEER.

B. Pipe shall be laid directly on the imported bedding material. No blocking will be permitted, and the bedding shall be such that it forms a continuous, solid bearing for the full length of the pipe. Excavations shall be made as needed to facilitate removal of slings after the pipe is laid. Bell holes shall be formed at the ends of the pipe to prevent point loading at the bells or couplings. Excavation shall be made as needed outside the normal trench section at field joints to permit adequate access to the joints for field connection operations and for application of coating on field joints.

C. When the pipe is being laid, it shall be turned and placed where possible so that any slightly damaged portion will be on top. The damaged area shall be repaired for the protection of any exposed steel. All damaged areas shall be repaired using materials and methods approved by the ENGINEER.

D. Each section of pipe shall be laid in the order and position shown on the laying schedule. In laying pipe, it shall be laid to the set line and grade within

approximately one inch, plus or minus. On grades of zero slope, the intent is to lay to grade.

E. Where necessary to raise or lower the pipe due to unforeseen obstructions or other causes, the ENGINEER may change the alignment and/or the grades. Such change shall be made by the deflection of joints, by the use of bevel adapters or by the use of additional fittings. However, in no case shall the deflection in the joint exceed the maximum deflection recommended by the pipe manufacturer. No joint shall be misfit any amount which, in the opinion of the ENGINEER, will be detrimental to the strength and water tightness of the finished joint. In all cases, the joint opening, before finishing with the protective mortar inside the pipe, shall be the controlling factor.

F. Except for short runs which may be permitted by the ENGINEER, pipes shall be laid uphill on grades exceeding 10%. Pipe which is laid on a downhill grade shall be blocked and held in place until sufficient support is furnished by the following pipe to prevent movement. All bends shall be properly installed as shown on the Drawings.

G. Pipe struts shall be left in place until backfilling operations have been completed. After the backfill has been placed, the struts shall be removed and shall remain the property of the CONTRACTOR.

3.4 PROTECTION OF APPURTENANCES

A. Where the joining pipe is tape-coated or coal-tar enamel coated, buried appurtenances such as butt straps, closure pieces, nozzles, etc. shall be coated with cold-applied tape in accordance with Section 2.22.

3.5 INSTALLATION OF VALVES

A. See SECTION 15104 – FLANGED RUBBER SEATED BUTTERFLY VALVES – CLASS 150B and SECTION 15109 – 3-INCH THROUGH 12-INCH GATE VALVES – 150 POUND CLASS, as applicable.

B. All valves shall be handled in a manner to prevent any injury or damage to any part of the valve. All joints shall be thoroughly cleaned and prepared prior to installation. The CONTRACTOR shall adjust all stem packing and operate each valve prior to installation to insure proper operation.

C. All buried valves shall be coated and protected in accordance with Section 3.04, except that valves installed in dialectically coated pipelines shall be double-wrapped with tape in accordance with Section 3.09 B.

D. All valves shall be installed so that the valve stems are plumb and in the location shown on the Drawings.

3.6 FROZEN FOUNDATION

A. No pipe shall be installed upon a foundation into which frost has penetrated or at any time when the ENGINEER determines that there is a danger of the formation of ice or penetration of frost at the bottom of the excavation.

B. No pipe shall be laid unless it can be established that the trench will be backfilled before the formation of ice and frost occurs.

3.7 WELDED JOINTS

A. General

1. Field welded joints shall be in accordance with AWWA Standard C206.
2. Where exterior welds are called for, adequate space shall be provided for welding and inspection of the joint.
3. In laying welded steel pipe with buttstrap or lap joints, pipe deflection shall be limited to that which will produce a minimum lap of 1 1/2-inches and which will not cause a weld to be closer than 3/4-inch to the nearest tangent of a bell radius.
4. Buttstraps, where required, shall be a minimum of 6-inches wide, the same thickness as the pipe wall and shall provide for a minimum of 3/4-inch lap at each pipe joint.
5. Prior to the beginning of the welding procedure, any tack welds used to position the pipe during laying shall be removed. Any annular space between the faying surfaces of the bell and spigot shall be equally distributed around the circumference of the joint by shimming, jacking or other suitable means.
6. Immediately following pipe laying, the joints shall be finish-welded and the exterior joint spaces coated in accordance with these Specifications. The pipe shall then be backfilled to at least one foot above the top of the previously laid pipe except for the last 100 feet, the joints of which shall be left open for subsequent field welding and coating.
7. After completion of the welding of the joint, the joint will be visually inspected. All double welded joints shall be air tested in accordance with AWWA C206. All defects shall be removed, re-welded and retested.
8. Where more than one pass is required, each pass except the first and the final one, shall be peened to relieve shrinkage stresses; and all dirt, slag and flux shall be removed before the succeeding bead is applied.

9. Following testing of the joint, the exterior joint spaces shall be coated in accordance with these Specifications, after which backfilling may be completed.

B. Procedures

1. All welding procedures used to install pipe shall be prequalified under provisions of AWS D1.1.
2. Welding procedures shall be required for field attachments and field welded joints.
3. Full and complete information regarding location, types, size and extent of all welds shall be clearly shown on the Shop Drawings. The drawings shall clearly distinguish between shop and field welds.
4. Joints or groups of joints in which welding sequence is especially important or technique be carefully controlled to minimize shrinkage stresses and distortion shall be so noted.
5. Shop drawings shall specify the groove depths applicable for the effective throat required for the welding process. Shop drawings shall clearly indicate by welding symbols or sketches the details of the welded joints and the preparation of parent metal required to make them.
6. Joints meeting requirements of AWS D1.1, Section 2, shall be so noted on Shop Drawings. Joints not meeting this requirement shall be qualified as outlined in AWS D1.1, Section 5.

C. Welder Qualifications

1. All welding shall be done by skilled welders, welding operators and tackers who have had adequate experience in the method and materials to be used.
2. All welders, welding operators and tackers shall be qualified under the provisions of AWS D1.1. Welders shall be qualified by a local approved independent testing agency not more than six months prior to commencing work on the pipeline. Machines and electrodes similar to those used in the work shall be used in qualification tests. Welders performing field welds for welded joints shall be qualified using test position 6G. All welding tests for qualification shall be done in the presence of the testing agency or in the presence of a certified welding inspector appointed by the testing agency. The CONTRACTOR shall furnish all materials and bear the expense of qualifying welders.

D. Joints

1. The pipe ends shall be cut straight on joints where buttstraps are used for realignment, adjustment or deflection, and fillet welds shall be made as shown on the Drawings.

2. Unless double fillet welds are shown on the Drawings, field welded lap joints may, at the CONTRACTOR's option, be made on either the inside or the outside of the pipe.

3.8 JOINT COATING AND LINING

A. Coal-Tar Enamel or Tape Coated Steel Pipe

1. Joints for tape coated or coal-tar enamel coated pipe shall be primed and wrapped with two thicknesses of 12-inch wide elastomeric joint tape, Type II per AWWA C209. The total thickness of the tape wrap shall be at least 70 mils and shall be installed free of wrinkles with all laps bonded. All primer and joint tape shall be compatible with the line pipe coating.
2. All tape-coated joints will be tested in the presence of the ENGINEER with an electrical Holiday detector capable of at least a 12,000-volt output, furnished by the CONTRACTOR. The tests shall be made using a voltage of 6,000 to 7,000 volts. Any holidays found shall be repaired by the CONTRACTOR at no expense to the OWNER.

B. Joint Lining

1. The joint recess shall be thoroughly wiped clean and all water, loose scale, dirt and any other foreign material shall be removed from the inside steel surface of the pipe.
2. Material used for the mortar lining shall conform to AWWA C205, Appendix A.
3. At welded joints, or where otherwise indicated on the Drawings, the CONTRACTOR shall provide 2 x 4 WO.65 x WO.65 self-furred welded wire fabric, tack welded to the inside of the joint prior to application of the mortar. With approval of the ENGINEER, Probond or equal may be used in the place of the welded wire fabric.
4. The mortar shall be applied with a uniform pressure producing a smooth surface and a uniform thickness of lining to match the shop-applied mortar lining. At no point shall there be an indentation or projection of the mortar which exceeds 1/16-inch.
5. After the mortar has set sufficiently, clear seal compound "Protex", or approved equal, shall be applied to the joint lining.

3.9 INSTALLATION OF FLANGED JOINTS

A. Before the joint is assembled, the flange faces shall be thoroughly cleaned of all foreign material with a power wire brush. The gasket shall be centered and the connecting flanges drawn up watertight without unnecessarily stressing the flanges. All bolts shall be tightened in a progressive diametrically opposite sequence and torqued with a suitable, approved and calibrated torque wrench. All clamping torque shall be applied to the nuts only.

B. After the flange has been properly assembled, the joint shall be thoroughly cleaned of all foreign material and then primed by brush or by spraying with primer in accordance with AWWA C209. Following application of the primer, a joint wrap tape shall be applied to buried flanges in conformance with AWWA C209, Type II, where the joining pipe is coated with cold-applied tape or coal-tar enamel.

3.10 INSULATED JOINTS

A. Insulated joints and appurtenant features shall be made by the CONTRACTOR as indicated on the Drawings.

B. The CONTRACTOR shall exercise special care when installing these joints to prevent electrical conductivity across the joint. After the insulated joint is completed, an electrical resistance test will be performed by the ENGINEER. Should the resistance test indicate a short circuit, the CONTRACTOR shall remove the insulating units to inspect for damages, replace all damaged portions and reassemble the insulating joint at no extra cost to the OWNER. The insulated joint shall then be re-tested to assure proper insulation.

3.11 BOLTED SLEEVE-TYPE COUPLINGS

A. When installing bolted sleeve-type couplings, care shall be taken that the connecting pipe ends, couplings and gaskets are clean and free of all dirt and foreign matter with special attention being given to the contact surfaces of the pipe, gaskets and couplings.

B. The couplings shall be assembled and installed in conformance with the recommendation and instruction of the coupling manufacturer.

C. Wrenches used in bolting couplings shall be of a type and size recommended by the coupling manufacturer. Coupling bolts shall be tightened so as to secure a uniform annular space between the end rings and the body of the pipe with all bolts tightened approximately the same amount. Diametrically opposite bolts shall be tightened progressively and evenly. Final tightening shall be done with a suitable, approved and calibrated torque wrench set for the torque recommended by the coupling manufacturer. All clamping torque shall be applied to the nut only. Upon completion of the coupled joint, the coupling and bare metal of the

pipe shall be cleaned, primed and protected in accordance with the requirements of Section 3.08 A.

D. The center sleeve and one end ring of non-insulated bolted sleeve-type couplings shall be bonded for electrical conductivity to both ends of the connecting pipes.

E. For insulated bolted sleeve-type couplings, the center sleeve and one end ring shall be bonded to the connecting pipe end opposite the insulating rubber sleeve.

3.12 PIPE PROTECTION

A. When pipe laying is not in progress, the ends of the pipeline, all special openings and all pipe not yet laid shall be kept closed with suitable bulkheads to prevent unauthorized access by persons, animals, water or any undesirable substance.

B. The bulkheads shall be so designed to prevent drying out of the interior of the pipe.

C. The CONTRACTOR shall introduce water into the pipe to keep the mortar moist where moisture has been lost due to damaged bulkheads. At all times, means shall be provided to prevent the pipe from floating.

3.13 CORROSION CONTROL

A. Corrosion mitigation and testing materials, such as magnesium anodes, reference electrodes and test lead wire shall be furnished and installed by the CONTRACTOR, as noted in the Drawings

3.14 PIPE CLEANUP

A. As pipe laying progresses, the CONTRACTOR shall keep the pipe interior free of all debris.

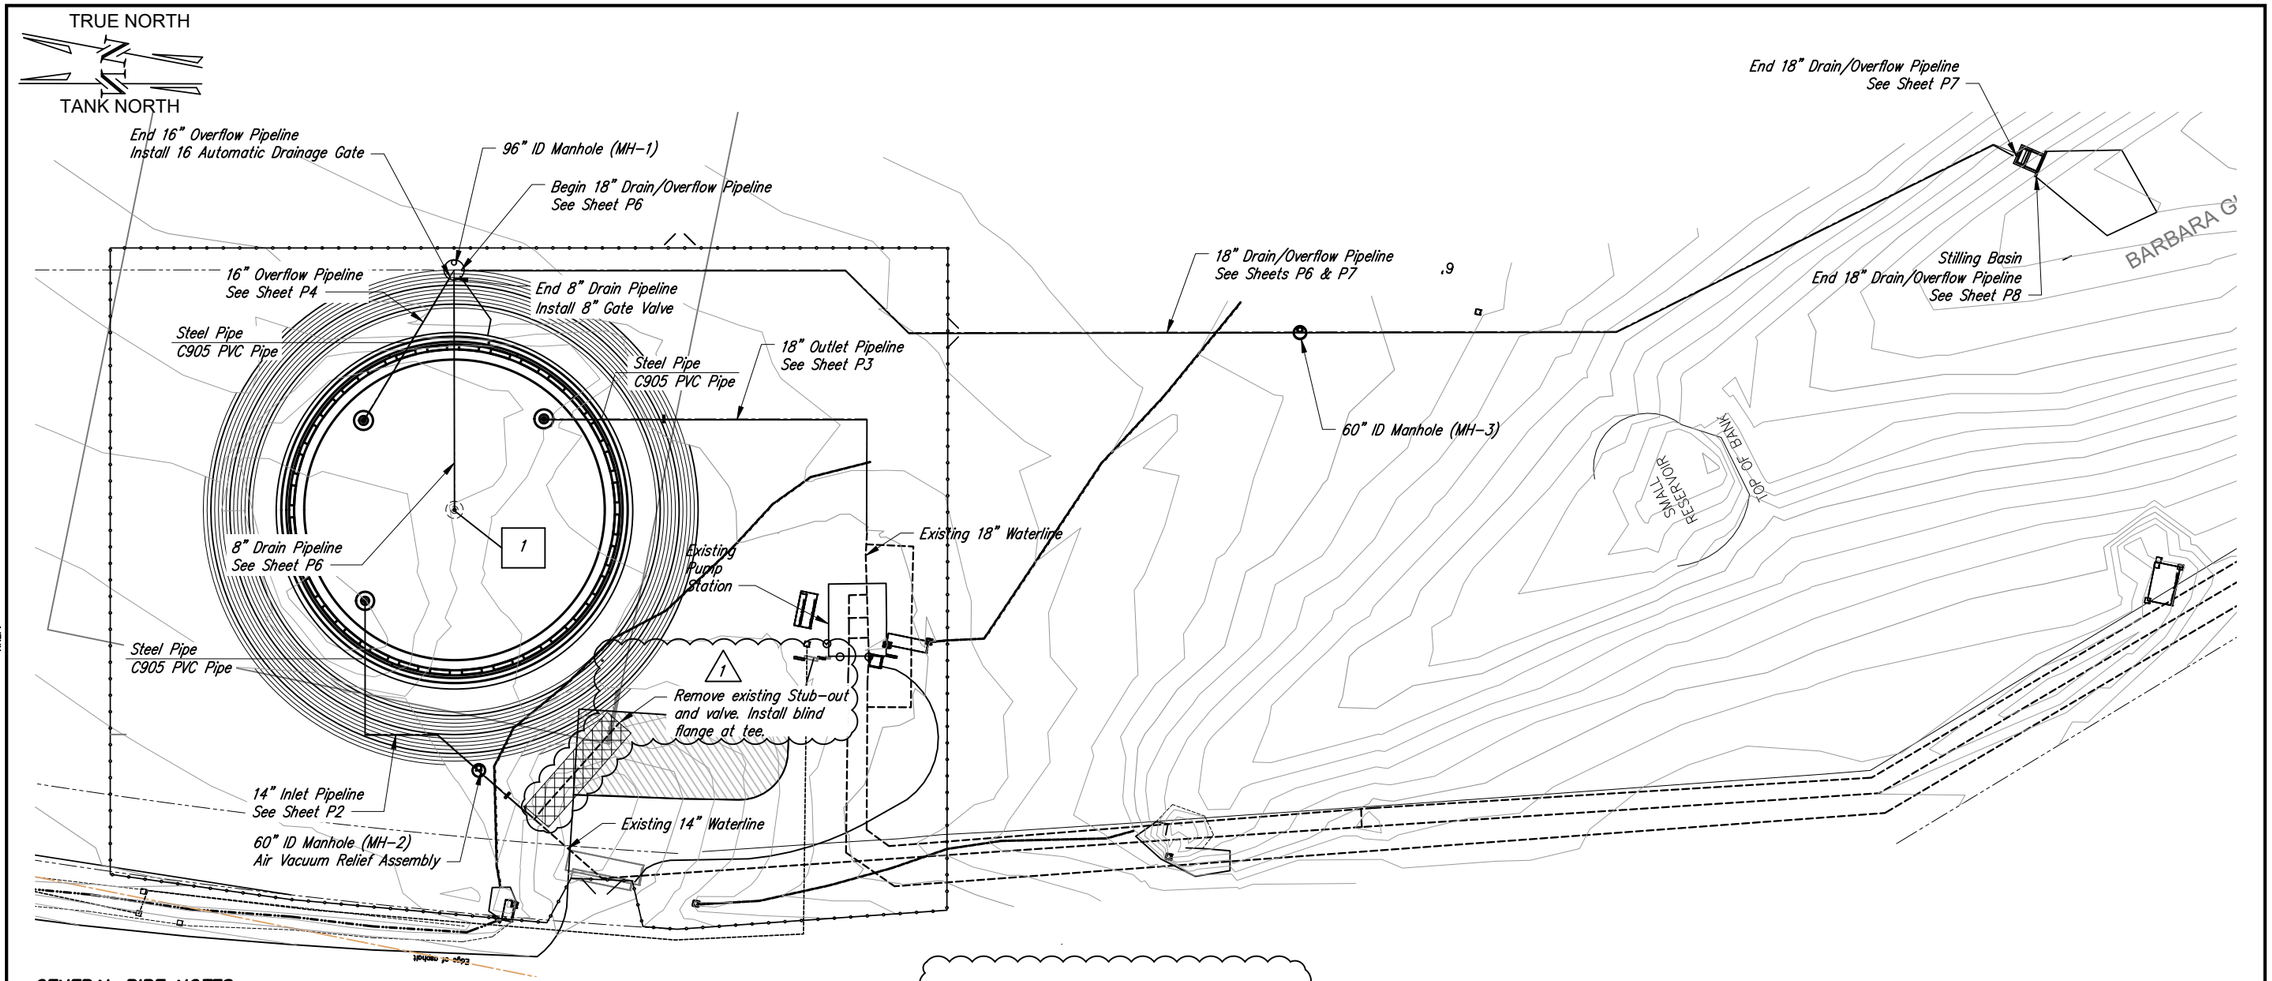
B. The CONTRACTOR shall completely clean the interior of the pipe of all sand, dirt, mortar splatter and any other debris following completion of pipe laying, pointing of joints and any necessary interior repairs prior to testing and disinfecting the completed pipeline.

3.15 HYDROSTATIC TEST AND CHLORINATION OF WATER PIPES

A. General

1. The CONTRACTOR shall field pressure test all conduits and piping within this Contract to the working pressure listed on the Drawings.

B. Testing and Chlorination of Pipelines



1. The CONTRACTOR shall furnish chemicals for chlorination of the pipeline and will feed these chemicals into the water used in filling the pipe for testing.
2. Chlorination of the finished pipeline will be done simultaneously with the hydrostatic testing.
3. Before filling the pipe with water for testing or chlorination, the pipe shall be thoroughly cleaned of all debris and foreign materials to the satisfaction of the ENGINEER. No hydrostatic test shall be made on any portion of the pipeline until all field placed concrete has had seven days in which to cure.
4. When testing, the pipeline will be filled by the CONTRACTOR at a rate which will not cause any surges or exceed the rate at which the air can be released through the air valves at a reasonable velocity, and all the air within the pipe shall be properly purged. All pipe shall be allowed to stand under moderate pressure at least 24 hours to allow the pipe to absorb moisture before the test period is begun.
5. **The CONTRACTOR is required to furnish the water (in the event the transmission pipeline project is incomplete at the time of testing tank site pipelines)**, pump, and calibrated meter for testing at locations designated by the ENGINEER. The CONTRACTOR shall furnish all labor, tools, equipment, necessary bulkheads, all miscellaneous materials and do everything necessary to facilitate filling of the pipelines, maintaining the required test pressures and blowing off the pipelines after testing.
6. The CONTRACTOR, at his own expense, shall do any excavation, backfill and replacement of pavement necessary to locate and repair leaks or other defects which may develop under test. However, any section of the pipe which indicates defective material furnished by the OWNER shall be repaired by the CONTRACTOR at the expense of the OWNER. Any and all joints made in the field shall be the responsibility of the CONTRACTOR.
7. The amount of leakage in the pipeline, including all appurtenant parts, when tested under the pressures indicated shall be zero.

3.16 PLASTIC MARKER TAPE

A. Unless otherwise indicated in the specifications of Drawings plastic marker tape shall be placed in the trench backfill approximately 18 inches below grade.

B. The tape shall be placed horizontally to readily enable reading of the tape above all pipe.

END OF SECTION

GENERAL PIPE NOTES:

1. The Contractor and pipe fabricator are responsible for the AWWA C200 welded-steel pipe, and AWWA C900 and C905 PVC pipe design. The responsibility includes the design of pipe joints, such as butt-strap, and bell and spigot joints. Bolted-steel coupling joints are not permitted under the water storage tank(WST). Steel pipe joints other than welded joints shall be bonded. All pipe joints shall be restrained pipe joints throughout the project. The steel pipe shall have a thickness $\geq$ 0.25-inches. Excepting the inlet and overflow risers inside the WST the AWWA C200 welded-steel pipe shall have a cement mortar lining and AWWA C114 tape coating. Tape coating shall not be used on pipelines inside the WST, but the exposed steel pipe shall be painted. See drawings for coatings at slab penetrations and inlet and overflow risers.

   The pipe design shall consider construction loads, such as ready-mixed concrete trucks, concrete pumpers, excavation and backfill earthwork equipment, that will occur between pipeline placement and completion of the WST. The pipe fabricator and Contractor are jointly responsible for the pipeline wall thickness design that considers interim construction and final condition loads.
2. 1/4-inch thick wall pipe with a 3/8-inch cement-mortar lining was used for the calculations of elevations.
3. Exterior surface of all pipe below bottom of slab to be Commercial Blast Cleaned per SSPC-SP-6, primed and wrapped with 20 mil innerwrap and 2 wraps of 30 mil outerwrap per AWWA C 214.
4. Backfill entire trench width of pipeline under the tank floor slab using CLSM to 5'-0" beyond the tank wall footing and as required to meet pipe design wall thickness and deflection requirements The CLSM shall extend from 6" minimum below the pipe invert to 6" above top of pipe.
5. The Contractor shall provide means, such as temporary bulkheads, to permit pressure testing of the under-slab pipelines prior to slab concrete placement.
6. All steel pipe joints shall be bonded. Bonding only required on metallic to metallic joints (1)
7. All PVC pipe 12" and smaller shall be AWWA C900.
8. All PVC pipe 14" and larger shall be AWWA C905.
9. All Steel and PVC pipe joints shall be restrained.
10. Test pressure for all pipe will be 150 PSI.
11. Restrain across Bolted Sleeve Couplings. Provide rod lugs or restraint rings on pipe. See Sheet P12.

SCOPE

This report presents the results of our Geotechnical Investigation for the Sleeping Indian 1.5 MG Water Storage Tank planned northeast of the intersection of CO-93 and CO-72 in Arvada, Colorado (Fig. 1). The purpose of our investigation was to evaluate subsurface conditions and provide geotechnical design and construction criteria for the project. CTL | Thompson, Inc. entered into a Professional Engineering Services Agreement with Bates Engineering, Inc. signed August 1, 2018. This revision of the report updates details in the **FOUNDATION DRAINS** section and Figure 4.

This report is based on conditions found in our exploratory borings, results of field and laboratory tests, engineering analysis of field and laboratory data, and our experience. It contains descriptions of the subsurface conditions found in our exploratory borings, discussion of site development and foundation alternatives, and recommended design and construction criteria for site development, the water tank foundation, lateral earth pressures, and surface and sub-surface drainage. The recommendations presented in the report are based on our understanding of the construction as currently planned. If construction will differ from the descriptions herein, we should be contacted to review our recommendations and determine if revisions are needed. A brief summary of our conclusions and recommendations follows, with more detailed discussion and design criteria presented in the report.

SUMMARY OF CONCLUSIONS

1. Soils encountered in our borings generally consisted of 65 to 70 feet of clayey/silty sand, gravel, and cobbles over claystone bedrock. The sand and gravel is dense and non-expansive. The claystone is expansive but is deep and not likely to influence the performance of foundations.

2. We encountered groundwater during drilling at a depth of about 60 feet in one boring. When the holes were checked 8 or 18 days later, water was measured in all three borings at depths of 49 to 51 feet, or approximate elevations 6195 to 6196 feet. Groundwater is not expected to influence construction. Water levels may fluctuate seasonally and rise in response to precipitation, irrigation, and land-use changes.

3. We understand a 5-inch thick membrane slab that transitions monolithically to an 18-inch footing below the tank walls is planned to support the tank. Foundations should be designed for a maximum allowable bearing pressure of 5,000 psf. We expect cobbles and boulders larger than 6-inches will be found in the foundation excavation. To mitigate risk of point loads developing below the tank floor-slab and to provide a uniform subgrade we recommend 3 feet of the site soils be sub-excavated and processed to remove the large sizes before replacing the soils as compacted, moisture-conditioned fill. This is discussed in detail later in the report.

4. Below-grade walls should be designed and constructed to resist lateral earth pressures considering surcharges and impacts of sloping backfill around the tank. Backfill around the tank should be properly compacted to reduce surface infiltration and backfill settlements.

5. A foundation drain should be installed around the perimeter of the tank to control water from tank leakage, surface infiltration and hydrostatic pressure in the backfill. Below a working surface consisting of a minimum of 6-inches of CDOT Class 6 aggregate base course we recommend a woven separation fabric (Mirafi RS280i is suitable) over a drainage layer of ASTM C33 No. 57 or 67 crushed rock. A plastic geo-membrane to separate the drain gravel from the soils should be considered to channel water into the drain system but is not required (Fig. 4).

6. Positive surface drainage should be maintained around the tank at all times to reduce infiltration and the risk of wetting of foundation soils. Water should not be allowed to pond over or adjacent to the structure.

SITE CONDITIONS

The Sleeping Indian water tank site is located northeast of the intersection of CO-93 and CO-72 in Arvada, Colorado. Based on the Jefferson County Designated Dipping Bedrock Area Guide, the site lies within the dipping expansive bedrock zone. The site is surrounded by vacant land and CO-93 to the west and CO-72 to the south. There is an existing pump station present on the southwest part of the site. Existing utilities are present on the west and south portions of the site. Vegetation around the tank site consists of grasses and shrubs.

PROPOSED CONSTRUCTION

A water tank with a 1.5-million-gallon capacity is planned. The tank will be mostly buried, up to about 17 feet at the highest point. The bottom of the tank floor-slab and the bottom of footing are planned at elevations 6227.9 feet and 6228.1 feet, respectively. The top of the roof slab is planned at 6247.3 feet, leaving a few feet of the tank above grade in some areas. The tank will be about 137 feet in diameter (outer wall footing dimension) and about 20 feet in total height. We anticipate the tank foundation will be a monolithic 5-inch thick mat slab with a thickened perimeter ring supporting concrete walls. The tank roof will be supported by footings and columns on the slab.

INVESTIGATION

We investigated subsurface conditions on August 10 and August 20, 2018 by drilling and sampling three exploratory borings at the approximate locations shown on Fig. 1. Boring locations were staked by a representative of our firm referencing existing site features. Prior to drilling, we contacted the Utility Notification Center of Colorado and local sewer and water districts to identify locations of buried utilities. The borings were drilled to depths of 71 feet below existing

grades using a down-hole hammer (ODEX) inside 5-inch diameter (O.D.) casing powered by a truck-mounted drill rig. Bulk samples of air-discharged cuttings were obtained at 5 to 10-foot intervals. We also collected samples of the bedrock using a 2.5-inch diameter (O.D.) modified California barrel sampler driven by blows of a 140-pound automatic-hammer falling 30-inches. The boring locations and elevations were determined using a Leica GS18 GPS unit referencing the North American Vertical Datum of 1988 (NAVD88). Our field representative observed drilling, logged the strata encountered, obtained samples, and recorded the depth where groundwater was encountered. We installed slotted PVC pipe into the borings to allow for delayed groundwater measurements. Graphical logs of the exploratory borings are presented on Fig. 2.

Samples obtained during drilling were returned to our laboratory where they were examined by our engineers. Laboratory tests included dry density, moisture content, Atterberg limits, percent silt and clay-sized particles (passing No. 200 sieve), particle gradation analysis, hydrometer, unconfined compression, swell-consolidation, standard Proctor, and water-soluble sulfate concentration. Swell-consolidation tests were performed by wetting samples under approximate overburden pressures (i.e. the pressure exerted by the overlying soils). Laboratory test results are presented in Appendix A and summarized on Table A-I.

SUBSURFACE CONDITIONS

Subsoils encountered in our borings generally consisted of 65 to 70 feet of silty/clayey sand, gravel and cobble underlain by claystone bedrock. Some pertinent engineering characteristics of the soil and bedrock are described in the following paragraphs.

Sand and Gravel

Silty and clayey sand and gravel with cobbles and boulders dominated the substrata in the upper 65-70 feet of our borings. Based on observations during drilling and our experience in this area, the sand and gravel is medium dense to dense. Thirteen sand and gravel samples contained 15 to 25 percent silt and clay-size particles and 14 to 30 percent gravel size-particles. These results are finer than the natural deposit. The drilling technique pulverizes cobbles and boulders as it penetrates the material. Ten samples exhibited low plasticity with liquid limits between no limit and 29 and plasticity indices between no limit and 13. A standard Proctor test on one combined bulk sample of the upper 40 feet of material in TH-2 and TH-3 produced an optimum moisture content of 9 percent and a maximum dry density of 129 pcf. The sand and gravel is non-expansive.

Bedrock

We encountered claystone bedrock at depths of 65 to 70 feet in all three borings, or approximate elevations 6175 to 6180 feet. The bedrock is from the Cretaceous-age Pierre Shale and is steeply dipping. One claystone sample swelled 0.5 percent when wetted. Two samples contained 94 and 96 percent fines and exhibited high plasticity with liquid limits of 56 and 64 and plasticity indices of 30 and 40, respectively. One sample exhibited an unconfined compressive strength of 9,700 psf. The claystone is expansive but at depths unlikely to influence performance of the tank.

Groundwater

We encountered groundwater during drilling in TH-2 at a depth of about 60 feet below existing grade, or approximate elevation 6187 feet. When the holes were checked after drilling on August 28, 2018, water was measured in all three

at depths of 49 to 51 feet, or approximate elevations 6195 to 6196 feet. Groundwater is not expected to influence construction. Water levels may fluctuate seasonally and rise in response to precipitation, irrigation, and land-use changes.

Seismicity

The soil and bedrock are not expected to respond unusually to seismic activity. Based upon the results of our investigation, we judge the site classifies as Seismic Site Class C.

SITE DEVELOPMENT

Excavation

We believe the soils penetrated in our exploratory borings can be excavated with conventional, heavy-duty excavation equipment. We recommend the owner and the contractor become familiar with applicable local, state and federal safety regulations, including the current Occupational Safety and Health Administration (OSHA) Excavation and Trench Safety Standards. Based on our investigation and OSHA standards, we anticipate the sand and gravel will classify as Type C soil. Type C soil requires a maximum side slope inclination of 1½:1 (horizontal:vertical) for temporary excavations in dry conditions. Flatter slopes are required below groundwater or where seepage is present. The contractor's "competent person" is required to review excavation conditions and refer to OSHA standards when worker exposure is anticipated. Stockpiles of soils and equipment should not be placed within a horizontal distance equal to one-half the excavation depth, from the edge of the excavations. A professional engineer should design excavations more than 20 feet deep.

Fill and Backfill

The on-site soils are generally suitable for reuse as new fill, provided they are substantially free of debris, vegetation/organics, and other deleterious material. Soil particles larger than 3 inches in diameter should not be used for fill unless broken down. Cobbles up to 6 inches may be used in fill. Saturated soils should not be used.

Prior to fill placement, any debris, vegetation/organics or other deleterious materials should be substantially removed from areas to receive fill. The surface to be filled should be scarified to a depth of at least 8 inches, moisture-conditioned, and compacted to the criteria below. Subsequent fill should be placed in thin, loose lifts, moistened to within 2 percent of optimum moisture content, and compacted to at least 95 percent of standard Proctor maximum dry density (ASTM D 698). The placement and compaction of fill and backfill should be observed and tested by a representative of our firm during construction.

Water and sewer lines are often constructed beneath slabs and pavements. Compaction of utility trench backfill can have a significant effect on the life and serviceability of floor slabs, pavements and exterior flatwork. We recommend utility trench backfill be placed and compacted as outlined above. The placement and compaction of utility trench backfill should be observed and tested by a representative of our firm.

Our experience indicates fill and backfill can settle, even if properly compacted to the criteria provided above. Factors that influence the amount of settlement are depth of fill, material type, degree of compaction, amount of wetting, and time. The degree of compression of properly compacted fill under its own weight may be about 1 to 2 percent of the fill depth. Most of this settlement occurs during and soon after construction; for clay fill it may continue for a longer

period of time. Additional heave and/or settlement may occur after irrigation begins.

Sub-Excavation

Our investigation indicates cobbles and boulders greater than 6-inches may be present beneath the proposed tank. Cobbles of this size may create point-load conditions on the relatively thin tank floor-slab. This can cause damage and cracking of the slab. To mitigate risk of point-loads developing and provide more uniform support, we recommend sub-excavation of 3 feet below the tank footprint. A conceptual sub-excavation profile is presented on Fig. 3.

If only a few boulders larger than 6-inches are found within the tank footprint during excavation, they should be removed and replaced with site soils. If there are more boulders than can be reasonably removed one-by-one, we recommend sub-excavation proceed to a depth of 3 feet below the lowest slab elevation and replacement with moisture-conditioned, compacted material that has been sorted to remove cobbles and boulders larger than 6-inches. The minus 6-inch excavated soils can be used as moisture-treated fill in accordance with the criteria in Fill and Backfill. Our representative should observe and test compaction of fill during placement.

The bottom of the sub-excavated area should extend laterally at least 5 feet outside the tank footprint to ensure the foundation is constructed over moisture-conditioned, compacted fill. Special precautions should be taken for compaction of fill at corners, access ramps, and along the perimeters of the sub-excavation due to equipment access constraints. The contractor should have appropriate equipment to reach and compact these areas. Our representative should observe placement procedures and test compaction of the fill.

TANK FOUNDATION

We understand the desired foundation for the tank is a 5-inch thick membrane slab that transitions monolithically to a thickened footing below the tank wall. Expected loads are 10 k/ft for the wall and 150 kips for the columns. This foundation system is acceptable with the provisions discussed in this report. We estimate total and differential settlement will be less than 1-inch. Design and construction criteria for foundations are presented in the following paragraphs.

1. Footings should be constructed on suitable natural soils or 3 feet of moisture-conditioned, compacted fill. Soils loosened during foundation excavation or in the forming process should be removed and replaced as moisture-conditioned, well-compacted fill prior to placing concrete.

2. Footings should be designed for a maximum allowable soil pressure of 5,000 psf.

3. Footings should have a minimum width of 16 inches. Foundations for isolated columns should have minimum dimensions of 18 inches by 18 inches. Larger sizes may be required depending upon the loads and structural system used.

4. Exterior footings should be provided with at least 3 feet of cover for frost protection.

5. The completed excavations should be observed by a representative of our firm prior to placing the forms to confirm subsurface conditions are suitable for supporting footings.

6. Excessive wetting of foundation soils during and after construction can cause softening and settlement of foundation soils and result in footing or slab movements. Proper surface drainage around the building is critical to control wetting.

PIPE CONNECTIONS

Penetrations for piping and controls should be provided with flexibility or freedom that allows independent movement. The ability to withstand differential

movement of at least 1-inch should be considered when detailing connections and penetrations that are located at the tank floor. Wall backfill will settle with time after construction. Connections located in wall backfill areas above the tank floor should accommodate potential differential movement on the order of 1 to 2 percent of the height of fill below the utility.

BELOW GRADE WALLS

Below grade walls should be designed to resist lateral earth pressures. The amount of pressure on a wall is a function of the type of backfill, drainage conditions, slope of the backfill surface, and the allowable rotation of the wall. If the tank walls will be essentially rigid and unable to rotate to mobilize the strength of the backfill soils they should be designed for an “at rest” earth pressure condition. We recommend design for the “at-rest” earth pressure using an equivalent fluid density of at least 50 pcf. For walls that are free to rotate, a lower, “active” earth pressure calculated using 40 pcf fluid density can be used. A “passive” earth pressure of 450 pcf can be used to resist sliding and overturning. Passive design requires relatively more movement than active or at-rest pressures to generate the resistance. Passive resistance should only be used when movement is tolerable, and the soil is well compacted and will be not be removed. A coefficient of friction of 0.65 may be considered for resistance to sliding. Adequate safety factors should be applied to the above ultimate values.

The values presented above do not include surcharge pressures induced by traffic loads, loads from adjacent structures, seepage force, or hydrostatic pressure; these loads should be added to the equivalent fluid densities. A foundation drain, and gravel drainage layer should be installed below the tank as recommended in the **FOUNDATION DRAINS** section below.

FOUNDATION DRAINS

A typical foundation drain detail is provided on Fig. 4 for the tank to control water from tank leakage, surface infiltration and hydrostatic pressure in the backfill. We recommend the excavation surface be graded ½ percent or more to slope from the center of the tank to the perimeter drain. A rough textured 60-mil or thicker HDPE or equivalent moisture barrier can be placed over the trimmed and compacted subgrade, extending up the side of the excavation at least 2 feet. The moisture barrier is not required but should be considered as a means to direct leakage or seepage to the drain and reduce potential subgrade wetting. A 4-inch diameter SDR-35 perforated pipe (able to withstand high confining pressure) should be placed in the perimeter trench, leading to a protected outfall or a sump pit with a pump in a manhole. The perimeter drain should lead to a manhole so that it can be checked and pumped if necessary. The pipe should be placed in a layer of drainage material consisting of ASTM C33 No. 57 or 67 crushed rock to provide good drainage properties and stable subgrade. The gravel should be lightly compacted with a non-vibrating smooth drum roller. The drainage material should be covered with a woven geofabric such as Mirafi RS280i. The planned working surface of at least 6 inches of CDOT Class 6 aggregate base course can be placed on the geofabric to form the foundation subgrade.

Roof drainage should be designed to slope away from the tank and prevent ponding on the roof. Positive surface drainage should be maintained around the tank at all times to reduce infiltration and the risk of wetting of foundation soils. Water should not be allowed to pond over or adjacent to the structure.

CONCRETE

Concrete in contact with soil can be subject to sulfate attack. We measured a sulfate concentration of less than 0.01 percent in one sample from this site. Sulfate concentrations less than 0.1 percent indicate Class 0 exposure to sulfate attack for concrete in contact with subsoils, according to the American Concrete Institute (ACI) *Guide to Durable Concrete (ACI 201.2R-01)*. For this level of sulfate concentration, ACI indicates any type of cement can be used for concrete in contact with the subsoils. Superficial damage may occur to the exposed surfaces of highly permeable concrete, even though sulfate levels are relatively low. To reduce this risk and to resist freeze-thaw deterioration, the water-to-cementitious material ratio should not exceed 0.50 for concrete in contact with soils that are likely to stay moist due to surface drainage or ground water. Concrete should have a total air content of 6 percent ± 1.5 percent. We recommend all walls in contact with the subsoils be damp-proofed. A waterproofing membrane should reduce risk of moisture transmission through below-grade walls. The level of protection desired will depend on the level of performance desired. International Building Codes may control the required level of protection.

SURFACE DRAINAGE

Performance of foundations, flatwork, and other surface improvements is influenced by the moisture conditions existing within the foundation or subgrade soils. The risk of wetting the foundation and floor subgrade soils can be reduced by carefully planned and maintained surface grades and drainage. Excessive wetting before, during and/or after construction may cause movement of foundation and slabs-on-grade. We recommend the following precautions be observed during construction and maintained at all times after construction is completed.

1. Wetting or drying of open foundation and utility excavations should be avoided.

2. Positive drainage should be provided away from the tank. We recommend a minimum slope of at least 5 percent in the first 5 to 10 feet away from the foundations in landscaped areas. Paved surfaces should be sloped to drain away from the tank. A minimum slope of 1 percent is suggested; more slope is desirable.

3. Backfill around foundations should be moistened and compacted according to criteria presented in Fill and Backfill.

4. Roof drains should discharge beyond backfill zones or into appropriate storm sewer or detention area.

GEOTECHNICAL RISK

The concept of risk is an important aspect with any geotechnical evaluation, primarily because the methods used to develop geotechnical recommendations do not comprise an exact science. We never have complete knowledge of subsurface conditions. Our analysis must be tempered with engineering judgement and experience. Therefore, the recommendations presented in any geotechnical evaluation should not be considered risk-free. Our recommendations represent our judgement of those measures that are necessary to increase the chances that the structures will perform satisfactorily. It is critical that all recommendations in this report are followed during construction. Owners or property managers must assume responsibility for maintaining the structures and use appropriate practices regarding drainage and landscaping. Improvements after construction should be completed in accordance with recommendations provided in this report and may require additional soil investigation and consultation.

LIMITATIONS

Our borings were located to obtain a reasonably accurate picture of subsoil conditions below the tank. The borings are representative of conditions

encountered at the boring locations. Subsurface variations not indicated by our borings are possible.

The recommendations presented in this report are based on the construction as currently planned. Revisions in the planned construction could affect our recommendations. We should be contacted if construction will differ from descriptions in the report to review and revise our recommendations, if necessary.

We believe this investigation was conducted in a manner consistent with that level of care and skill ordinarily used by geotechnical engineers practicing in this area at this time. No warranty, express or implied, is made. If we can be of further service in discussing the contents of this report, or in the analysis of the influence of the subsurface conditions on the design of the building or any other aspect of the proposed construction, please call.

Re: Sleeping Indian Tank Site Phase I Environmental Site Assessment
(9450 S.H. 93, Arvada, Colorado)

Dear Mr. Beedle:

Waste Engineering, Inc. (WEI) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Practice E 1527-13 for a site at 9450 S.H. 93, Arvada, Colorado (Target Property). Any exceptions to, or deletions from, this practice are described in Section 6.0 of the Phase I ESA report. This assessment has revealed no evidence of a known or suspected *recognized environmental condition (REC) or historical recognized environmental conditions.* There were also no known de minimis conditions.

A recognized environmental conditions is defined in ASTM E1527-13 as "The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to the release to the environment: (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environmental."

A data gap was identified in this Phase 1. The data gap was caused by the inability to obtain the Coors SEMS files from EPA. EPA was not able to access to their warehouse where the SEMS files are archived due to COVID-19. Based on documents that were obtained through EPA, interviews, and location of the Coors facility, WEI determined this data gap did not affect the results or conclusions presented in this Phase 1 ESA.

This process is designed such that completion of the process, as described in this report, should constitute all appropriate inquiries into the Target Property and uses of the Target Property to qualify for the innocent landowner defense to CERCLA liability.

Please do not hesitate to call with any questions you may have regarding this information.

Very truly yours,

WASTE ENGINEERING, INC.

Sleeping Indian Tank Site Phase I Environmental Site Assessment for 9450 State Highway 93, Arvada, Colorado 80007

1.0 INTRODUCTION

Waste Engineering, Inc. (WEI) has prepared this report to generally comply with the American Society of Testing and Materials (ASTM) Phase I Environmental Site Assessment (ESA) Standard E1527-13 (Standard). This ESA has been prepared for the use of the City of Arvada. This ESA includes the following sections:

- Target Property (TP) description,
- Review of historic use of the TP and adjoining properties,
- Interviews with relevant parties,
- Review of regulatory agency records, environmental databases, and environmental liens,
- Findings and assumptions,
- Opinions and conclusions, and
- Terms and conditions of assessment.

WEI observed 9450 State Highway 93, Arvada, Colorado (TP), in the field on April 20, 2020. The TP was free of snow and the ground could be easily observed.

1.1 Purpose

The ESA is intended to permit the user to satisfy one of the requirements to qualify for *Comprehensive Environmental Response Compensation and Liability Act* (CERCLA) landowner liability protection as an innocent landowner, bona fide prospective purchaser, or contiguous property owner.

1.2 Qualification of Professionals

This ESA was performed by Jennifer Keyes. Ms. Keyes qualifies as an "environmental professional." Ms. Keyes' resume is provided in Appendix A. WEI declares, to the best of our professional knowledge and belief, that Jennifer Keyes meets the definition of "environmental professional" as defined in §312.10 of 40 CFR 312 and ASTM 1527-13. She has the specific

qualifications based on education, training, and experience required to assess the nature, history, and setting of the TP (Appendix A). WEI has generally developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR, part 312. Andrew Earles, Ph.D., P.E., peer reviewed the report.

2.0 TARGET PROPERTY DESCRIPTION

2.1 Location and Legal Description

The TP is located in Arvada, Colorado, on the east side of State Highway 93, north of State Highway 72 (Figure 1). The TP consists of approximately 2 acres, and the center of the TP is approximately 39.8681165, -105.2403756, latitude and longitude respectively. The legal description for the TP can be found in Sleeping Indian Tank Site Minor Subdivision Plat (Appendix B) and is listed as the Northwest quarter of the Northwest quarter of Section 21, Township 2 South, Range 70 West of the 6th P.M., City of Arvada, County of Jefferson, State of Colorado. The tax parcel identification is 20-212-02-002. This lot is also known as Lot 2 (Appendix B).

2.2 Target Property and Vicinity General Characteristics

The TP is primarily undeveloped with the exception of a potable water pump station built for the City of Arvada (City) by Jefferson County Metropolitan District (JCMD) in 2012. The pump station is located in an existing easement; however, once the TP is purchased by the City, the easement will no longer be needed. An asphalt driveway with a gate off State Highway (S.H.) 93 provides access into the existing pump station and the TP. tS.H. 93 borders the TP to the west. S.H. 72 is approximately 640 ft to the south of the TP. The land in the general vicinity is primarily vacant land used historically for agriculture. In recent years, the agricultural land been developed as part of the Candelas development owned by Cimarron Ranch, Residential and Commercial, LLC. Mr. Charlie McKay is one of the principal owners of the Cimarron holdings which owns a great deal of the surrounding area (Appendix C). The TP drains to the south, towards S.H. 72 where there is an existing swale. The existing swale drains underneath S.H. 72 in a culvert and discharges to Barbara Gulch, a small tributary of Leyden Creek.

The only known easement on the TP is the City's easement for the pump station and associated pipes on the TP. The TP also includes stub outs for the proposed, future water storage tank. There are several other utility easements outside the TP along S.H. 93.

2.3 Current Use

The TP is generally undeveloped with the exception of a potable water pump station and associated piping system constructed for City use in 2012. The Sleeping Indian Tank Site (previously "Subdivision for New City Water Tank at Candelas") was a minor subdivision of unplatted land within the Candelas Outline Development Plan, Parcel 1-2 with a zoning designation Planned Unit Development-Business Residential (PUD-BP). The TP was platted in August 2019. The TP is located at the northeast corner of S.H. 93 and S.H. 72. The plat subdivided the land into two lots; Lot 1(~ 40 acres) and Lot 2 (~ 2.0 acres). Lot 1 is undeveloped at the time of this ESA and Lot 2 is to be used by the City of Arvada as a potable water storage tank site to complement the existing potable water pump house. Historically, the TP has been used for cattle grazing and other agricultural purposes. Charlie McKay, the principal owner of Cimarron LLC, stated that the TP has been in the McKay/Church family for over 100 years and the TP was used historically for agriculture.

2.4 Structures, Roads, or Other Improvements

Based on the field visit, development on the TP was limited to the following:

- An asphalt access road and small parking area off S.H. 93 leading to the existing pump station;
- The existing pump station which is housed in an approximately 30 feet by 20 feet brick and concrete building;
- Adjacent to the north side of the pump station building a chain linked fenced area that contains an electrical transformer and back-up diesel generator (genset) with a holding max fuel capacity of 1,488 liters (393 gallons); and
- Three-wire cattle fence - appears to be around the entire TP or a significant portion of it.

3.0 RECORDS REVIEW

3.1 Historical Use Information

Historical use information for the TP and adjoining properties was obtained by reviewing reasonably ascertainable sources, such as ownership information, aerial photographs, topographic maps, and conducting interviews.

3.1.1 Ownership Information

City of Arvada provided WEI with the Chain of Title for the surface ownership of the TP beginning in 1937. The ownership is summarized below and a copy of the Chain of Title is in Appendix D.

The TP was owned prior to 1937 by John F. Church. In 1937, the site was quit claim deed to Katherine E. Church. The Site stayed in the Church family until 1987 when the site was conveyed to Charles C. McKay and Perry S. McKay. The property was conveyed through quit claim deeds and special warranty deeds to various iterations of the corporations owned by Charles McKay until its current status as being owned Cimarron Commercial, LLC (whose managers are listed as Gregg A. Bradbury, Charles C. McKay, Jeffery. L. Nading). Cimarron Commercial, LLC has been listed as the property owner since 2006.

Based on the title information on the past property owners, the TP has been undeveloped since at least 1937 other than the water pump station built in 2004/2005 on behalf of the City. Appendix D also includes the title commitment for the entire parcel before it was subdivided.

3.1.3 Environmental Liens

A search by Environmental Data Resources, Inc. (EDR) did not report any environmental liens or activity and use limitations (AULs) associated with the TP. A copy of the report can be found in Appendix E.

3.1.4 Review of Aerial Photographs

Aerial photographs were reviewed to obtain information regarding TP development. The photographs were obtained from EDR and Google Earth. The photographs were reviewed to establish prior land use and to provide visual evidence of past activities that may have involved storage and/or spill/release events of petroleum hydrocarbons or potentially hazardous materials. A summary of WEI's review is outlined in Table 1 and a copy of the aerial package from the EDR report is in Appendix F.

TABLE 1
Review of Aerial Photographs

Date	Source/Number	Description
1937	EDR-6042115.11	The TP appears to be undeveloped. S.H. 93 and S.H. 72 are indicated as unpaved roads. There is also an unpaved, two track road indicated on the map running through the southwest corner of the site. A drainage assumed to be a tributary to Woman Creek/Big Dry Creek is visible to the north. A drainage assumed to be unnamed tributary to Barbara Gulch is to the south of the site. The rail road tracks to the east of the site are visible.
1941	EDR-6042115.11	The TP appears to be unchanged from the 1937 aerial photograph. There appears to be some additional lanes associated with S.H. 72.
1955	EDR-6042115.11	The TP appears to be unchanged from the 1937 aerial photograph. There appears to be some type of disturbance or vegetative die off to the southeast and changes in the width of S.H. 93.
1963	EDR-6042115.11	The TP appears mostly unchanged from the 1937 aerial photograph. There have been improvements made to the intersection of S.H 93 and 72 and these roads appear to be paved. The disturbance or denuded area southeast of the site is still visible as well as a disturbed area or lack of vegetation area on the west side of S.H. 93.
1971	EDR-6042115.11	The TP appears to be unchanged from the 1937 aerial photograph. Surrounding properties appear unchanged from the 1963 aerial.
1983	EDR-6042115.11	The TP appears to be unchanged from the 1937 aerial photograph. Surrounding properties appear unchanged from the 1963 aerial.
1988	EDR-6042115.11	The TP appears to be unchanged from the 1937 aerial photograph. Surrounding properties appear unchanged from the 1963 aerial. This aerial photography is poor quality.

1994	EDR-6042115.11	The TP appears to be unchanged from the 1937 aerial photograph. Surrounding properties appear unchanged from the 1963 aerial except the disturbed area/denuded vegetation on the west side of S.H. 93 is no longer visible. The one to the southeast of the site is still visible.
1999	EDR-6042115.11	The TP appears to be unchanged from the 1937 aerial photograph. Surrounding properties appear unchanged from the 1963 aerial. The disturbed or denuded area to the southeast of the site is visible.
2005	EDR-6042115.11	The TP appears to be unchanged from the 1937 aerial photograph. Surrounding properties appear unchanged from the 1963 aerial. The disturbed or denuded area to the southeast of the site is visible. S.H. 93 and S.H. 72 may have surfacing improvements.
2009	EDR-6042115.11	The TP appears to be unchanged from the 1937 aerial photograph with the exception of disturbed areas indicated in the southwest corner of the TP and potentially the beginning of an access road into the site. The disturbances continue to the south outside the site and along S.H. 72 and include a new unpaved road and potential fill or development site to the east of the site. There are also disturbances indicated south of S.H. 72 on both the southwest and southeast sides of S.H. 93 and S.H. 72. There is also a new roadway east of the rail road tracks where there appeared previously to be an irrigation ditch.
2013	EDR 6042115.11	The TP indicates a building matching the one observed in the field as the pump station and access road. The site also appears to be still disturbed from construction activities to the north of the building.
2017	EDR 6042115.11	The TaTP indicates a building and access road matching the pump station and access road observed in the field.
2019	Google Earth	The TP indicates a building and access road matching the pump station and access road observed in the field and have not changed since the 2017 aerial photograph.

Based on the aerial photograph reports, the TP was undeveloped prior to 2009. There is currently a building and access driveway on site that matched the building and access observed during the field reconnaissance/site visit.

3.1.5 Review of Historical Maps

WEI reviewed reasonably attainable historical maps of the TP to evaluate potential impacts to the TP from past development. WEI reviewed USGS topographic maps for the following years: 1899, 1906, 1939/1942, 1942, 1944, 1957, 1965, 1971, 1979, 1994, and 2013. There were also several other maps collected that did not provide data for the TP. These maps were not used for this Phase 1 ESA. A summary of the USGS topographic maps is outlined in Table 2 and the maps are located in Appendix G.

TABLE 2
Review of USGS Maps

Year	Description
1899 (30 minute quad.)	The TP appears to have an irrigation ditch stretching from the northwest corner of the TP to the southeast corner. It is plausible the line could represent a road instead of an irrigation ditch. There are no structures indicated on the TP. A road is indicated to the east of the TP and another road to the south.
1939/1942 (7.5 minute quad.)	No structures are indicated at the TP. S.H 93 is indicated on the west side of the TP and S.H. 72 is indicated approximately 640 ft to the south of the TP. The Boulder Diversion Canal is located approximately ¼ mile to the east of the site and Rocky Flat Lake is approximately ½ to the northeast of the TP. A railroad line is located south of S.H 72 and a transmission line is indicated east of the canal. The general area is labeled as Rocky Flats.
1942 (7.5 minute quad.)	There are no apparently changes to the TP or the adjacent properties from the 1939/1942 quadrangle map.
1944 (7.5 minute quad.)	There are no apparently changes to the TP or the adjacent properties from the 1939/1942 quadrangle map.
1957 (7.5 minute quad.)	There are no apparently changes to the TP or the adjacent properties from the 1939/1942 quadrangle. There were minor changes in the surrounding area including a label on the east side of the canal identifying it as a spoil bank and new unpaved roads south of the railroad approximately 0.8 miles to the southeast. This area is labeled as Rocky Plastic/Plastic and a new aqueduct south of S.H. 72.
1965 (7.5 minute quad.)	There are no apparently changes to the TP or the adjacent properties from the 1939/1942 quadrangle. There are minor changes in the surrounding area from the 1957 quadrangle including a new railroad located approximately 0.2 miles east of the TP.
1971 (7.5 minute quad.)	There are no apparently changes to the TP or the adjacent properties from the 1939/1942 quadrangle. There are minor changes in the surrounding area from the 1957 quadrangle map.
1979/80 (7.5 minute quad.)	There are no apparently changes to the TP or the adjacent properties from the 1939/1942 quadrangle. There are minor changes in the surrounding area from the 1957 quadrangle map.
1994 (7.5 minute quad.)	There are no apparently changes to the TP or the adjacent properties from the 1939/1942 quadrangle. There is a gravel pit and clay pit as well as structures indicated approximately 1 mile north of the TP as well as several roads. .
2013 (7.5 minute quad)	There are no apparently changes to the TP or the adjacent properties from the 1939/1942 quadrangle. The gravel pit, clay pit and buildings indicated on the 1994 are no longer indicated on the 2013 quadrangle map. The lake to the northeast has been renamed Francis Smart Reservoir. The water pump station is not indicated on the map.

Review of available USGS topographic maps indicates the TP has been undeveloped since at least 1899 based on topographical mapping. The topographical maps do not indicate the pump station house that was observed on the TP during the site reconnaissance.

Sanborn Fire Insurance Map coverage from EDR was also requested for this report; however, there was no information found for the TP (Appendix H).

3.1.6 Other Historical Information

WEI reviewed other historical information such as the property taxes, building permits, and City directories. There was a mistake on the EDR report listing the address incorrectly as 9480 S.H. 93 when the address is 9450. We do not believe this had any effect on the reports since they also searched surrounding properties including 9450 S.H. 93. None of the documents reviewed provided information indicating the use or storage of hazardous materials or petroleum products at the TP. There was a building permit for JCMD Water Storage Tank & Pump Station issued March 2, 2012 indicating that there were no structures or facilities on the TP until 2012 when the pump station was constructed. Copies of the historical information reports can be found in Appendix I.

3.1.7 Historical Interviews Including User and Owner Provided Information

Interviews with persons familiar with the TP have been conducted to obtain information pertinent to environmental evaluation.

On April 27, 2020, WEI received the completed ASTM 1527-13 user questionnaire from Sandra McDonald with the City of Arvada. The City is the potential buyer of the TP and user of this ESA. The user questionnaire completed by the City is located in Appendix J. To the best of their knowledge, the City is not aware of environmental cleanup liens against the property or of any activity and land use limitations (AULs) that are in place at the TP. The City believes that the purchase price being paid for the property reasonably reflects the fair market value of the property and is not aware of any obvious indicators that point to the presence or likely presence of contamination at the property, spills or storage of chemicals on the TP. The City currently owns the water pump station located on the TP and the easement the pump station and associated lines are located on.

On April 13 2020, WEI interviewed Charlie Mckay, one of the principal managers and owners of Cimarron Commercial, LLC, the current owners of the TP. WEI verbally went over the E1528

owner questionnaire with the Mr. McKay (See Appendix K for documented responses). According to Mr. Mckay, the McKay/Church family has owned the property along with other properties in the area for over 100 years. The family used the TP for grazing cattle and other agricultural purposes. Mr. McKay are not aware of any petroleum products or hazardous waste being stored or located on, in, at or near the TP. Mr. McKay is not aware of any institutional or engineering controls that were required to be installed at the TP nor have there been any improvements made to the TP other than the water pump station building in 2011/2012. There are no other structures, wells or septic systems other than the pump station. According to Mr. McKay, there are no pits, lagoons, or fill material at the TP. Mr. McKay was aware of fill that was placed approximately 400 feet to the east of the TP on another property owned by Cimarron Commercial, LLC. The fill was from the construction Candelas Parkway to the southeast. Mr. McKay was aware of some potential environmental concerns on the property owned by Coors approximately 150 ft to the southeast (downgradient) of the TP. According to Mr. McKay, the issues involved the Coors Company dumping excess beer from their Golden Plant on the ground killing the vegetation. Mr. McKay is also aware of Rocky Flats located approximately 0.9 miles to the north. The Rocky Flats buffer is located approximately 159 feet to the north of the TP.

On April 20, 2020, WEI interviewed Cliff Deeds, the water pump station manager for the City. Mr. Deeds is considered the Key Site Manager. Mr. Deeds has been managing the pump station since it was built in 2012. Mr. Deeds is not aware of any storage or use of the petroleum products or hazardous chemicals other than the diesel genset located adjacent to the pump station that serves as a back-up generator for the pump station. The genset holds up to 393 gallons of fuel. The genset has built in secondary containment and is located on a concrete pad. Details on the genset are in Appendix L. The electrical transformer that serves the generator is relatively new (2012) and does not contain PCBs. Mr. Deeds is not aware of any spills or releases of petroleum products or hazardous materials at the TP. Mr. Deeds was also involved in the TP when it was being constructed and is not aware of any fill material being brought to the TP during construction.

On April 17, 2020, WEI received an email response from Steven Parker, the Fire Marshall with the Arvada Fire Protection District. Mr. Parker had no knowledge of any spills or releases at the TP (Appendix M).

On April 24, 2020, WEI interviewed Ken Wright the founder of WEI and Wright Water Engineers, Inc. (WWE). According to Mr. Wright, Coors had performed land treatment with beer on the site that did not meet expectations.

3.1.8 Historical Summary

Based upon interviews, review of aerial photographs, and topographic maps, the TP was not developed until 2012 when a portable water pump station was constructed on the property. The TP and adjoining properties observed in the historical review are consistent with those seen during the reconnaissance. Review of available historical information indicated that there are no known past activities associated with the use, generation, storage, or release of petroleum hydrocarbons or potentially hazardous materials at the TP.

3.2 Physical Setting Information

3.2.1 Topography

The 2013 7.5-minute *USGS Topographic Map of Golden, Louisville, Ralston Buttes, Eldorado Springs (*Appendix G*)* and information from the *EDR Radius Map with Geocheck* (Appendix N) indicate that the TP is located at approximately 6,545 feet above sea level. The headwaters of a drainage are indicated south of the site on the west side of S.H. 93 and flows near the southwest corner of the TP. S.H. 93 is located immediately west of the TP. S.H. 72 is located approximately 640 feet south of the TP. An unnamed drainage that flows to Francis Smart Reservoir is indicated approximately 790 ft north of the TP. Francis Smart Reservoir is located 2,00 feet to the northeast of the TP and Woman Creek is located approximately 4,500 feet to the north of the TP. There are no structures indicated on any of the quadrangle maps; however, based on the field visit there is a structure located on the TP; however, most of the surrounding area is vacant land. The Candelas development lies to the east outside of the extents of these topographic maps.

According to the quadrangle maps, the regional flow is to the south and southeast which is fairly consistent with the field visit observations. The TP is fairly flat. Surrounding topography profiles are provided in the *EDR Radius Map with Geocheck* in Appendix N. According to the *EDR Radius Map with Geocheck,* the TP is not in the floodplain, nor are there any National Wetland Inventory (NWI)

features on the TP; however, there are wetlands and floodplains within the extent of the search radius. These features are associated with the Boulder Diversion Connector and Francis Smart Reservoir.

3.2.2 Soil Conditions

Based on the *EDR Radius Map with Geocheck* (Appendix N), the predominant soil type at the TP is Flatirons, a very cobbly sandy loam. The hydrologic soil group (HSG) is Class C, which has a slow infiltration rate. According to the EDR report, there is also some Nederland soils in the southern portion of the site along the drainageway. The HSG for these soils are Class B, which has a moderate infiltration rate.

3.2.3 Geology

According to the *EDR Radius Map with Geocheck* (Appendix N), the TP is part of the Cretaceous system in the Navarro series code "uK4" from the Mesozoic Era.

3.2.4 Regional Groundwater Conditions

Groundwater at the TP was not measured during WEI's reconnaissance of the TP. Groundwater at the TP is expected to flow south/southeast towards the unnamed tributary to Barbara Gulch and ultimately to Leyden Creek.

3.3 Regulatory Records Review

The purpose of the regulatory review is to obtain and review reasonably ascertainable records that will help identify recognized environmental conditions in connection with the TP. For this review, records were obtained from EDR, 6 Armstrong Road, 4th Floor, Shelton, CT, 06484. The *EDR Radius Map with Geocheck* (Inquiry Number 6042115.2s) is included as Appendix N.

The regulatory review included several database searches prepared and maintained by environmental regulatory agencies for the area and searched within the radius specified by ASTM Phase I Environmental TP Assessment Standard E1527-13. A full list of the databases searched by EDR is listed in the EDR report (Appendix N). The EDR report does not list the TP on any

searches; however, the report lists two facilities within the search distances and one unmapped listing for a facility with poor or inadequate address information:

1) Yenter Environmental listed as a RCRA-VSQG located to the southeast of the site at located at S.H. 72 & S.H. 93, Golden, CO 80401. The database generally includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. This site is listed a Conditionally Exempt Small Quantity Generator. There were no violations found in the data search for this facility, and it is located downgradient from the TP.

2) Adolf Coors, Inc. who also was associated with Golden Properties, Ltd. is listed on the EDR report as a SEMS-Archive facility located at located at S.H. 72 & S.H. 93, Golden, CO 80401. SEMS-Archive (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS Archive by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. WEI reached out the EPA Region 8 about this facility and they sent an email and document record review. The document titles indicate that a listing in 1981 reveals that "final strategy determination is that after investigation of this site no hazardous waste was revealed." However, it does appear that a remedial response action was taken in 1985 (Appendix O). The records also indicate that the listing was due to land application of brewery waste materials from the Coors Brewery which is consistent with the interviews and the vegetation die off southeast of the TP observed in the aerial photographs. The Coors land

application was downgradient from the TP. There is also no indication that the dumping involved materials other than those associated with beer/brewery production and, although toxic to the vegetation, these types of materials are not likely to impact the TP or a Phase 1 ESA findings.

3) National Wind Technology. This is located of S.H. 52 approximately 3.2 miles to the northeast. There are several drainages between the TP and this facility. Due to the distance from the site and the regional flow, WEI does not believe this facility needs additional investigation.

The EDR report does not identify the TP in any of the database searches.

Additionally, due to the notoriety of Rocky Flats, a CERCLA/SEMS facility, WEI also investigated that facility for potential to be a recognized an environmental condition. Rocky Flats has had extensive sampling and analysis. Appendix P contains a summary report from the Off-Site Lands – Contamination and Risk developed in 2008 and updated in 2014. This report indicates that based on the extensive data collected, in 1997 by DOE, CDPHE and EPA, it was determined that there was no need to perform environmental remediation of any off-site lands. Their findings and conclusions were subsequently submitted to the Agency for Toxic Substances and Disease Registry (ATSDR), a division within the Federal Centers for Disease Control. ASTDR evaluated whether the risk posed to residents was adequately calculated. They also evaluated whether DOE, EPA and CDPHE's determination to not remediate off-site lands was supportable. ASTDR affirmed DOE's data and conclusions – no additional cleanup activities were needed to protect public health and the environment. WEI also reviewed a power point titled Contamination at Rocky Flats (2015) from the Rocky Flats Stewardship Council, as well as several previously performed Phase I ESAs for Cimarron Commercial and Residential, LLCs/Charlie McKay & Gregg Bradbury and a report EDR generated for WEI for the Rocky Flats facility (See Appendix P).

3.4 Previously Performed Phase 1 ESAs

WEI obtained two Phase 1 reports that were performed in the general area. These Phase 1 reports included:

- 3 Engwis Properties, Portions of Section 21, Township 2 South, Range 70 West prepared in 2006 for Charles. C. McKay & Gregg Bradbury & Jeff Nading c/o Church Ranch/Cimarron Holding Company.

- Cimarron Park, approximately 426 acres of vacant land located to the SW of W. 96th Avenue and North Indiana Street prepared in 2006 for Charles. C. McKay & Gregg Bradbury c/o Church Ranch. Part 1 of 3.

Various pieces of useful information were obtained from these reports including:

- According to information provided by USEPA, Rocky Flat operations ceased in 1989 and the site has been undergoing stringent and successful remediation activity since operations ceased in 1989.

- Primary potential pathways for offsite contamination from Rocky Flats were identified as airborne soil contaminants, surface water or groundwater. Since the TP for this Phase 1 is upgradient and upwind of the Rocky Flats facility, WEI does not believe these primary pathways exist between Rocky Flats and this TP.

- Data from CDPHE from 1970 and 1991 confirmed the prevailing wind flow is to the east from Rocky Flats facility. The existing sampling data indicated contamination was to the east and east/southeast of the facility. The TP is to the southwest of the Rocky Flats facility.

- According to CDPHE by 2005 the agency had issued a no further action status to the facility. The geologist interviewed in the Cimarron Park 426 acre of vacant land Phase 1, Harley Ainscough also stated that there had been no detection of groundwater, surface water or sediment in the south buffer of Rocky Flats. The TP is south of Rocky Flats facility.

- The Engwis Phase 1 ESA listed the Yenter facility as a RCRA-generator facility. This report concluded that due to the location and indication of no reportable violations that there was no prudent reason to believe listing that this facility presents any significant

environmental risk to the subject property of the report which is located immediately to the south and south west of this TP.

- The Adolf Coors facility was not on the Engwis Phase 1 even though it is believed the activity in question was located on the subject property for that Phase 1 ESA.

- BFI landfill south of Hwy 72 was listed on the Engwis Phase 1. This Landfill is likely on the EDR report for this TP due to the distance from the TP which is more than 1 mile to the south. The Engwis Phase 1 indicated that the BFI landfill has on-site monitoring controls that have not indicated that there has been a migration of methane gas from the landfill. Due to the TP of this Phase 1 being over 1 mile away and located upgradient from the landfill, WEI does not believe this facility is a potential recognized environmental condition for this ESA. This landfill is currently run by Republic Services, Inc.

Neither of the two Phase 1 ESA for adjacent and nearby areas had recognized environmental conditions.

3.5 Summary of Database and File Review

There is no evidence of any past or present facilities within the ASTM minimum search distances of the TP indicative of the use, storage, or release of petroleum products or hazardous waste other than two downgradient sites (Coors and Yenter Environmental). After reviewing EPA files and past Phase 1 ESA, WEI does not believe either of these facilities pose as recognized environmental conditions for the TP. Additionally, WEI evaluated Rocky Flats and what is now Republic Services Foothills Landfill even though both were outside of the search distances. There was no evidence that either of these facilities are recognized environmental conditions for the TP. The only chemicals of concern (COC) in the surrounding area identified by WEI are associated with Rocky Flat but through extensive data sampling by EPA, DOE, and CDPHE, there is no evidence of contamination at the TP or the need for vapor encroachment screening (VES) per ASTM E2600-15. Radon is common in this area; therefore, if a structure with a basement were to be constructed, a VES should be performed. Currently, the City plans to use the TP to construct an above ground water storage tank. If the use changes in the future, a VES should be considered.

4.0 SITE RECONAISSANCE

4.1 Observations

WEI observed the TP and adjoining properties on April 20, 2020. A photographic log is included in Appendix Q.

4.1.1 Methodology and Limiting Conditions

The TP accessed off S.H. 93, and the TP was observed on foot. The TP was free of snow and vegetation, topography and soil were observed. There were no signs of distressed vegetation, spills/soil staining, smells/odors, or standing water. There were no chemicals observed other than associated with the genset and transformer on site.

4.1.2 Description of Specific Features

The TP area consists of approximately 2 acres. Access to the TP is off S.H. 93. WEI observed a portable water pump station and associated back-up diesel genset and electrical transformer. There was a three-wire cattle fence near the perimeter of the property. There were no signs of distressed vegetation, spills/soil staining, smells/odors, or standing water. There were no chemicals or petroleum products observed on the TP other than those associated with the genset and transformer. The TP slopes primarily to the south and the features are generally consistent with those described in the historical aerial review and topographic maps.

4.2 Adjoining Property Observations

4.2.1 Current Use of the Adjoining Properties

Adjoining properties were observed from the TP and public access rights-of-way to make a cursory assessment of the current land use and the potential for recognized environmental conditions. The TP is bordered to the north, east and south by undeveloped, vacant land. There is an area approximately 400 feet of the TP that has been used to place fill direct and is elevated from the surrounding areas. The fill area has been seeded and currently is vegetated. The TP is bordered to the west by S.H. 93.

4.2.2 Past Use of the Adjoining Properties

The adjoining properties appear to have been primarily used for agriculture/cattle grazing with some limited use of the area to the south by Coors as a land application area for waste brewery products.

5.0 EVALUATION, FINDINGS AND CONCLUSION

The TP and most of the adjoining properties appear to be used for agriculture/cattle grazing until the TP was used for a portable water pump station constructed in 2012 and fully operating by 2013. The TP has been in the McKay/Church Family for over 100 years with some access to the Engwis Property to the south where there was use by Coors for land applying brewery waste products. EPA evaluated area where Coors had been land applying materials and concluded that there was no further action that needed to be taken.

There is no evidence of spills or release of chemicals or hazardous waste associated with this TP, and the TP did not come up on any database searches nor was the Arvada Fire Protection Department aware of any hazardous materials or petroleum product spills/releases associated with the property. There is a petroleum on the TP properly stored in secondary containment and an electrical transformer.

WEI has performed a Phase I ESA in conformance with the scope and limitations of Practice E 1527-13 for the TP at 9450 S.H. 93, Arvada, Colorado. Any exceptions to, or deletions from, this practice are described in Section 6.0. Based on the results of the database records review, interviews, historical review of reasonably ascertainable information, user provided information, and the site reconnaissance, there are no known or suspect *recognized environmental condition (REC) or historical recognized environmental conditions* due to the likely presence of a hazardous substance or petroleum product at the TP. There were also no known de minimis conditions.

A data gap was identified in this Phase 1. The data gap was caused by the inability to obtain the Coors SEMS files from EPA. EPA was not able to access to their warehouse where the SEMS files are archived due to COVID-19. Based on documents that were obtained through EPA, interviews,

and location of the Coors facility, WEI determined this data gap did not affect the results or conclusions presented in this Phase 1 ESA.

Performance of this Phase 1 ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized or historical environmental conditions in connection with a property.

6.0 TERMS AND CONDITIONS OF ASSESSMENT

This assessment is based on information available to WEI at the time of the investigation. The opinions expressed concerning the environmental risks or migration of contaminants is based on the data in this report. Additional data could change the opinions expressed.

The goal of the processes established by the ASTM is to identify recognized environmental conditions defined as "The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to the release to the environment: (2) under conditions indicative of a release t the environment; or (3) under conditions that pose a material threat of a future release to the environmental." The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of governmental agencies. This process is designed such that completion of the process, as described in this report, should constitute all appropriate inquiry into the TP and uses of the TP to qualify for the innocent landowner defense to CERCLA liability.

Future conditions may change, and further investigation should be completed if contamination is suspected or if conditions substantially change. Because of uncertainties related to subsurface conditions and the changing nature of the TP conditions, the findings of this report are based on reasonably ascertainable information and reports. WEI's knowledge of Activity Use Limitations (AULs) is based primarily on information provided in the user questionnaire, review of historical aerial photos, environmental lien search, and a database search for facilities within the ASTM search distance.

This ESA did not include any inquiry with respect to radon (although some limited data is provided in the *EDR Radius Map with Geocheck)*, methane, asbestos-containing materials, lead-based paint,

lead in drinking water, molds, formaldehyde, endangered species, cultural and historic resources, industrial hygiene, health and safety, ecological resources, indoor air quality, high-voltage power lines, controlled substances, wetlands (other than the National Wetland Inventory data), hazardous substances not included in the CERCLA definition (42 U.S.C. 89601 [14]), compliance with any activity and use limitations if applicable, subsurface investigation activities, or other services or potential conditions or features not specifically identified and discussed herein. In those instances where additional services or service enhancements are included in the report as requested or authorized by the client, specific limitations attendant to those services are presented in the text of the report.

This Phase I ESA is valid for 180 days from the date the user takes title.

Qualifications of Professionals Performing ESA

WEI
Waste Engineering, Inc.

JENNIFER M.H. KEYES

CURRENT Project scientist on several environmental site assessments (ESAs), environmental sampling programs, stormwater management plans, and other environmental water projects.

EDUCATION Master of Science in Hydrology, 2001 University of Georgia at Athens.

Bachelor of Arts in Environmental Biology, 1991 University of Colorado at Boulder.

CERTIFICATION CDOT Transportation Erosion Control Supervisor, 2003 to present;
HAZWOPER-Registration 2467, Georgia; CPESC Certification No. 3769

REPRESENTATIVE EXPERIENCE

-10 years experience with Phase I ESAs for residential, commercial, and industrial properties to comply with due diligence guidelines of the American Society for Testing and Materials (ASTM).

-15 years experience with stormwater management plans/stormwater pollution prevention plans for construction activities greater than 1 acre.

-Water quality monitoring for stormwater, surface water, and groundwater.

-Stormwater inspections.

-Construction dewatering monitoring and compliance.

- Training and MS4 Stormwater Program assistence.

Waste Engineering, Inc., 2490. W 26th Ave, Suite 100A, Denver, CO 80211
Tel. 303/433-2788; Fax. 303/480-1020, e-mail:krwright@wrightwater.com

OTHER EXPERIENCE

Kiewit, *Environmental Compliance,* T-REX Project, Denver, CO. June 2003 to May 2005.

The transportation expansion (T-REX) project is a $1.67-billion highway construction and light rail project along the southeast corridor of Interstates 25 and 225. Environmental compliance included conducting stormwater inspections, assisting with best management practices (BMPs) development/design and ensuring compliance with the project's Stormwater Master Plan. Additional responsibilities included water and soil sampling, daily air quality reports, monitoring bridge demolitions and construction near wetlands and streams to ensure compliance with the appropriate permits, preparing waste profiles and manifest for hazardous and non-hazardous materials, and representing the company during project meetings and monthly tours with the Colorado Department of Transportation, Regional Transportation District, and Colorado Department of Public Health and Environment.

Brown and Caldwell, *Scientist II*, Atlanta, GA. May 2001 to 2003.

Phase I ESAs for national clients, stormwater work, groundwater remediation, surface and groundwater sampling, and watershed management.

ACZ Laboratories, *Laboratory Technician***,** Steamboat Springs, CO, May 1995-April 1997.

Analyzed water samples for various parameters including: turbidity, pH, conductivity, biological oxygen demand, fecal coliform, and other contaminants requirements under the *Clean Water Act*, Superfund clean-up, and general Environmental Protection Agency mining and sewage guidelines.

LEGAL DESCRIPTION AND DEDICATION

THE UNDERSIGNED, BEING THE OWNERS OF A PARCEL OF LAND LOCATED IN THE NORTHWEST QUARTER OF SECTION 21, TOWNSHIP 2 SOUTH, RANGE 70 WEST OF THE SIXTH PRINCIPAL MERIDIAN, COUNTY OF JEFFERSON, STATE OF COLORADO BEING DESCRIBED AS FOLLOWS:

COMMENCING AT THE NORTHWEST CORNER OF SAID SECTION 21, SAID POINT BEING THE POINT OF BEGINNING: THENCE N89°36'20"E ALONG THE NORTH LINE OF SAID NORTHWEST QUARTER A DISTANCE OF 1236.70 FEET TO A POINT ON THE WESTERLY LINE OF THE UNION PACIFIC RAILROAD AS DESCRIBED IN BOOK 769 AT PAGE 309; THENCE ALONG SAID WESTERLY LINE, S03°49'03"W A DISTANCE OF 1726.65 FEET TO A POINT ON THE NORTHERLY RIGHT-OF-WAY OF STATE HIGHWAY 72 AS RECORDED AT RECEPTION NO. 88049628; THENCE ALONG SAID NORTHERLY RIGHT-OF-WAY OF STATE HIGHWAY 72 AND THE EASTERLY RIGHT-OF-WAY OF STATE HIGHWAY 93 AS RECORDED AT RECEPTION NO. 88049628, THE FOLLOWING SIX (6) COURSES: 1) N81°01'09"W A DISTANCE OF 779.85 FEET; 2) THENCE N42°44'17"W A DISTANCE OF 278.81 FEET; 3) THENCE N15°29'59"W A DISTANCE OF 485.59 FEET; 4) THENCE 383.62 FEET ALONG THE ARC OF A NON-TANGENT CURVE TO THE RIGHT HAVING A RADIUS OF 2,815.00 FEET, A CENTRAL ANGLE OF 07°48'29" AND A CHORD WHICH BEARS N04°01'18"W A DISTANCE OF 383.32 FEET TO A POINT OF NON-TANGENCY; 5) THENCE N01°31'10"W A DISTANCE OF 159.49 FEET TO A POINT ON THE WESTERLY LINE OF SAID NORTHWEST QUARTER OF SECTION 21; 6) THENCE ALONG SAID WESTERLY LINE, N00°12'09"W A DISTANCE OF 378.05 FEET TO THE POINT OF BEGINNING.

SAID PARCEL CONTAINS 1,832,061 SQUARE FEET OR 42.058 ACRES MORE OR LESS.

ALL LINEAL DIMENSION ARE IN U.S. SURVEY FEET.

HAVE LAID OUT, PLATTED, AND SUBDIVIDED THE ABOVE DESCRIBED LAND, UNDER THE NAME AND STYLE OF SLEEPING INDIAN TANK SITE MINOR SUBDIVISION PLAT, AND HEREBY DEDICATE TO THE CITY OF ARVADA IN FEE SIMPLE, EXCEPT THOSE OF PRIOR RECORD, THE STREET(S) AND PUBLIC WAY(S) AS SHOWN ON THE PLAT, AND GRANTS TO THE CITY OF ARVADA SUCH EASEMENTS AS ARE CREATED HEREBY AND DEPICTED OR, BY NOTE, REFERENCED HEREON, ALONG WITH THE RIGHT TO INSTALL, MAINTAIN, AND OPERATE MAINS, TRANSMISSION LINES, SERVICE LINES, AND APPURTENANCES, EITHER DIRECTLY OR THROUGH THE VARIOUS APPLICABLE SERVICE PROVIDERS AS MAY BE NECESSARY TO ACCOMPLISH THE INTENDED PURPOSES OF SUCH EASEMENT. UNLESS MORE NARROWLY DEFINED BY NOTE HEREON, UTILITY SHALL MEAN SEWER, WATER, DRAINAGE, ELECTRICITY, GAS, TELEPHONE, CABLE AND OTHER TELECOMMUNICATION FACILITIES.

TITLE CERTIFICATION

I, James Betson, AN AUTHORIZED REPRESENTATIVE OF FIRST AMERICAN TITLE INSURANCE COMPANY, DULY FORMED AND EXISTING PURSUANT TO THE STATUTES OF COLORADO FOR THE PURPOSE OF INSURING TITLES TO REAL PROPERTY IN COLORADO, DO HEREBY CERTIFY THAT I HAVE EXAMINED THE TITLE OF ALL LANDS HEREIN ABOVE INDICATED AND ALL LIENS SHOWN UPON THE WITHIN PLAT AS PUBLIC WAYS AND EASEMENTS AND THAT THE TITLE TO SUCH LANDS IS THAT OF THE DEDICATORS AND IS FREE AND CLEAR OF ALL LIENS AND ENCUMBRANCES, EXCEPT AS SET FORTH IN TITLE COMMITMENT NO. NCS-849456-WT-CO

SIGNED AND DATED THIS 7th DAY OF August, 2019.

NOTES:

1. ACCORDING TO COLORADO LAW, YOU MUST COMMENCE ANY LEGAL ACTION BASED UPON ANY DEFECT IN THIS SURVEY WITHIN THREE YEARS AFTER YOU FIRST DISCOVERED SUCH DEFECT. IN NO EVENT MAY ANY ACTION BASED UPON ANY DEFECT IN THIS SURVEY BE COMMENCED MORE THAN TEN YEARS FROM THE DATE OF CERTIFICATION SHOWN HEREON.
2. THIS SURVEY DOES NOT CONSTITUTE A TITLE OR OWNERSHIP SEARCH BY MARTIN/MARTIN INC. ALL OWNERSHIP EASEMENT AND PUBLIC RECORD INFORMATION USED IN THE PREPARATION OF THIS REPLAT WAS OBTAINED FROM COMMITMENT NO. NCS-849456-WT-CO, WITH AN EFFECTIVE DATE OF APRIL 22, 2019 AT 5:00P.M. BY FIRST AMERICAN TITLE INSURANCE COMPANY.
3. BOUNDARY CORNERS OF SUBDIVISION ARE MONUMENTED WITH A #4 REBAR WITH CAP P.L.S. #23899, UNLESS SHOWN OTHERWISE.
4. ANY PERSON WHO KNOWINGLY REMOVES, ALTERS OR DEFACES ANY PUBLIC LAND SURVEY MONUMENT OR LAND BOUNDARY MONUMENT OR ACCESSORY COMMITS A CLASS TWO (2) MISDEMEANOR PURSUANT TO STATE STATUTE 18-4-508, C.R.S.
5. ALL DIMENSIONS SHOWN ARE IN U.S. SURVEY FEET.
6. OWNER, FOR ITSELF AND ITS SUCCESSOR AND ASSIGNS, AGREES TO REASONABLY COOPERATE WITH THE CITY OF ARVADA WITH RESPECT TO THE FUTURE DEDICATION, AT NO COST TO THE CITY OF ARVADA, OF A GENERALLY NORTH/SOUTH RIGHT-OF-WAY FOR PUBLIC STREET AND UTILITY PURPOSES, OVER A PORTION OF TRACT B TO PROVIDE ACCESS TO AND A UTILITY CORRIDOR FOR THE PARCEL OF PROPERTY LOCATED TO THE SOUTH OF THE PROPERTY SUBJECT TO THIS PLAT; PROVIDED HOWEVER, NEITHER OWNER NOR ITS SUCCESSORS OR ASSIGNS SHALL HAVE ANY OBLIGATION OR LIABILITY, OR INCUR ANY COSTS, WITH RESPECT TO THE CONSTRUCTION OR INSTALLATION OF ROADWAY, UTILITY OR OTHER IMPROVEMENTS WITHIN SUCH DEDICATED RIGHT-OF-WAY.
7. BASIS OF BEARINGS: BEARINGS ARE BASED ON THE WESTERLY LINE OF THE NORTHWEST QUARTER OF SECTION 21, TOWNSHIP 2 SOUTH, RANGE 70 WEST, SIXTH PRINCIPAL MERIDIAN ASSUMED TO BEAR S00°12'09"E AND BEING MONUMENTED BY A FOUND BRASS PLATE 2"x2" SET IN TOP OF CONCRETE STAMPED NOV. 10, 1927 G. COORS OF GARDNER AT THE NORTHWEST CORNER OF SAID SECTION AND A FOUND BRASS PLATE 2"X2" SET ON TOP OF CONCRETE AT THE WEST QUARTER CORNER OF SAID SECTION 21.
8. MINERAL RIGHTS AS CONVEYED BY MINERAL QUITCLAIM RECORDED AUGUST 15, 2006 AT RECEPTION NO. 2006099766, AND ANY AND ALL ASSIGNMENTS THEREOF OR INTERESTS THEREIN.

SURVEYOR'S STATEMENT

I, RICHARD A. NOBBE, A REGISTERED LAND SURVEYOR IN THE STATE OF COLORADO, DO HEREBY CERTIFY THAT THE SURVEY OF SLEEPING INDIAN TANK SITE MINOR SUBDIVISION PLAT WAS MADE UNDER MY SUPERVISION AND THE ACCOMPANYING PLAT ACCURATELY AND PROPERLY SHOWS SAID SUBDIVISION.

CIMARRON / VAUXMONT

Framework Diagram

Arvada, Colorado

Cimarron Park/ Vauxmont Character Narrative

The following narrative describes the proposed land use plan for the Cimarron Park and Vauxmont site. It begins with a general summary of the planning process and principles that were used to organize land use, circulation and open space on both the Cimarron and Vauxmont sites. The narrative then describes the history of the Cimarron Park site, reason for the zone change, proposed land uses, circulation systems and planning principles that apply specifically to the Cimarron site in greater detail.

Joint Planning Process for Cimarron Park and Vauxmont

The Cimarron Park and Vauxmont sites were the subject of a joint planning effort that included the respective property owners and their consultant teams. Representatives of the City of Arvada also participated in key work sessions.

The result of that effort is a framework plan that describes the proposed location of transportation systems, open space systems and land uses on the Cimarron and Vauxmont sites. The framework plan supports the City's desire to create sites for retail, commercial and residential uses and is consistent with the recommendations included in the report prepared by Economic & Planning Systems on behalf of the City of Arvada.

A separate DDP will be prepared, submitted and approved for the Cimarron and Vauxmont properties. While changes to the individual DDP's may certainly occur over time, the framework plan is intended to illustrate the key relationships that are intended to be maintained.

Circulation and Access

Primary circulation and access to and through the Cimarron and Vauxmont sites will be provided via several existing and proposed regional roadways. These include State Highway 72, State Highway 93, Indiana Street, the proposed Jefferson Parkway and the proposed Foothills Boulevard. Local streets that provide excellent internal access and circulation to individual parcels and neighborhoods will also be provided.

Although the alignment of the Jefferson Parkway has not been finalized, the framework plan incorporates the alignment and interchange location(s) preferred by the City of Arvada. The earthwork associated with the construction of parkway will have significant impacts on the existing topography of the Cimarron and Vauxmont sites. These impacts have been considered and can be accommodated in both the framework plan and the DDP for the Cimarron Park and Vauxmont sites. Detailed grading, access points and construction plans for these regional roadways and local streets will be developed as part of the future Preliminary Development Plan (PDP) submittals. The objective for signal spacing will be ¼ mile apart (1320').

Land Use

The selection and organization of general land use categories is consistent with the preferences expressed by the City of Arvada. Key components include approximately 300-acres of contiguous business park, a mixed-use town center, regional retail uses and residential sites that provides the opportunity for residents to walk to jobs, shopping and parks. The following is a more detailed description of each of these important uses.

Regional Retail: Because successful retail sites require both excellent visibility and access, it is anticipated that the regional retail uses may be located on two parts of the site. One site consists of approximately 55-acres located on Cimarron Park at the south side of the Jefferson Parkway interchange. The second site consists of approximately 50-acres located at the west end of Vauxmont at the intersection of State Highways 72 and 93.

Town Center: The opportunity for a mixed-use town center will be provided on the north side of the Jefferson Parkway interchange located on the Cimarron Park site. This location will provide excellent vehicular access and visibility from the Parkway. It will also place the town center within comfortable walking distance of the higher density residential uses located between the Parkway and the Rocky Flats Wildlife Refuge.

Business Park: The City's desire for 500-acres of contiguous property that can support commercial, office and light industrial uses is accommodated on both the Cimarron Park and Vauxmont sites. Excellent vehicular access is provided from the proposed Jefferson Parkway interchanges at Foothills Boulevard and Highway 72. Additional development sites located on adjacent properties (, e.g. Consolidated Mutual, Foothills Community Church and Fortune properties) will allow the total amount of generally contiguous land to exceed the 500-acre minimum requested by the City.

Residential Neighborhoods: Residential neighborhoods are located along the northern edge of both the Cimarron Park and Vauxmont sites in order to take advantage of excellent views and adjacent open space provided by the Rocky Flats Wildlife Refuge.

On the Cimarron Park site, residential densities of 5 to 24-units per acre are proposed in proximity to the mixed-use parcel (town center). These higher densities are most consistent with the concept of a mixed-use walkable center. Further away from the mixed-use site, single-family neighborhoods will be organized around clearly identifiable centers (parks, schools and/or civic uses) located within a 5-minute walk of each home. Walkability will be enhanced through the thoughtful location and design of sidewalks, trails, transit stops and connection to adjacent open space systems.

On the Vauxmont site, residential densities of 1.2 to 4.5-units per acre are proposed. This is a slight modification to the residential densities currently approved on the Vauxmont site.

Other: Approximately 80-acres has been has been discussed with the school district as having the potential to be a joint school site. The area is located near the center of the residential neighborhoods (on the eastern end of the Vauxmont property) in order to serve students from both the Vauxmont and Cimarron neighborhoods equally well.

Parks and Open Space

The Cimarron Park and Vauxmont sites are located in proximity to several thousand acres of public open space in Boulder County, Jefferson County, Westminster, the U.S. Department of Energy Buffer Zone (future Rocky Flats National Wildlife Refuge) and the City of Arvada. They are also adjacent to the Welton Reservoir site.

The Cimarron and Vauxmont sites have spectacular views of the Front Range and the Flatirons to the west and northwest. Views to the east include Standley Lake and Downtown Denver. The parks and open space system will be organized to take advantage of the opportunities presented by these existing attributes.

The location of parks and open space will be carefully coordinated so that the Cimarron Park and Vauxmont sites contribute to a larger integrated system that serves the residents of the community and the City of Arvada. The general goals for open space are:

- Protect special natural areas
- Be accessible and useable by residents
- Provide attractive connections between neighborhoods in Cimarron/Vauxmont
- Connect to the existing City of Arvada trails system

The owner/applicants intends to use the requirements of the City's Parks, Trails and Open Space Master Plan to guide the development of more detailed plans. Detailed information regarding proposed open space and trail systems will be provided in future PDP submittals for each property.

First American	ALTA Commitment for Title Insurance
Commitment	ISSUED BY **First American Title Insurance Company** File No: NCS-849456-WT-CO

COMMITMENT FOR TITLE INSURANCE

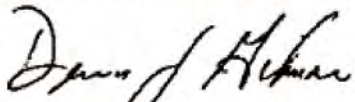
Issued By

FIRST AMERICAN TITLE INSURANCE COMPANY

NOTICE

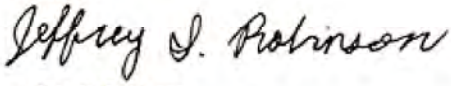
IMPORTANT-READ CAREFULLY: THIS COMMITMENT IS AN OFFER TO ISSUE ONE OR MORE TITLE INSURANCE POLICIES. ALL CLAIMS OR REMEDIES SOUGHT AGAINST THE COMPANY INVOLVING THE CONTENT OF THIS COMMITMENT OR THE POLICY MUST BE BASED SOLELY IN CONTRACT.

THIS COMMITMENT IS NOT AN ABSTRACT OF TITLE, REPORT OF THE CONDITION OF TITLE, LEGAL OPINION, OPINION OF TITLE, OR OTHER REPRESENTATION OF THE STATUS OF TITLE. THE PROCEDURES USED BY THE COMPANY TO DETERMINE INSURABILITY OF THE TITLE, INCLUDING ANY SEARCH AND EXAMINATION, ARE PROPRIETARY TO THE COMPANY, WERE PERFORMED SOLELY FOR THE BENEFIT OF THE COMPANY, AND CREATE NO EXTRACONTRACTUAL LIABILITY TO ANY PERSON, INCLUDING A PROPOSED INSURED.



THE COMPANY'S OBLIGATION UNDER THIS COMMITMENT IS TO ISSUE A POLICY TO A PROPOSED INSURED IDENTIFIED IN SCHEDULE A IN ACCORDANCE WITH THE TERMS AND PROVISIONS OF THIS COMMITMENT. THE COMPANY HAS NO LIABILITY OR OBLIGATION INVOLVING THE CONTENT OF THIS COMMITMENT TO ANY OTHER PERSON.

COMMITMENT TO ISSUE POLICY



Subject to the Notice; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions; and the Commitment Conditions, ***First American Title Insurance Company***, a Nebraska Corporation (the "Company"), commits to issue the Policy according to the terms and provisions of this Commitment. This Commitment is effective as of the Commitment Date shown in Schedule A for each Policy described in Schedule A, only when the Company has entered in Schedule A both the specified dollar amount as the Proposed Policy Amount and the name of the Proposed Insured.

If all of the Schedule B, Part I-Requirements have not been met within six months after the Commitment Date, this Commitment terminates and the Company's liability and obligation end.

COMMITMENT CONDITIONS

1. DEFINITIONS

(a) "Knowledge" or "Known": Actual or imputed knowledge, but not constructive notice imparted by the Public Records.
(b) "Land": The land described in Schedule A and affixed improvements that by law constitute real property. The term "Land" does not include any property beyond the lines of the area described in Schedule A, nor any right, title, interest, estate, or easement in abutting streets, roads, avenues, alleys, lanes, ways, or waterways, but this does not modify or limit the extent that a right of access to and from the Land is to be insured by the Policy.
(c) "Mortgage": A mortgage, deed of trust, or other security instrument, including one evidenced by electronic means authorized by law.
(d) "Policy": Each contract of title insurance, in a form adopted by the American Land Title Association, issued or to be issued by the Company pursuant to this Commitment.
(e) "Proposed Insured": Each person identified in Schedule A as the Proposed Insured of each Policy to be issued pursuant to this Commitment.
(f) "Proposed Policy Amount": Each dollar amount specified in Schedule A as the Proposed Policy Amount of each Policy to be issued pursuant to this Commitment.
(g) "Public Records": Records established under state statutes at the Commitment Date for the purpose of imparting constructive notice of matters relating to real property to purchasers for value and without Knowledge.
(h) "Title": The estate or interest described in Schedule A.

2. If all of the Schedule B, Part I—Requirements have not been met within the time period specified in the Commitment to Issue Policy, this Commitment terminates and the Company's liability and obligation end.

3. The Company's liability and obligation is limited by and this Commitment is not valid without:
(a) the Notice;
(b) the Commitment to Issue Policy;
(c) the Commitment Conditions;
(d) Schedule A;
(e) Schedule B, Part I—Requirements;
(f) Schedule B, Part II—Exceptions; and
(g) a counter-signature by the company or its issuing agent that may be in electronic form.

4. COMPANY'S RIGHT TO AMEND

The Company may amend this Commitment at any time. If the Company amends this Commitment to add a defect, lien, encumbrance, adverse claim, or other matter recorded in the Public Records prior to the Commitment Date, any liability of the Company is limited by Commitment Condition 5. The Company shall not be liable for any other amendment to this Commitment.

5. LIMITATIONS OF LIABILITY

(a) The Company's liability under Commitment Condition 4 is limited to the Proposed Insured's actual expense incurred in the interval between the Company's delivery to the Proposed Insured of the Commitment and the delivery of the amended Commitment, resulting from the Proposed Insured's good faith reliance to:
  (i) comply with the Schedule B, Part I—Requirements;
  (ii) eliminate, with the Company's written consent, any Schedule B, Part II—Exceptions; or
  (iii) acquire the Title or create the Mortgage covered by this Commitment.
(b) The Company shall not be liable under Commitment Condition 5(a) if the Proposed Insured requested the amendment or had Knowledge of the matter and did not notify the Company about it in writing.
(c) The Company will only have liability under Commitment Condition 4 if the Proposed Insured would not have incurred the expense had the Commitment included the added matter when the Commitment was first delivered to the Proposed Insured.
(d) The Company's liability shall not exceed the lesser of the Proposed Insured's actual expense incurred in good faith and described in Commitment Conditions 5(a)(i) through 5(a)(iii) or the Proposed Policy Amount.
(e) The Company shall not be liable for the content of the Transaction Identification Data, if any.
(f) In no event shall the Company be obligated to issue the Policy referred to in this Commitment unless all of the Schedule B, Part I—Requirements have been met to the satisfaction of the Company.
(g) In any event, the Company's liability is limited by the terms and provisions of the Policy.

Copyright 2006-2016 American Land Title Association. All rights reserved.

The use of this Form (or any derivative thereof) is restricted to ALTA licensees and ALTA members in good standing as of the date of use. All other uses are prohibited. Reprinted under license from the American Land Title Association.

6. LIABILITY OF THE COMPANY MUST BE BASED ON THIS COMMITMENT

(a) Only a Proposed Insured identified in Schedule A, and no other person, may make a claim under this Commitment.
(b) Any claim must be based in contract and must be restricted solely to the terms and provisions of this Commitment.
(c) Until the Policy is issued, this Commitment, as last revised, is the exclusive and entire agreement between the parties with respect to the subject matter of this Commitment and supersedes all prior commitment negotiations, representations, and proposals of any kind, whether written or oral, express or implied, relating to the subject matter of this Commitment.
(d) The deletion or modification of any Schedule B, Part II—Exception does not constitute an agreement or obligation to provide coverage beyond the terms and provisions of this Commitment or the Policy.
(e) Any amendment or endorsement to this Commitment must be in writing and authenticated by a person authorized by the Company.
(f) When the Policy is issued, all liability and obligation under this Commitment will end and the Company's only liability will be under the Policy.

7. IF THIS COMMITMENT HAS BEEN ISSUED BY AN ISSUING AGENT

The issuing agent is the Company's agent only for the limited purpose of issuing title insurance commitments and policies. The issuing agent is not the Company's agent for the purpose of providing closing or settlement services.

8. PRO-FORMA POLICY

The Company may provide, at the request of a Proposed Insured, a pro-forma policy illustrating the coverage that the Company may provide. A pro-forma policy neither reflects the status of Title at the time that the pro-forma policy is delivered to a Proposed Insured, nor is it a commitment to insure.

9. ARBITRATION

The Policy contains an arbitration clause. All arbitrable matters when the Proposed Policy Amount is $2,000,000 or less shall be arbitrated at the option of either the Company or the Proposed Insured as the exclusive remedy of the parties. A Proposed Insured may review a copy of the arbitration rules at http://www.alta.org/arbitration.

Commitment No.: NCS-849456-WT-CO

SCHEDULE B, PART I

Requirements

All of the following Requirements must be met:

1. The Proposed Insured must notify the Company in writing of the name of any party not referred to in this Commitment who will obtain an interest in the Land or who will make a loan on the Land. The Company may then make additional Requirements or Exceptions.

2. Pay the agreed amount for the estate or interest to be insured.

3. Pay the premiums, fees, and charges for the Policy to the Company.

4. Documents satisfactory to the Company that convey the Title or create the Mortgage to be insured, or both, must be properly authorized, executed, delivered, and recorded in the Public Records.

5. Payment of all taxes and assessments now due and payable as shown on a certificate of taxes due from the County Treasurer or the County Treasurer's Authorized Agent.

6. Evidence that all assessments for common expenses, if any, have been paid.

7. Receipt by the Company of an ALTA/NSPS Land Title Survey, certified to First American Title Insurance Company, and in form and content satisfactory to the Company. The Company reserves the right to make further requirements and/or exceptions upon review of this survey.

8. Recordation of the plat of _____.

   NOTE: The Company reserves the right to make further requirements and/or exceptions upon review of the plat map.

9. Release of Second Amended and Restated Memorandum, of Option Agreement recorded June 20, 2017 at Reception No. 2017063705 and First amendment thereto recorded August 3, 2018 at Reception No. 2018071273.

10. Recordation of a Special Warranty Deed satisfactory to the Company, from Cimarron Commercial, LLC, a Colorado limited liability company, vesting fee simple title in and to City of Arvada.

Commitment No.: NCS-849456-WT-CO

SCHEDULE B, PART II

Exceptions

THIS COMMITMENT DOES NOT REPUBLISH ANY COVENANT, CONDITION, RESTRICTION, OR LIMITATION CONTAINED IN ANY DOCUMENT REFERRED TO IN THIS COMMITMENT TO THE EXTENT THAT THE SPECIFIC COVENANT, CONDITION, RESTRICTION, OR LIMITATION VIOLATES STATE OR FEDERAL LAW BASED ON RACE, COLOR, RELIGION, SEX, SEXUAL ORIENTATION, GENDER IDENTITY, HANDICAP, FAMILIAL STATUS, OR NATIONAL ORIGIN.

The Policy will not insure against loss or damage resulting from the terms and provisions of any lease or easement identified in Schedule A, and will include the following Exceptions unless cleared to the satisfaction of the Company:

1. Any facts, rights, interests or claims which are not shown by the Public Records, but which could be ascertained by an inspection of the Land or by making inquiry of persons in possession thereof.

2. Easements, or claims of easements, not shown by the Public Records.

3. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, and any facts which a correct land survey and inspection of the Land would disclose, and which are not shown by the Public Records.

4. Any lien, or right to a lien, for services, labor or material theretofore or hereafter furnished, imposed by law and not shown in the Public Records.

5. Any defect, lien, encumbrance, adverse claim, or other matter that appears for the first time in the Public Records or is created, attaches, or is disclosed between the Commitment Date and the date on which all of the Schedule B, Part I-Requirements are met.

   Note: Exception number 5 will be removed from the policy provided the Company conducts the closing and settlement service for the transaction identified in the commitment.

6. Any and all unpaid taxes, assessments and unredeemed tax sales.

7. Unpatented mining claims; reservations or exceptions in patents or in Acts authorizing the issuance thereof.

8. Any water rights, claims of title to water, in, on or under the Land.

9. Any existing leases or tenancies.

The use of this Form (or any derivative thereof) is restricted to ALTA licensees and ALTA members in good standing as of the date of use. All other uses are prohibited. Reprinted under license from the American Land Title Association.

10. Any fee of assessment due by reason of the inclusion of the subject property within the Jefferson Center Metropolitan District No. 1, as evidenced by Order and Decree creating district, recorded October 25, 1989 at Reception No. 89092217.

    NOTE: Order of Exclusion recorded March 6, 2000 at Reception No. F1024232.

11. Terms, conditions, provisions, obligations and agreements as set forth in the Agreement for Possession and Use of Easement recorded December 12, 1994 at Reception No. 94191021.

12. Terms, conditions, provisions, obligations and agreements as set forth in the Rule and Order and Judgement Conveying Certain property Rights in the Property Owned by Glenn Young & Company recorded February 6, 1996 at Reception No. F0182498.

13. The effect of the inclusion of the subject property in the North Jeffco Park and Recreation District as disclosed by the instrument recorded November 20, 2000 at Reception No. F1146422.

14. Any fee or assessment due by reason of the inclusion of the subject property in the Arvada Fire Protection District as evidenced by Amended Order recorded May 16, 2001 at Reception No. F1237241. Order of Inclusion recorded June 21, 2018 at Reception No. 2018056416

15. Terms, conditions, provisions, and obligations set out in Development Agreement Pertaining to Vested Rights for Vauxmont recorded November 16, 2005 at Reception No. 2005115232, and First Amendment recorded September 20, 2010 at Reception No. 2010081848, Second Amendment recorded July 30, 2015 at Reception No. 2015079968.

16. Terms, conditions, provisions, agreements and obligations specified under the Indemnification Agreement recorded May 11, 2006 at Reception No. 2006056332.

17. Terms, conditions, provisions, agreements and obligations specified under the First Amendment to NonTributary Groundwater Purchase Agreement recorded May 11, 2006 at Reception No. 2006056337.

18. Mineral rights as conveyed by Mineral Quitclaim recorded August 15, 2006 at Reception No. 2006099766, and any and all assignments thereof or interests therein.

19. An easement for water lines, sewer lines and incidental purposes granted to the City of Arvada, as set forth in an instrument recorded March 9, 2010 at Reception No. 2010020937.

20. Terms, conditions, provisions, obligations and agreements as set forth in the Amended and Restated Agreement for Lease and Donation and Dedication of Land recorded January 6, 2011 at Reception No. 2011001924.

    NOTE: Consent and Subordination in connection therewith recorded August 21, 2013 at Reception No. 2013103083.

21. Terms, conditions, provisions, obligations and agreements as set forth in the Second Amended and Restated Memorandum, of Option Agreement recorded June 20, 2017 at Reception No. 2017063705. First amendment thereto recorded August 3, 2018 at Reception No. 2018071273.

22. Terms, conditions, provisions, obligations and agreements as set forth in the Declaration of Master Design Review Covenants for Candelas Commercial recorded November 17, 2017 at Reception No.

DISCLOSURE STATEMENT

Pursuant to C.R.S. 30-10-406(3)(a) all documents received for recording or filing in the Clerk and Recorder's office shall contain a top margin of at least one inch and a left, right and bottom margin of at least one-half of an inch. The Clerk and Recorder will refuse to record or file any document that does not conform to the requirements of this section.

NOTE: If this transaction includes a sale of the property and the price exceeds $100,000.00, the seller must comply with the disclosure/withholding provisions of C.R.S. 39-22-604.5 (Nonresident withholding).

NOTE: Colorado Division of Insurance Regulations 8-1-2 requires that "Every title insurance company shall be responsible to the proposed insured(s) subject to the terms and conditions of the title commitment, other than the effective date of the title commitment, for all matters which appear of record prior to the time of recording whenever the title insurance company, or its agent, conducts the closing and settlement service that is in conjunction with its issuance of an owner's policy of title insurance and is responsible for the recording and filing of legal documents resulting from the transaction which was closed.

Pursuant to C.R.S. 10-11-122, the company will not issue its owner's policy or owner's policies of title insurance contemplated by this commitment until it has been provided a Certificate of Taxes due or other equivalent documentation from the County Treasurer or the County Treasurer's authorized agent; or until the Proposed Insured has notified or instructed the company in writing to the contrary.

The subject property may be located in a special taxing district. A Certificate of Taxes due listing each taxing jurisdiction shall be obtained from the County Treasurer or the County Treasurer's authorized agent. Information regarding special districts and the boundaries of such districts may be obtained from the Board of County Commissioners, the County Clerk and Recorder, or the County Assessor.

NOTE: Pursuant to CRS 10-11-123, notice is hereby given:

This notice applies to owner's policy commitments containing a mineral severance instrument exception, or exceptions, in Schedule B, Section 2.

A. **That there is recorded evidence that a mineral estate has been severed, leased, or otherwise conveyed from the surface estate and that there is a substantial likelihood that a third party holds some or all interest in oil, gas, other minerals, or geothermal energy in the property; and**
B. **That such mineral estate may include the right to enter and use the property without the surface owner's permission.**

NOTE: Pursuant to Colorado Division of Insurance Regulations 8-1-2, Affirmative mechanic's lien protection for the Owner may be available (typically by deletion of Exception no. 4 of Schedule B, Section 2 of the Commitment from the Owner's Policy to be issued) upon compliance with the following conditions:

A. **The land described in Schedule A of this commitment must be a single family residence which includes a condominium or townhouse unit.**
B. **No labor or materials have been furnished by mechanics or material-men for purposes of construction on the land described in Schedule A of this Commitment within the past 6 months.**
C. **The Company must receive an appropriate affidavit indemnifying the Company against un-filed mechanic's and material-men's liens.**
D. **The Company must receive payment of the appropriate premium**.
E. **If there has been construction, improvements or major repairs undertaken on the property to be purchased within six months prior to the Date of the Commitment, the**

requirements to obtain coverage for unrecorded liens will include: disclosure of certain construction information; financial information as to the seller, the builder and or the contractor; payment of the appropriate premium, fully executed Indemnity Agreements satisfactory to the company, and, any additional requirements as may be necessary after an examination of the aforesaid information by the Company.

No coverage will be given under any circumstances for labor or material for which the insured has contracted for or agreed to pay.

NOTE: Pursuant to C.R.S. 38-35-125(2) no person or entity that provides closing and settlement services for a real estate transaction shall disburse funds as a part of such services until those funds have been received and are available for immediate withdrawal as a matter of right.

NOTE: C.R.S. 39-14-102 requires that a real property transfer declaration accompany any conveyance document presented for recordation in the State of Colorado. Said declaration shall be completed and signed by either the grantor or grantee.

NOTE: Pursuant to CRS 10-1-128(6)(a), It is unlawful to knowingly provide false, incomplete, or misleading facts or information to an insurance company for the purpose of defrauding or attempting to defraud the company. Penalties may include imprisonment, fines, denial of insurance and civil damages. Any insurance company or agent of an insurance company who knowingly provides false, incomplete, or misleading facts or information to a policyholder or claimant for the purpose of defrauding or attempting to defraud the policyholder or claimant with regard to a settlement or award payable from insurance proceeds shall be reported to the Colorado division of insurance within the department of regulatory agencies.

NOTE: Pursuant to Colorado Division of Insurance Regulations 8-1-3, notice is hereby given of the availability of an ALTA Closing Protection Letter which may, upon request, be provided to certain parties to the transaction identified in the commitment.

Nothing herein contained will be deemed to obligate the company to provide any of the coverages referred to herein unless the above conditions are fully satisfied.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

SPECIAL WARRANTY DEED

CIMARRON HOLDING COMPANY, LLC, a Colorado limited liability company ("Grantor"), whose street address is 10050 Wadsworth Blvd., Westminster, Colorado 80021, for the consideration of Ten Dollars ($10.00) and other good and valuable consideration, in hand paid, hereby sells and conveys to CIMARRON COMMERCIAL, LLC, a Colorado limited liability company, whose street address is 10050 Wadsworth Blvd., Westminster, Colorado 80021, the real property in the County of Jefferson and State of Colorado (collectively, the "**Real Property**"), consisting of:

1. The land described on Exhibit A attached hereto (the "**Land**");
2. Any and all easements, rights-of-way and other property interests appurtenant or relating to the Land that Grantor owns or may own, including, without limitation, all right, title and interest of Grantor, if any, in and to the land lying within any street or roadway adjoining the Land or any vacated or hereafter vacated street or alley adjoining the Land;
3. Any and all tributary, nontributary and not-nontributary water rights that Seller owns or may own and which are appurtenant to or historically used in connection with the Land, whether decreed or undecreed, including, without limitation, all groundwater underlying the Land, all surface water located within or used in connection with the Land, and/or any ditch shares or ditch rights used in connection with the Land;
4. Any and all right, title and interest of Grantor in subsurface estates and mineral rights located in, upon and/or under the Land, including, without limitation, any rights to explore for and/or extract, or to be paid royalties in connection therewith, oil, natural gas, gravel, sand, coal, and/or hard rock minerals; and
5. Any and all improvements and fixtures owned by Grantor and located in, upon and under the Land.

Grantor warrants the title to the Real Property against all persons claiming under Grantor, subject to the matters set forth on Exhibit B attached hereto and made a part hereof.

Exhibit A

(Legal Description of the Real Property)

TRACTS OF LAND LOCATED IN SECTIONS 21, 22, 23 AND 26, T2S, R70W OF THE SIXTH PRINCIPAL MERIDIAN; COUNTY OF JEFFERSON, STATE OF COLORADO; BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:

CONSIDERING THE WEST LINE OF THE NORTHWEST QUARTER OF SAID SECTION 21 TO BEAR N00°03'10"W (ENDS OF SAID LINES MONUMENTED AS SHOWN ON THIS PLAT) WITH ALL OTHER BEARINGS CONTAINED HEREIN RELATIVE THERETO:

TRACT 1

COMMENCING AT SAID WEST QUARTER CORNER OF SECTION 21; THENCE ALONG THE WEST LINE OF THE NORTHWEST QUARTER OF SAID SECTION, N00°03'10"W, 217.09 FEET TO THE POINT OF BEGINNING;
THENCE CONTINUING ALONG SAID WEST LINE, N00°03'10"W, 745.05 FEET TO A POINT ON THE SOUTHWESTERLY RIGHT OF WAY LINE OF STATE HIGHWAY NO. 93;
THENCE ALONG SAID RIGHT OF WAY LINE THE FOLLOWING FIVE (5) COURSES:
1. S56°01'44"E, 223.24 FEET;
2. S29°23'58"E, 206.60 FEET;
3. S35°15'05"E, 327.13 FEET;
4. S22°58'56"E, 77.96 FEET;
5. S34°45'49"E, 117.94 FEET;
THENCE S89°32'53"W, 572.38 FEET TO THE POINT OF BEGINNING;

TRACT 2

BEGINNING AT THE NORTHWEST CORNER OF SAID SECTION 21; THENCE N89°45'29"E, 1236.70 FEET ALONG THE NORTH LINE OF SAID SECTION;
THENCE ALONG THE WEST LINE OF THE UNION PACIFIC RAILROAD AS DESCRIBED IN BOOK 769 AT PAGE 309, S03°58'12"W, 1726.64 FEET TO A POINT ON THE NORTHERLY RIGHT OF WAY LINE OF STATE HIGHWAY NO. 72;
THENCE ALONG SAID NORTHERLY RIGHT OF WAY AND ALONG THE EASTERLY RIGHT OF WAY OF STATE HIGHWAY NO. 93 THE FOLLOWING SIX (6) COURSES:
1. N80°52'00"W, 779.83 FEET;
2. N42°35'08"W, 278.81 FEET;
3. N15°20'50"W, 485.59 FEET;
4. ALONG A CURVE TO THE RIGHT HAVING AN ARC LENGTH OF 383.62 FEET, A RADIUS OF 2815.00 FEET, A CENTRAL ANGLE OF 7°48'29" AND A CHORD WHICH BEARS N03°52'09"W, 383.32 FEET;
5. N01°22'01"W, 159.49 FEET;
6. ALONG THE WEST LINE OF SECTION 21 N00°03'10"W, 378.05 FEET TO THE POINT OF BEGINNING.

TRACT 3

BEGINNING AT A POINT ON THE SOUTH LINE OF THE NORTHWEST QUARTER OF SECTION 21 FROM WHENCE THE WEST QUARTER CORNER OF SAID SECTION BEARS

S89°34'40"W, 1050.10 FEET, SAID POINT BEING ON THE WESTERLY RIGHT OF WAY LINE OF THE UNION PACIFIC RAILROAD;
THENCE ALONG SAID RIGHT OF WAY AND ALONG A CURVE TO THE RIGHT HAVING AN ARC LENGTH OF 214.97 FEET, A RADIUS OF 904.94 FEET, A CENTRAL ANGLE OF 13°36'38" AND A CHORD WHICH BEARS S10°46'31"W, 214.46 FEET;
THENCE ALONG THE NORTHEASTERLY RIGHT OF WAY LINE OF STATE HIGHWAY NO. 93 THE FOLLOWING FIVE (5) COURSES:
1. N34°24'21"W, 558.07 FEET;
2. N35°50'01"W, 212.37 FEET;
3. N29°08'51"W, 382.14 FEET;
4. N19°59'14"W, 60.00 FEET;
5. N06°13'50"E, 100.00 FEET;
THENCE ALONG THE SOUTHERLY RIGHT OF WAY OF STATE HIGHWAY NO. 72, S83°46'59"E, 737.60 FEET TO A POINT ON THE WESTERLY RIGHT OF WAY LINE OF SAID RAILROAD;
THENCE ALONG SAID WESTERLY RIGHT OF WAY LINE, S03°58'12"W, 833.60 FEET TO THE POINT OF BEGINNING.

TRACT 4

BEGINNING AT THE WEST SIXTEENTH CORNER (SOUTHEAST CORNER OF THE WEST HALF OF THE NORTHWEST QUARTER) OF SAID SECTION 21;
THENCE S00°10'23"E, 572.09 FEET TO A POINT ON THE WESTERLY RIGHT-OF-WAY LINE OF THE SOUTH BOULDER DIVERSION DITCH;
THENCE ALONG SAID RIGHT-OF-WAY LINE, S30°43'19"W, 62.54 FEET TO A POINT ON THE NORTHEASTERLY RIGHT-OF-WAY LINE OF STATE HIGHWAY NO. 93;
THENCE ALONG SAID HIGHWAY RIGHT-OF-WAY LINE, N34°24'22"W, 377.49 FEET TO A POINT ON THE EASTERLY RIGHT OF WAY OF THE UNION PACIFIC RAILROAD SPUR;
THENCE ALONG SAID LINE THE FOLLOWING TWO (2) COURSES:
1. ALONG A CURVE TO THE LEFT HAVING AN ARC LENGTH OF 314.71 FEET, A RADIUS OF 1004.94 FEET, A CENTRAL ANGLE OF 17°56'34" AND A CHORD WHICH BEARS N12°56'29"E, 313.42 FEET;
2. N03°58'12"E, 829.68 FEET TO A POINT ON THE SOUTHERLY RIGHT OF WAY LINE OF STATE HIGHWAY NO. 72;
THENCE ALONG SAID LINE, S83°46'59"E, 113.97 FEET;
THENCE ALONG THE EAST LINE OF THE WEST HALF OF THE NORTHWEST QUARTER OF SAID SECTION 21, S00°11'02"E, 806.41 FEET TO THE POINT OF BEGINNING.

TRACT 7

BEGINNING AT THE EAST QUARTER CORNER OF SECTION 21;
THENCE ALONG THE EAST LINE OF SAID SECTION 21 S00°29'32"E, 721.92 FEET TO A POINT ON THE NORTHERLY RIGHT-OF-WAY LINE OF THE UNION PACIFIC RAILROAD;
THENCE ALONG SAID RIGHT-OF-WAY LINE THE FOLLOWING THREE (3) COURSES;
1. N80°34'08"W, 832.89 FEET;
2. ALONG A SPIRAL CURVE TO THE LEFT 244.21 FEET, SAID SPIRAL HAVING AN ENDING RADIUS OF 2915.00 FEET, A THETA VALUE OF 02°24'01" AND A CHORD BETWEEN BEGIN AND END POINTS WHICH BEARS N81°22'08"W, 244.21 FEET;
3. ALONG A CURVE TO THE LEFT HAVING AN ARC LENGTH OF 263.03 FEET, A RADIUS OF 2915.00 FEET, A CENTRAL ANGLE OF 05°10'12" AND A CHORD WHICH BEARS N85°33'15"W, 262.94 FEET;

THENCE ALONG THE WEST LINE OF THE EAST HALF OF THE EAST HALF OF SECTION 21, N00°24'04"W, 518.58 FEET TO THE EAST SIXTEENTH CORNER OF SECTION 21;
THENCE CONTINUING ALONG SAID WEST LINE, N00°22'32"W, 510.48 FEET TO A POINT ON THE SOUTHERLY RIGHT OF WAY LINE OF STATE HIGHWAY NO. 72;
THENCE ALONG SAID RIGHT OF WAY LINE, S83°48'25"E, 1330.66 FEET;
THENCE ALONG THE EAST LINE OF SECTION 21, S00°29'55"E, 357.11 FEET TO THE POINT OF BEGINNING.

TRACT 9

BEGINNING AT A POINT ON THE NORTH LINE OF SECTION 26 FROM WHENCE THE NORTH QUARTER CORNER OF SECTION 26 BEARS S89°50'39"W, 927.82 FEET;
THENCE ALONG SAID NORTH LINE N89°50'39"E, 598.91 FEET TO A POINT ON THE SOUTHWESTERLY RIGHT OF WAY OF STATE HIGHWAY NO. 72;
THENCE ALONG SAID RIGHT OF WAY LINE, S49°55'39"E, 1206.15 FEET;
THENCE ALONG THE NORTHEASTERLY RIGHT OF WAY LINE OF THE UNION PACIFIC RAILROAD, N63°01'05"W, 1707.79 FEET TO THE POINT OF BEGINNING.

TRACT 10

LOT C OF ROCKY FLATS INDUSTRIAL DISTRICT FILING NO. 1, AS RECORDED IN BOOK 32, PAGE 25, MAP NO. 24 IN THE JEFFERSON COUNTY RECORDS.

Exhibit B

(Permitted Exceptions)

1. Taxes and assessments for the year 2006 and subsequent years, a lien not yet due and payable.

2. Water rights, claims or title to water, whether or not shown by the public records.

3. An easement for electric transmission lines and incidental purposes granted to The Eastern Colorado Power Company by the instrument recorded February 3, 1909 in Book 153 at Page 253 and Assignment to The Colorado Power Company recorded May 31, 1913 in Book 173 at Page 318 and Assignment to Public Service Company of Colorado recorded October 16, 1924 in Book 270 at Page 137. (Affects Tracts 6 and 7 – Land Plan)

4. Underground natural gas transmission lines as disclosed by Map recorded September 30, 1981 at Reception No. 81071919.

5. Reservation of one-half of all clay, gravel, rock and deposits, and one-half of all coal, oil, gas and other minerals and mineral rights in, on or under subject property, together with the right to drill, test and prospect for, develop, mine, excavate and remove the same by any method whatsoever, and the right to use so much of the surface as may be reasonably necessary or expedient for said purposes, including, but not by way of limitation, the right of ingress, egress and regress and the right to construct, maintain and operate railways, tramways, roads, telephones, telegraph and power lines and all buildings and structures deemed necessary as reserved by Paul V. Pattridge in Deed recorded July 31, 1950 in Book 683 at Page 375. (Affects Tract 9.)

6. Reservation of all natural gas and oil rights as contained in instrument recorded March 31, 1986 at Reception No. 86031985, and any and all assignments thereof or interests therein. (Affects Tract 9.)

7. Reservation of (1) all coal and other minerals within or underlying said lands, (2) the exclusive right to prospect in and upon said land for coal and other minerals, and to mine for and remove from said land all coal and other minerals, and (3) the right of ingress, egress and regress upon said land to prospect for, mine and remove coal and other minerals, and (4) the right to maintain and operate its railroad in the present form of construction, and to make any change in the form of construction and method of operation of said railroad, as contained in Deed from the Union Pacific Railroad Company recorded November 21, 1900 in Book 114 at Page 300. (Affects Tracts 3 and 4.)
   NOTE: Relinquishment of Surface Rights by Deed recorded July 3, 1970 in Book 2192 at Page 206.
   NOTE: By an instrument recorded April 14, 1974 in Book 2251 at Page 796, the Union Pacific Railroad Company conveyed portions of its coal rights to the Union Pacific Land Resources Company.

8. Reservation of the right and ownership to all oil or gas which may underlie said real estate, or any portion thereof, and also the right to prospect any portion of said property for gas and oil and to construct and operate such gas and oil wells as he may desire to do on said property; the said prospecting, constructing and operating of said oil and gas wells on said property to be done in the customary manner and at such times as the said party of the first part may elect, as reserved in an instrument recorded September 24, 1910 in Book 165 at Page 306, and any and all assignments thereof or interests therein. (Affects Tracts 3 and 4.)

9. Reservation of all coal that may be underneath the surface of said land, such right of way and other grounds as may be necessary for the proper working of any coal mines that may be developed upon said land and for the transportation of the coal from the same, as contained in the Deed from the Union Pacific Railway Company recorded March 3, 1892 in Book 71 at Page 45. (Affects Tracts 1, 2, 3, 4, 5, 6 and 7 – Land Plan and Supplemental)
NOTE: The above coal reservation affecting portions of said property re-conveyed and relinquishment of surface rights in other portions by Deed recorded July 3, 1970 in Book 2192 at Page 206. (Only those portions of Tracts 6 & 7 lying in the East ½ of Section 21 were conveyed to the fee owner by this deed.)
NOTE: By an instrument recorded April 14, 1974 in Book 2251 at Page 796, the Union Pacific Railroad Company conveyed portions of its coal rights to the Union Pacific Resources Company.

10. An easement for electric transmission lines and incidental purposes granted to the Union Rural Electric Association by the instrument recorded October 13, 1971 in Book 2307 at Page 520. (Affects Tracts 4 and 5 – Land Plan)

11. Terms, conditions, provisions, agreements, obligations and easements specified under the Easement Agreement – Reservoir Expansion Area and Access recorded May 21, 1987 at Reception No. 87067111. (Affects Tracts 2, 5 and 6 – Land Plan and Supplemental)
NOTE: Assignment and Easement Agreement recorded June 5, 2003 at Reception No. F1769735.

12. Each and every right or rights of access to and from any part of highway adjoining subject property as granted to the Department of Highways, State of Colorado by instrument recorded May 23, 1988 at Reception No. 88049629. (Affects Tracts 1, 2 and 3 – Land Plan)

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Waste Engineering, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EDR® Environmental Data Resources Inc

BUILD FAX PROPERTY HISTORY

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Waste Engineering, Inc. on Apr 27, 2020.

TARGET PROPERTY

9450 State Highway 93
Arvada, CO 80007

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

Proposed Use:	
Permit Number:	S12-0143
Status:	ISSUED
Valuation:	$0.00
Contractor Company:	
Contractor Name:	YESCO LLC

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

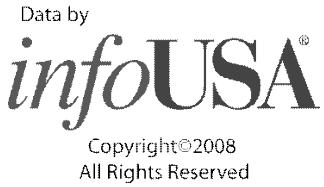
EXECUTIVE SUMMARY



DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

The EDR Property Tax Map Report

Environmental Data Resources Inc

6 Armstrong Road
Shelton, CT 06484
800.352.0050
www.edrnet.com

EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

NO COVERAGE

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. X3. USER QUESTIONNAIRE RESPONSE: CITY OF ARVADA
ASTM Form E1527 - 13
April 27, 2020

(1) No

(2) No

(3) Property has been vacant ranch land until 2012, when a pump house owned and operated by the City of Arvada was built.

(4) Purchase price is in line with current assessed value as determined by the City's assessment contractor.

(5) a. The property has been vacant until 2012 when the Pump House was built.
b. The property has been vacant until 2012 when the Pump House was built.
c. No
d. No

(6) No releases have been reported at the property. An area railroad track is located downgrade and sufficient distance from the property border to not affect the property.

X3. USER QUESTIONNAIRE

INTRODUCTION

In order to qualify for one of the *Landowner Liability Protections (LLPs)*[187] offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"),[188] the *user* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The *user* should provide the following information to the *environmental professional*. Failure to conduct these inquiries could result in a determination that "*all appropriate inquiries*" is not complete.

(1.) Environmental liens that are filed or recorded against the *property* (40 CFR 312.25).
Did a search of *recorded land title records* (or judicial records where appropriate, see Note 1 below) identify any environmental liens filed or recorded against the *property* under federal, tribal, state or local law?

NOTE 1—In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

(2.) Activity and use limitations that are in place on the *property* or that have been filed or recorded against the *property* (40 CFR 312.26(a)(1)(v) and vi)).
Did a search of *recorded land title records* (or judicial records where appropriate, see Note 1 above) identify any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the *property* and/or have been filed or recorded against the *property* under federal, tribal, state or local law?

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).
Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an *adjoining property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?

(4.) Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).
Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?

(5.) Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30).
Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example,
(a.) Do you know the past uses of the *property*?
(b.) Do you know of specific chemicals that are present or once were present at the *property*?
(c.) Do you know of spills or other chemical releases that have taken place at the *property*?
(d.) Do you know of any environmental cleanups that have taken place at the *property*?

(6.) The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).
Based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of releases at the *property*?

---

[187] *Landowner Liability Protections*, or *LLPs*, is the term used to describe the three types of potential defenses to Superfund liability in EPA's *Interim Guidance Regarding Criteria Landowners Must Meet in Order to Qualify for Bona Fide Prospective Purchaser, Contiguous Property Owner, or Innocent Landowner Limitations on CERCLA Liability* ("*Common Elements*" Guide) issued on March 6, 2003.
[188] P.L. 107-118.

X3.1 In addition, certain information should be collected, if available, and provided to the *environmental professional* conducting the *Phase I Environmental Site Assessment*. This information is intended to assist the *environmental professional*, but is not necessarily required to qualify for one of the *LLPs*. The information includes:

(a) the reason why the Phase I is being performed,

(b) the type of *property* and type of *property* transaction, for example, sale, purchase, exchange, etc.,

(c) the complete and correct address for the *property* (a map or other documentation showing *property* location and boundaries is helpful),

Owner Questionnaire

Description of Site: Address:
9450 State Highway 93

Sleeping Indian Tank and Pump Site

Jennifer Keyes with WEI verbally went through the questionnaire with Charlie McKay on April 13, 2020

Question	Owner[7]			Occupants (if applicable)			Observed During Site Visit	
1a. Is the *property* used for an industrial use?	Yes	No	Unk	Yes	No	Unk	Yes	No
1b. Is any *adjoining property* used for an industrial use?	Yes	No	Unk	Yes	No	Unk	Yes	No
2a. Did you observe evidence or do you have any prior knowledge that the *property* has been used for an industrial use in the past?	Yes	No	Unk	Yes	No	Unk	Yes	No
2b. Did you observe evidence or do you have any prior knowledge that any *adjoining property* has been used for an industrial use in the past?	Yes	No	Unk	Yes	No	Unk	Yes	No
3a. Is the *property* used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes	No	Unk	Yes	No	Unk	Yes	No
3b. Is any *adjoining property* used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes	No	Unk	Yes	No	Unk	Yes	No
4a. Did you observe evidence or do you have any prior knowledge that the *property* has been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes	No	Unk	Yes	No	Unk	Yes	No
4b. Did you observe evidence or do you have any prior knowledge that any *adjoining property* has been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes	No	Unk	Yes	No	Unk	Yes	No
5a. Are there currently any damaged or discarded automotive or industrial batteries, pesticides, paints, or other chemicals in individual containers of >5 gal (19 L) in volume or 50 gal (190 L) in the aggregate, stored on or used at the *property* or at the facility?	Yes	No	Unk	Yes	No	Unk	Yes	No

Question	Owner[7]			Occupants (if applicable)			Observed During Site Visit	
5b. Did you observe evidence or do you have any prior knowledge that there have been previously any damaged or discarded automotive or industrial batteries, or pesticides, paints, or other chemicals in individual containers of >5 gal (19 L) in volume or 50 gal (190 L) in the aggregate, stored on or used at the *property* or at the facility?	Yes	No	Unk	Yes	No	Unk	Yes	No
6a. Are there currently any industrial *drums* (typically 55 gal (208 L)) or sacks of chemicals located on the property or at the facility?	Yes	No	Unk	Yes	No	Unk	Yes	No
6b. Did you observe evidence or do you have any prior knowledge that there have been previously any industrial *drums* (typically 55 gal (208 L)) or sacks of chemicals located on the property or at the facility?	Yes	No	Unk	Yes	No	Unk	Yes	No
7a. Did you observe evidence or do you have any prior knowledge that *fill dirt* has been brought onto the property that originated from a contaminated site?	Yes	No	Unk	Yes	No	Unk	Yes	No
7b. Did you observe evidence or do you have any prior knowledge that *fill dirt* has been brought onto the property that is of an unknown origin?	Yes	No	Unk	Yes	No	Unk	Yes	No
8a. Are there currently any *pits, ponds,* or *lagoons* located on the *property* in connection with waste treatment or waste disposal?	Yes	No	Unk	Yes	No	Unk	Yes	No
8b. Did you observe evidence or do you have any prior knowledge that there have been previously, any *pits, ponds,* or *lagoons* located on the *property* in connection with waste treatment or waste disposal?	Yes	No	Unk	Yes	No	Unk	Yes	No
9a. Is there currently any stained soil on the *property*?	Yes	No	Unk	Yes	No	Unk	Yes	No
9b. Did you observe evidence or do you have any prior knowledge that there has been previously, any stained soil on the *property*?	Yes	No	Unk	Yes	No	Unk	Yes	No
10a. Are there currently any registered or unregistered storage tanks (above or underground) located on the *property*?	Yes	No	Unk	Yes	No	Unk	Yes	No
10b. Did you observe evidence or do you have any prior knowledge that there have been previously, any registered or unregistered storage tanks (above or underground) located on the *property*?	Yes	No	Unk	Yes	No	Unk	Yes	No
11a. Are there currently any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the *property* or adjacent to any structure located on the *property*?	Yes	No	Unk	Yes	No	Unk	Yes	No
11b. Did you observe evidence or do you have any prior knowledge that there have been previously, any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the *property* or adjacent to any structure located on the *property*?	Yes	No	Unk	Yes	No	Unk	Yes	No
12a. Is there currently evidence of leaks, spills or staining by substances other than water, or foul odors, associated with any flooring, drains, walls, ceilings, or exposed grounds on the property?	Yes	No	Unk	Yes	No	Unk	Yes	No

Question	Owner[7]			Occupants (if applicable)			Observed During Site Visit	
12b. Did you observe evidence or do you have any prior knowledge that there have been previously any leaks, spills, or staining by substances other than water, or foul odors, associated with any flooring drains, walls, ceilings or exposed grounds on the property?	Yes	No	Unk	Yes	No	Unk	Yes	No
13a. If the property is served by a private well or non-public water system, is there evidence or do you have prior knowledge that contaminants have been identified in the well or system that exceed guidelines applicable to the water system?	Yes	No	Unk	Yes	No	Unk	Yes	No
13b. If the property is served by a private well or non-public water system, is there evidence or do you have prior knowledge that the well has been designated as contaminated by any government environmental/health agency?	Yes	No	Unk	Yes	No	Unk	Yes	No
14. Does the *owner* or *occupant* of the *property* have any knowledge of *environmental liens* or governmental notification relating to past or recurrent violations of environmental laws with respect to the *property* or any facility located on the *property*?	Yes	No	Unk	Yes	No	Unk		
15a. Has the *owner* or *occupant* of the *property* been informed of the past existence of *hazardous substances* or *petroleum products* with respect to the *property* or any facility located on the *property*?	Yes	No	Unk	Yes	No	Unk		
15b. Has the *owner* or *occupant* of the *property* been informed of the current existence of *hazardous substances* or *petroleum products* with respect to the *property* or any facility located on the *property*?	Yes	No	Unk	Yes	No	Unk		
15c. Has the *owner* or *occupant* of the *property* been informed of the past existence of environmental violations with respect to the *property* or any facility located on the *property*?	Yes	No	Unk	Yes	No	Unk		
15d. Has the *owner* or *occupant* of the *property* been informed of the current existence of environmental violations with respect to the *property* or any facility located on the *property*?	Yes	No	Unk	Yes	No	Unk		
16. Does the *owner* or *occupant* of the *property* have any knowledge of any *environmental site assessment* of the *property* or facility that indicated the presence of *hazardous substances* or *petroleum products* on, or contamination of, the *property* or recommended further assessment of the *property*?	Yes	No	Unk	Yes	No	Unk		
17. Does the *owner* or *occupant* of the *property* know of any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any *hazardous substance* or *petroleum products* involving the *property* by any owner or occupant of the *property*?	Yes	No	Unk	Yes	No	Unk		
18a. Does the *property* discharge waste water (not including sanitary waste or storm water) onto or adjacent to the *property* and/or into a storm water system?	Yes	No	Unk	Yes	No	Unk	Yes	No

Question	Owner[7]			Occupants (if applicable)			Observed During Site Visit	
18b. Does the *property* discharge waste water (not including sanitary waste or storm water) onto or adjacent to the *property* and/or into a sanitary sewer system?	Yes	No	Unk	Yes	No	Unk	Yes	No
19. Did you observe evidence or do you have any prior knowledge that any *hazardous substances* or *petroleum products*, unidentified waste materials, tires, automotive or industrial batteries, or any other waste materials have been dumped above grade, buried and/or burned on the *property*?	Yes	No	Unk	Yes	No	Unk	Yes	No
20. Is there a transformer, capacitor, or any hydraulic equipment for which there are any records indicating the presence of PCBs?	Yes	No	Unk	Yes	No	Unk	Yes	No

Government Records/Historical Sources Inquiry

(See guide, Section 10)

21. Do any of the following Federal government record systems list the property or any property within the search distance noted below:

	Approximate Minimum Search Distance, miles (kilometers)		
Federal NPL site list	1.0 (1.6)	Yes	No
Federal CERCLIS list	0.5 (0.8)	Yes	No
Federal CERCLIS NFRAP site list	property and adjoining properties	Yes	No
Federal RCRA CORRACTS facilities list	1.0 (1.6)	Yes	No
Federal RCRA non-CORRACTS TSD facilities list	0.5 (0.8)	Yes	No
Federal RCRA generators list	property and adjoining properties	Yes	No
Federal ERNS list	property only	Yes	No

22. Do any of the following state record systems list the property or any property within the search distance noted below:

	Approximate Minimum Search Distance, miles (kilometers)		
State lists of hazardous waste sites identified for investigation or remediation:			
State — Equivalent NPL	1.0 (1.6)	Yes	No
State — Equivalent CERCLIS	0.5 (0.8)	Yes	No
State landfill and/or solid waste disposal site lists	0.5 (0.8)	Yes	No
State leaking UST lists	0.5 (0.8)	Yes	No
State registered UST lists	property and adjoining properties	Yes	No

23. Based upon a review of *fire insurance maps* 10.3.1.3 or consultation with the local fire department serving the *property*, all as specified in the guide, are any buildings or other improvements on the *property* or on an *adjoining property* identified as having been used for an industrial use or uses likely to lead to contamination of the *property*? Yes No

The *preparer* of the *transaction screen questionnaire* must complete and sign the following. (For definition of "preparer" and "user," see 5.3 or 3.3.28.)

Mr. McKay is aware that Coors in the past dumped their surplus beer on their property to the southeast of the Target Site. The former Rocky Flats is to the north of theTarget Site; however, there is a major drainageway, Woman Creek, between the former Rocky Flats Site and Target Site. The Target Site is upgradient and upwind of the former Rocky Flats Site. No fill on Target Site. The Target Site has been owned by the Church/McKay Family for over 100 years and used for agricultural purposes.

The *Owner* questionnaire was completed by:

To: Cliff Deeds <cliff-d@arvada.org>
Subject: Sleeping Indian Genset

Hi Cliff,

Here is some info on the Genset at Sleeping Indian. It states the max fuel capacity is 1488 Liters (393 Gallons). I also attached some general generator info. Hopefully this is what you're looking for.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless

information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/30/2020 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
ADOLPH COORS INC. Site ID: 0800179 EPA Id: COD980499107	HWY 72 & 93	S 0 - 1/8 (0.118 mi.)	A2	9

Federal RCRA generators list

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 12/16/2019 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

SHWS: This state does not maintain a SHWS list. See the Federal CERCLIS list and Federal NPL list.

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

TRUST: Lust Trust Sites
Reimbursement application package. The 1989 Colorado General Assembly established Colorado's Petroleum Storage Tank Fund. The Fund reimburses eligible applicants for allowable costs incurred in cleaning up petroleum contamination from underground and aboveground petroleum storage tanks, as well as for third-party liability expenses. Remediation of contamination caused by railroad or aircraft fuel is not eligible for reimbursement. The Fund satisfies federal Environmental Protection Agency financial assurance requirements. Monies in the Fund come from various sources, predominantly the state environmental surcharge imposed on all petroleum products except railroad or aircraft fuel.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

UMTRA: Uranium Mill Tailings Sites
There were nine uranium mill tailings sites in Colorado designated for cleanup under the federal Uranium Mill Tailings Radiation Control Act. These nine sites, know commonly as UMTRA sites, were remediated jointly by the State of Colorado and the U.S. Department of Energy during the late 1980's and early 1990's. Mill tailings were removed from 8 of the mill sites and relocated in engineered disposal cells. A disposal cell is designed to encapsulate the material, reduce radon emanation, and prevent the movement of water through the material. At one site, Maybell, CO, the tailings were stabilized in-place at the mill site. After remediation of the tailings was completed, the State and DOE began to investigate the residual impacts to groundwater at the mill sites. The groundwater phase of the UMTRA program is on-going.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LF DENVER CO METHANE: Investigation of Methane Gas Hazards

The purpose of this study was to assess the actual and potential generation, migration, explosive and related problem associated with specified old landfills, and to identify existing and potential problems, suggested strategies to prevent, abate, and control such problems and recommend investigative and monitoring functions as may be deemed necessary. Eight sites determined to be priorities due to population density and potential hazards to population and property were selected by the Colorado Department of Health.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 01/30/2020
Date Data Arrived at EDR: 01/30/2020
Date Made Active in Reports: 03/09/2020

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health

Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

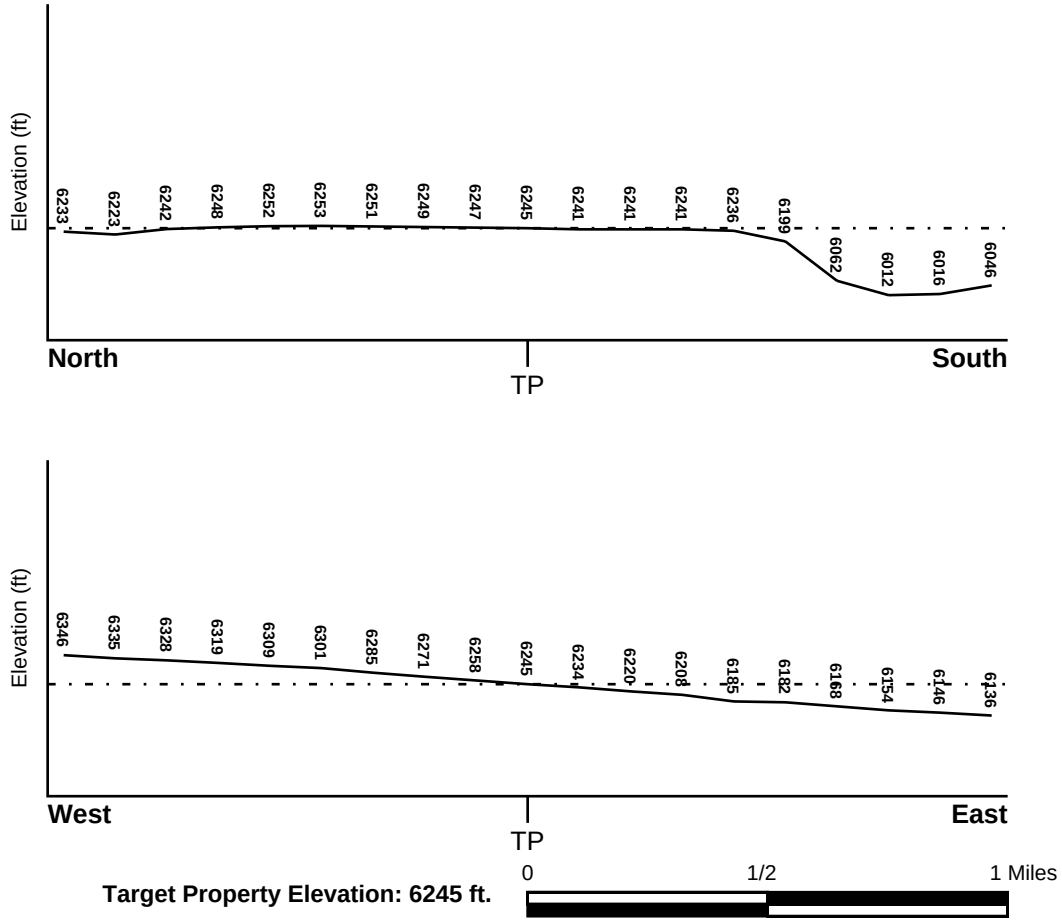
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
08059C0176F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
08059C0050F	FEMA FIRM Flood data
08059C0075F	FEMA FIRM Flood data
08059C0175F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
GOLDEN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Flatirons

Soil Surface Texture: very cobbly sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	12 inches	very cobbly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 14.11 Min: 4.23	Max: 7.8 Min: 6.1
2	12 inches	46 inches	very gravelly clay	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 14.11 Min: 4.23	Max: 7.8 Min: 6.1
3	46 inches	59 inches	very gravelly sandy clay loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 14.11 Min: 4.23	Max: 7.8 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: Nederland

Soil Surface Texture: very cobbly sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	very cobbly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14.11 Min: 1.41	Max: 7.3 Min: 6.1
2	9 inches	59 inches	very cobbly sandy clay loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14.11 Min: 1.41	Max: 7.3 Min: 6.1

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Riparian Vegetation Data

Telephone: 970-416-3360

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Off-Site Lands – Contamination and Risk

To the extent people are concerned about on-site contamination they are equally if not more concerned about off-site contamination. This paper addresses the latter issue.

Contamination Spreads Off-Site

Throughout site operations, and especially during the 1950s through the early 1970s, radioactive and other hazardous materials were released into the environment which, in a few instances, migrated onto off-site lands neighboring Rocky Flats. Contamination included plutonium, tritium, organic solvents (e.g. carbon tetrachloride), and heavy metals. The greatest concentrations are east and south-east of the site, including lands within the municipal boundaries of Arvada, Broomfield and Westminster.

The two primary pathways contaminants moved off site were high winds and surface water flows. Some of the major events which led to the off-site dispersion were:

- During the 1950s and 1960s leaking drums of plutonium-contaminated liquid wastes were stored outside in an area known as the 903 pad. When the Atomic Energy Commission (AEC; a precursor to the Department of Energy) tried to remediate this area in the early 1960s, high winds dispersed the contamination eastwards. While much of it and the highest concentrations remained on-site, low levels spread beyond the site boundary.
- A fire in Building 771 in 1957 released plutonium into the air.
- A fire in Building 776 in 1969 released plutonium into the air.
- Various releases contaminated Walnut and Woman Creeks as they run through Rocky Flats. Some contaminated water moved off-site. As part of the plan to address this problem, in the mid-1970s the AEC built water settling and holding ponds.

Radioactive contamination that migrated off-site by high winds and surface water is found in surface soils, stream bed sediments (Walnut and Woman Creeks), and in lake sediments (Standley Lake, Great Western Reservoir and Mower Reservoir).

How Do We Know What Is There?

Starting in the 1970s as public interest over the extent of off-site contamination and potential threats to public health and the environment rose, the federal government, health regulators and

independent scientists began exploring the extent of off-site contamination and potential health impacts.

The Colorado Department of Public Health and Environment (CDPHE) monitored the air to identify any potential airborne contamination coming from the site. CDPHE also collected soil and water samples from areas surrounding Rocky Flats. Local governments, who were likewise concerned about the extent of off-site contamination, began collecting water and soil samples. Independent citizen groups and university research scientists also played a role in determining the extent of off-site contamination. The Department of Energy (DOE) also embarked on an effort to better understand the extent of contamination on off-site lands, as did the Environmental Protection Agency (EPA).

Extent of Off-Site Radioactive Contamination and Associated Risk

In order to assess the risk to human health and the environment it is vital to know how much contamination there is. Throughout the Denver-metro area, the background level for plutonium in soils is approximately 0.06 picoCuries per gram of soil (pCi/g), a measure of radioactivity. Background is above 0.0 pCi/g as a result of radioactive fall-out from atmospheric testing of nuclear weapons; background, however, does not include a contribution from Rocky Flats contamination.

Most of the soil samples taken by CDPHE and others were either at background or slightly higher. However, a few samples were greater. The highest concentration, which was found 1,800 feet east of Indiana Street near the site's east entrance, was 6.5 pCi/g. This level of radioactivity corresponds to approximately 0.12 millirem/year, another measure of radioactive dose.

To help understand what this level means, it is helpful to compare it to other doses of radiation we experience:

- Average dose from all sources = 360 mrem/year
- Terrestrial background (Rocky Mountains) = 40 mrem/year
- Cosmic radiation (Denver) = 50 mrem/year
- Drinking water = 5 mrem/year
- Chest X-ray = 8 mrem
- Dental X-ray = 10 mrem
- Coast-to-coast airplane (roundtrip) = 5 mrem
- Eating one banana per day per year = 5 mrem/year (source is potassium)

Based on this data, in 1997 DOE, CDPHE and EPA determined that there was no need to perform environmental remediation of any off-site lands. Their findings and conclusions were subsequently submitted to the Agency for Toxic Substances and Disease Registry (ATSDR), a division within the Federal Centers for Disease Control. ASTDR evaluated whether the risk posed to residents was adequately calculated. They also evaluated whether DOE, EPA and CDPHE's determination to not remediate off-site lands was supportable. ASTDR affirmed DOE's data and conclusions – no additional cleanup activities were needed to protect public health and the environment.

Independent Analyses and an Enormous Lawsuit
From the mid-1990s onwards, Rocky Flats was the subject of many independent reviews. Some of those reviews included assessments of contamination on off-site lands and potential impacts to surrounding communities.

Health Advisory Panel – Potential Impacts to Neighboring Communities
In 1990 Governor Roy Romer directed CDPHE to conduct an in-depth study on historical public exposures from off-site contamination. Gov. Romer also appointed an independent panel, the Health Advisory Panel (HAP), to oversee CDPHE's work.

In order to determine the extent of contamination, CDPHE took extensive soil, water and air samples. CDPHE also reviewed historical information. With this data, the researchers determined that the two most prevalent types of off-site contamination are radioactive (primarily plutonium and americium) and carbon tetrachloride. CDPHE and the HAP then undertook a risk assessment to determine the effects (potential of increased cancer risk due to exposures) these two forms of contamination would have on public health. The researchers concluded, in short, the risk of developing cancer due to off-site contamination was extremely low and did not pose a significant threat to human health or the environment. The risk ranges associated with off-site exposure to plutonium and carbon tetrachloride were very similar to the risks discussed above.

For more information about this study please go to: http://www.cdphe.state.co.us/rf/index.htm

Community Independent Review
This aforementioned risk posed to residents living on lands adjacent to Rocky Flats also tracks an independent, community led study undertaken in the late 1990s. This study, led by Dr. John Till with the Risk Assessment Corporation, established a cleanup range that would be protective of a family with children living at Rocky Flats. Under Dr. Till's scenario, which was developed in partnership with a community oversight board, the family would live in the most contaminated part of the site and get all of its food and water from within Rocky Flats.

As a result of this work, a few years later, DOE, EPA and CDPHE adopted cleanup levels that fell within Dr. Till's cleanup range. Importantly, though, most of Rocky Flats, including all of the lands that comprise the Rocky Flats National Wildlife Refuge, are significantly cleaner than the range established by Dr. Till.

Cook vs. Rockwell—Neighbors Sue
In the early 1990's, property owners within a certain radius of Rocky Flats filed a class action lawsuit against the first two site contractors, Dow Chemical (site operator from 1952 to 1975) and Rockwell International (site operator from 1975 to 1990). The lawsuit alleged that the contractors released off-site contamination that resulted in a diminution of property values. In 2006, the jury awarded the plaintiffs $553.9 million based on trespass and nuisance resulting from contamination spreading to off-site lands.

Importantly, Cook vs. Rockwell concerned off-site contamination and did not speak to the cleanup. The reason is that the class of property owners closed in the early 1990s so they were

compensated for their loss in property value up to the early 1990s. The case also did not address the health risks associated with off-site contamination.

Dow and Rockwell appealed, and the 10th Circuit Court of Appeals threw out the judgment. The US Supreme Court denied a petition to reinstate the judgment.

DATABASE DESCRIPTIONS

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

DocumentSearchResult.xls

Hi Jennifer: I pulled a spreadsheet from SEMS identifying the files associated with the Adolph Coors Inc. site (attached). It appears that the work done there in the 80s was emergency removal work, so I'm cc'ing Laura Williams on this email as she is the Emergency Response Section Chief. The site has been archived (boxed in a warehouse), so if need be, we will have to wait to retrieve any files due to social distancing/teleworking because of the Coronavirus. The title of a document from 1981 reveals that "final strategy determination is that after investigation of this site no hazardous waste was revealed." However, it does appear that a remedial response action was taken in 1985. Please let me know if you would like us to pursue retrieving these documents once we return to the office.

Regards,
David

Subject: Sleeping Indian Phase 1

I am performing a Phase I environment site assessment (ESA) and came across this Coors site as a SEMS-Archive. When I searched the region 8 website using the COD number two items came up but the links took quite some time to download and one of them was a database with over 5,000 sites with no apparent way to search other than scrolling through and the other link did not have much information. I have included the information I have about the site below and was hoping you could send me any relevant documents to evaluate if this is a recognized environmental condition or a historical recognized environment condition for my report. Thanks, Jenn

WEI

WASTE ENGINEERING, INC.

Exhibit D

Contractor's Response to CSB, Advertisement for Bid, Bid Proposal, Bid Schedule, Bid Bond

BID BOND

We, the undersigned Garney Companies, Inc. as Principal, and The Continental Insurance Company as Surety, are hereby held and firmly bound unto the City of Arvada, Colorado, in the penal sum of Five Percent (5%) of the Total Amount Bid for the payment of which, well and truly to be made, we hereby jointly and severally bind ourselves, successors and assigns.

THE CONDITION of this obligation is such that whereas the Principal has submitted to the City of Arvada, Colorado the accompanying Bid Proposal, and hereby made a part hereof to enter into a Contract Agreement for the construction of City of Arvada Project No. 18-WA-10, Sleeping Indian Water Tank.

WHEREAS, the City, as a condition for receiving said Bid Proposal, requires the Principal to deposit with the City a Bid Proposal Guaranty, equivalent to not less than 5 Percent of the amount of said Bid Proposal.

NOW THEREFORE,

(A) If said Bid Proposal shall be rejected; or in the alternate,

(B) If said Bid Proposal shall be accepted and the Principal shall execute and deliver a Contract Agreement (properly completed in accordance with said Bid Proposal) and shall furnish a Performance and Payment Bond upon the forms prescribed by the City for the faithful performance of said Contract; and for the payment of all persons performing labor or furnishing materials in connection therewith; and shall in all other respects perform the agreement created by the acceptance of said Bid Proposal;

Then this obligation shall be void, otherwise the same shall remain in force and effect; it being expressly understood and agreed that the liability of the Surety for any and all claims hereunder shall, in no event, exceed the penal amount of this obligation as herein stated.

The Surety, for value received, hereby stipulates and agrees that the obligations of said Surety and its bond shall be in no way impaired or affected by any extension of the time within which the City may accept such Bid and said Surety does hereby waive notice of any such extension.

IN WITNESS WHEREOF, the Principal and the Surety have hereunto set their hands and seals, this 19th day of April, 2021 ~~2020~~, and such of them as are corporations have caused their corporate seals to be hereto affixed and these presents to be signed by their proper officers, the day and year first set forth above.

POWER OF ATTORNEY APPOINTING INDIVIDUAL ATTORNEY-IN-FACT

Know All Men By These Presents, That The Continental Insurance Company, a Pennsylvania insurance company, is a duly organized and existing insurance company having its principal office in the City of Chicago, and State of Illinois, and that it does by virtue of the signature and seal herein affixed hereby make, constitute and appoint

M Moody, K Zerounian, Susan Hecker, Janet C Rojo, Betty L Tolentino, Kevin Re, Brian F Cooper, Robert P Wrixon, Virginia L Black, Maureen O'Connell, Susan M Exline, Julia Ortega, Gillian Bhaskaran, Brittany Kavan, Thuyduong Le, Individually

of San Francisco, CA, its true and lawful Attorney(s)-in-Fact with full power and authority hereby conferred to sign, seal and execute for and on its behalf bonds, undertakings and other obligatory instruments of similar nature

- In Unlimited Amounts -

and to bind them thereby as fully and to the same extent as if such instruments were signed by a duly authorized officer of the insurance company and all the acts of said Attorney, pursuant to the authority hereby given is hereby ratified and confirmed.

This Power of Attorney is made and executed pursuant to and by authority of the By-Law and Resolutions, printed on the reverse hereof, duly adopted, as indicated, by the Board of Directors of the insurance company.

In Witness Whereof, The Continental Insurance Company has caused these presents to be signed by its Vice President and its corporate seal to be hereto affixed on this 3rd day of August, 2020.

The Continental Insurance Company

Paul T. Bruflat — Vice President

State of South Dakota, County of Minnehaha, ss:

On this 3rd day of August, 2020, before me personally came Paul T. Bruflat to me known, who, being by me duly sworn, did depose and say: that he resides in the City of Sioux Falls, State of South Dakota; that he is a Vice President of The Continental Insurance Company, a Pennsylvania insurance company, described in and which executed the above instrument; that he knows the seal of said insurance company; that the seal affixed to the said instrument is such corporate seal; that it was so affixed pursuant to authority given by the Board of Directors of said insurance company and that he signed his name thereto pursuant to like authority, and acknowledges same to be the act and deed of said insurance company.

Authorizing By-Laws and Resolutions

ADOPTED BY THE BOARD OF DIRECTORS OF THE CONTINENTAL INSURANCE COMPANY:

This Power of Attorney is made and executed pursuant to and by authority of the following By-Law duly adopted by the Board of Directors of the Company at a meeting held on May 10, 1995.

> "RESOLVED: That any Group Vice President may authorize an officer to sign specific documents, agreements and instruments on behalf of the Company provided that the name of such authorized officer and a description of the documents, agreements or instruments that such officer may sign will be provided in writing by the Group Vice President to the Secretary of the Company prior to such execution becoming effective.

This Power of Attorney is signed by Paul T. Bruflat, Vice President, who has been authorized pursuant to the above resolution to execution power of attorneys on behalf of The Continental Insurance Company.

This Power of Attorney is signed and sealed by facsimile under and by the authority of the following Resolution adopted by the Board of Directors of the Company by unanimous written consent dated the 25th day of April, 2012.

> "Whereas, the bylaws of the Company or specific resolution of the Board of Directors has authorized various officers (the "Authorized Officers") to execute various policies, bonds, undertakings and other obligatory instruments of like nature; and
>
> Whereas, from time to time, the signature of the Authorized Officers, in addition to being provided in original, hard copy format, may be provided via facsimile or otherwise in an electronic format (collectively, "Electronic Signatures"), Now therefore be it resolved: that the Electronic Signature of any Authorized Officer shall be valid and binding on the Company."

Contractor's Responsibilities:

Arvada City Code Sec. 18-72. Responsibilities. All licensees shall be responsible for any work requiring a permit under the provisions of this chapter, without limitation to the items as herein listed to:
(a) Provide generally recognized safety measures and equipment to protect laborers and the public in general;
(b) Present the required city license card when required by the building official or the building official's authorized representative;
(c) Inform the building inspection division promptly of any change III licensee's address or telephone number;
(d) Obtain a permit when the same is required;
(e) Provide correct and honest factual information on all applications for permits;
(f) Pay all fees assessed under authority of this chapter and other city regulations and to accurately inform the customer of the exact permit fee and other costs associated with obtaining a permit;
(g) Construct without substantial departure from or disregard of drawings and specifications when such drawings and specifications have been filed and approved by the building inspection division and permit issued for same unless changes are approved by the building inspection division;
(h) Perform the activity authorized by a permit in a proficient, workmanlike manner consistent with acceptable building practices;
(i) Complete all work authorized by the permit issued under the authority of this chapter unless good cause is proved;
G) Notify the building official when work is ready for inspection, and provide access to and means for the inspection, or if access to the work has been denied by the property owner, to comply with the requirements of section 18-33(c);
(k) Obtain all required inspections and special inspections when the same are required by this chapter;
(1) Take all reasonable actions to assist the building inspection division in ensuring that all inspections, including a final inspection, are completed before the expiration of the building permit. This includes, but is not limited to, ensuring that work subject to inspection is not concealed by subsequent work, assisting in making timely arrangements for inspections so that approvals may be completed before a permit expires, and engaging in timely and continuing communications with the division concerning the inspection process until a final inspection is completed and the permit is closed;
(m) Obtain a final inspection and approval, a certificate of completion, a temporary certificate of occupancy, or a certificate of occupancy, when required, upon completion of the work authorized by the licensee's permit;
(n) Keep streets and sidewalks that are adjacent to construction sites and open to the public traffic free of obstructions, construction materials, equipment, debris, mud, dirt or any other material that may be a hindrance or hazard to vehicular or pedestrian traffic;
(0) Observe and conform to all of the rules and regulations governing construction and land use in the city; and
(p) Comply with all orders, conditions, and restrictions issued by written order of the building official or the Board.

OFFICE OF THE SECRETARY OF STATE
OF THE STATE OF COLORADO

CERTIFICATE OF FACT OF GOOD STANDING

I, Jena Griswold, as the Secretary of State of the State of Colorado, hereby certify that, according to the records of this office,

GENERAL NOTES:

1. All construction shall be in accordance with the City of Arvada "Engineering Code of Standards and Specifications for the Design and Construction of Public Improvements", latest edition, unless otherwise specified herein.
2. All contractors and subcontractors shall be licensed with the City of Arvada Engineering Division.
3. All work will require a City of Arvada Engineering Division Public Improvement Permit prior to the start of construction. All contractors and subcontractors must obtain a separate permit for the work being completed by the particular contractor or subcontractor. Any construction within the Colorado Department of Transportation (CDOT) right-of-way will require a CDOT construction permit prior to any work in their right-of-way.
4. All contractors and subcontractors shall have a set of approved drawings signed by the City Engineer or designee and a printed copy of the current City of Arvada "Engineering Code of Standards and Specifications for the Design and Construction of Public Improvements" on site at all times.
5. The City of Arvada Engineering Division shall be notified (Phone # 720-898-7640) a minimum of 24 hours prior to the start of any construction.
6. The Engineer assumes no responsibility for buried utilities. The Contractor is responsible to verify the location of all utilities prior to construction and to protect them during construction.
7. The Contractor is responsible for all project safety including, but not limited to, trench excavation and shoring, traffic control and security.
8. Benchmark location, elevation and datum are as noted.
9. As-built drawings showing all changes from the approved construction drawings shall be submitted to the City Engineer or designee prior to initiation of the required two year warranty period. Utility as-builts shall include stationing of all fittings, services and pertinent elevations. Certificates of Occupancy for any buildings or structures within the development will not be issued until the as-builts have been received, reviewed and approved by the City of Arvada Engineering Division.
10. A City of Arvada Tax Certification form must be completed by all contractors and subcontractors performing work on this project. This form details all materials which have been included in the work by contractors and subcontractors. Copies of all paid invoices for materials shall be attached to the form. Certificates of Occupancy for any buildings or structures within the development will not be issued until this form has been received, reviewed and approved by the City of Arvada Engineering Division.
11. Owner/developer shall obtain a Stormwater Construction Permit from the Colorado Department of Public Health and Environment, Water Quality Control Division, prior to clearing, grading, or excavating a site of one (1) acre or more or less than one acre and part of a larger development. A copy of the approved permit must be submitted to the City of Arvada Engineering Division prior to the start of clearing, grading or excavating of the site. A copy of the approved permit must also be available on the project site at all times during construction.
12. Contractor shall obtain a Colorado State Construction Dewatering Discharge Permit from the Colorado Department of Public Health and Environment for all areas where dewatering is required from an excavation and water is discharged into a storm sewer, channel, irrigation ditch or any waters of the United States. A copy of the approved permit must be submitted to the City of Arvada Engineering Division prior to the start of any dewatering. A copy of the approved permit must also be available on the project site at all times during construction.
13. All curb ramps shall comply with the latest City of Arvada and ADA standard. Contractor to check with the City of Arvada Engineering Division to verify the latest curb ramp standard prior to construction of any ramp.
14. All materials and workmanship shall be subject to inspection by the City of Arvada Engineering Division. The City reserves the right to accept or reject any such materials and workmanship that does not conform to its "Engineering Code of Standards and Specifications for the Design and Construction of Public Improvements".
15. A plan for traffic control during construction shall be submitted to the City of Arvada Engineering Division for acceptance with the Public Improvements Permit application. A public improvements construction permit will not be issued without an approved traffic control plan for traffic control on existing roads during construction.

UTILITIES

1. Contractor shall notify all affected parties, City of Arvada Utility and Engineering Divisions, a minimum of 24 hours prior to any water or sewer service interruption.
2. Contractor is to coordinate the operation of all water valves, fire hydrants, and other appurtenances with the City's Water Operations Division through the City's Engineering Inspector.
3. All fire hydrant branch pipe shall be Class 200 AWWA C900 PVC or Class 150 AWWA C909 PVC. All fire lines to buildings with interior sprinkler systems shall be Class 200 AWWA C900 PVC pipe or Class 200 AWWA C909 PVC pipe only.
4. All metallic fittings shall be wrapped with minimum 8 mil thickness polyethylene encasement.
5. All PVC water mains shall be installed with white #12 Type UF or USE cable single copper conductor as a tracer wire spirally wrapped around the pipe. Tracer wire to extend from main to a cathodic protection box located on the right side of all fire hydrants. Tracer wire shall be connected to existing tracer wire where possible. Where no tracer wire exists, ends of tracer wire shall be stripped and grounded into native soil a minimum of 12" deep.
6. All meter pits shall be 24 inch diameter concrete or plastic in accordance with Section 30 of the City of Arvada "Engineering Code of Standards and Specifications for the Design and Construction of Public Improvements".
7. Storm, Sanitary and Water manhole covers shall say "City of Arvada Storm, Water or Sanitary" where applicable in accordance with the City's standard lid detail.
8. Blow-offs, both permanent and temporary, shall be in accordance with City of Arvada Standard Detail Drawing W-9.
9. All sanitary sewer mains installed shall be high pressure jet cleaned after completion of the final lift of asphalt placement and prior to required television inspection by the City's Wastewater Division.

ENGINEER NOTES:

1. The Contractor shall contact the Utility Notification Center of Colorado (UNCC) at 1-800-922-1977, at least 2 working days prior to beginning excavation or grading to have all registered utility locations marked. Other unregistered utility entities are to be located by contacting the respective representative. Utility service laterals are also to be located prior to beginning excavation or grading.
2. The Contractor shall be responsible for protecting all utilities during construction and for coordinating with the appropriate utility company for any utility crossings required. Repair of damaged utilities shall be at the Contractor's expense, including unknown underground utilities.
3. During construction and upon completion of construction, the site shall be cleaned and restored to a condition equal to, or better than, that which existed before construction, or to the grades and condition as required by these plans.
4. The Contractor shall conform to all safety precautions during construction as set forth by both OSHA Publication 2226 for excavation and trenching operations, and including all state and federal regulations set forth in CFR (Code of Federal Regulations) 29, all parts.
5. The Contractor shall keep a copy of the approved set of plans and the project manual on-site at all times.
6. Existing fences, tree, sidewalks, curbs, and gutters, landscaping, structures, and improvements destroyed, damaged, or removed due to construction of this project shall be replaced or restored in like kind at the Contractor's expense, unless otherwise indicated on these plans.
7. A Colorado Department of Public Health and Environment dewatering wastewater discharge permit is required if dewatering is required to install utilities and water is discharged into a storm sewer, channel, irrigation ditch or any waters of the United States.
8. All disturbed soils, on-or off-site and related to work at this project site, is required to be protected from wind, and storm water erosion.
9. The Contractor is responsible for field locating and verifying elevations of all existing sewer mains, watermains, curbs, gutters and other utilities at the points of connection shown on the plans, ant at any utility crossings prior to installing any of the new improvements. If a conflict exists and/or a design modification is required, the Contractor shall coordinate with the Engineer to modify the design.
10. The type, size, location and number of all known underground utilities are approximate when shown on the drawings. It shall be the responsibility of the Contractor to verify the existence and location of all underground utilities along the route of the work before commencing new construction.Any disruption of the utility service that is required to adjust, extend, relocate or otherwise modify any utility within the project area shall be coordinated in advance with the affected utility entity and customers shall be notified 48 hours prior to the start of disruption.
11. the Contractor shall be responsible for insuring that no mud or debris shall be tracked onto the existing public street system. Mud and debris must be removed immediately by an appropriate method (ie, machine broom sweep, light duty front-end loader, handwork, etc.) and approved by the inspector. The frequency and effort of the street cleaning operations shall be directly related to the amount of construction traffic and weather conditions. The Contractor shall be immediately address any street cleaning problems identified by the City.
12. After acceptance by the City, Public Improvements depicted in these plans shall be guaranteed to be free from material and workmanship defects for a period of two years from the date of acceptance.
13. The Contractor shall submit a traffic control plan prepared by a licensed Civil, Engineer, A.T.S.S.A. (American Traffic Safety Services Association) or C.C.A.(Colorado Contractors Association) certified traffic technician for review and approval by the Engineer, CDOT, County and the City prior to commencement of any work within the public R.O.W. The plan shall accommodate two way traffic at all times. TCS(Traffic Control Supervision) shall be on site at all times when flag personnel are in use. Unsafe traffic conditions at the City's and County;s discretion shall warrant work stoppage.
14. The Contractor shall be solely responsible for maintaining reasonable access to and from all of the adjacent properties throughout the course of the work. The Contractor shall be required to meet (individually or collectively) with all adjacent property owners who's driveway access will be effected by the work. As construction conditions change and the work progresses the Contractor shall be required to periodically update those landowners so that they are kept informed about their access.
15. When an existing asphalt street must be cut, the street must be restored to a condition equal to or better than it's original condition. The existing street condition shall be documented by he Engineer before any cuts are made. Patching shall be done in conformance with the current street repair requirements of he City. All patches shall blend smoothly into the existing surface.
16. Prior to permanent installation of traffic striping and symbols, the Contractor shall place temporary tabs and markings depicting alignment and placement of the same. Tabs and markings shall be approved b the City prior to permanent installation of striping and symbols.
17. All lane striping shall be epoxy paint, minimum 15 mils thick when dry, and have a glass bead to paint ratio of 25 Lbs/Gallon. Epoxy paint shall be applied at a minimum rate of 1 Gallon/100 Sq. Ft.,
18. Prior to placement of H.B.P., or concrete within the street and after moisture /density tests have been taken on the subgrade material(when a full depth section is proposed) or on the subgrade and base material (when a composite section is proposed), a mechanical "Proof Roll" will be required. The entire subgrade and/or base material shall be rolled with a heavily loaded vehicle having a total GVW of not less than 50,000 Lbs. and a single axle weight of at least 18,000 Lbs. with pneumatic tires inflated to not less than 90 P.S.I.G. "Proof Roll" vehicles shall not travel at speeds greater than 3 M.P.H. any portion of the subgrade or base material which exhibits any pumping or deformation, as determined the Engineer shall be reworked, replaced or otherwise modified to form a smooth non-yielding surface. The Engineer shall be notified at least 24 hours prior to the "Proof Roll". All "Proof Rolls" shell be performed in the presence on an Inspector. All decisions made b the Inspector shall be final with regards to mitigation of deficient subgrade or base material(s). "Proof Rolls" are acceptable for 24 hours unless hindered by moisture at the Inspector's discretion.
19. All fills in street Right-of-Ways shall be compacted per City, County and/or CDOT Specifications. All earthwork in street Right-of-Ways shall comply with City, County and/or CDOT Specifications.
20. The construction area shall be watered and maintained at all times during construction activities so as to prevent wind-caused erosion and dust. All land disturbing activities shall be immediately discontinued when fugitive dust impacts adjacent properties, as determined by the City.
21. All recommendations of the Stormwater Management Plan shall be followed and implemented.After each storm the Contractor shall inspect and repair as may be required to all silt fences, and straw bale dikes.

EROSION CONTROL

1. The City of Arvada stormwater inspector must be met on site and provided with a stormwater management plan after installation of temporary best management practices (BMPs), but before construction or grading begins.
2. There shall be no earth-disturbing activity outside the limits designated in the accepted plans.
3. All required perimeter silt and construction fencing shall be installed prior to any land disturbing activity (stockpiling, stripping, grading, etc). All other required erosion control measures shall be installed at the appropriate time in the construction sequence as indicated in the approved project schedule, construction plans, and stormwater management plan.
4. At all times during construction, the Developer shall be responsible for preventing and controlling on-site erosion including keeping the property sufficiently watered so as to minimize windblown sediment. The Developer shall also be responsible for installing and maintaining all erosion control facilities shown herein.
5. Pre-disturbance vegetation shall be protected and retained wherever possible. Removal or disturbance of existing vegetation shall be limited to the area(s) required for immediate construction operations, and for the shortest practical period of time.
6. All soils exposed during land disturbing activity (stripping, grading, utility installations, stockpiling, filling, etc.) shall be kept in a roughened condition by ripping or disking along land contours until mulch, vegetation, or other permanent erosion control BMPs are installed. No disturbed areas, except those within the project street rights-of-way, shall remain exposed for more than thirty (30) days before temporary or permanent erosion control (e.g. seed/mulch, landscaping, etc.) is installed, unless otherwise approved by the City of Arvada stormwater inspector.
7. In order to minimize erosion potential, all temporary (structural) erosion control measures shall:
   a. Be inspected at a minimum of once every fourteen (14) days and after each significant storm event and repaired or reconstructed as necessary in order to ensure the continued performance of their intended function.
   b. Remain in place until such time as all the surrounding disturbed areas are sufficiently stabilized. The City of Arvada stormwater inspector must be notified prior to removal.
   c. Be removed when they are no longer functional or after the site has been sufficiently stabilized as determined by the stormwater inspector. The City of Arvada stormwater inspector must be notified prior to removal.
8. When temporary erosion control measures are removed, the Developer shall be responsible for the clean up and removal of all sediment and debris from all drainage infrastructure and other public facilities.
9. The contractor shall immediately clean up any construction materials inadvertently deposited on existing streets, sidewalks, or other public rights of way, and make sure streets and walkways are cleaned at the end of each working day.
10. J. All soil stockpiles shall not be placed within one hundred (100) feet of a drainageway, where possible, and shall be protected from sediment transport by appropriate erosion control methods. Any soil stockpile that will be dormant for over thirty (30) days shall be seeded.
11. The stormwater volume capacity of detention ponds will be restored and storm sewer lines will be cleaned upon completion of the project and before turning the maintenance over to the property owner or Homeowners Association (HOA).
12. City Ordinance requirements make it unlawful to discharge or allow the discharge of any pollutant or contaminated water from construction sites. Pollutants include, but are not limited to discarded building materials, concrete truck washout, chemicals, oil and gas products, litter, and sanitary waste. The developer shall at all times take whatever measures are necessary to assure the proper containment and disposal of pollutants on the site in accordance with any and all applicable local, state, and federal regulations.
13. A designated area shall be provided on site for concrete truck chute washout. The area shall be constructed so as to contain washout material and located at least fifty (50) feet away from any waterway during construction. Upon completion of construction activities the concrete washout material will be removed and properly disposed of prior to the area being restored.
14. Masonry activities will be contained with appropriate lot-specific BMPs, such as stockpile perimeter control and bermed washout pits. All waste products from masonry activities will be removed and disposed of properly.
15. To ensure that sediment does not move off of individual lots sediment/erosion control BMPs shall be installed and maintained at one or more of the following locations until the lots are landscaped.
   a. Below all gutter downspouts.
   b. Out of drainage swales.
   c. Along lot perimeter.
   d. Other locations,k if needed.
16. A vehicle tracking pad shall be installed wherever it is necessary for construction equipment including but not limited to personal vehicles exiting existing unpaved areas onto roadways. No earthen materials, i.e., stone, dirt, etc., shall be placed in the curb & gutter or roadway as a ramp to access temporary stockpiles, construction materials and/or building sites.
17. Conditions in the field may warrant erosion control measures in addition to what is shown on these plans. The Developer shall implement whatever measures are determined necessary, as directed by the City of Arvada.

APPROVED:

City Engineer _____ Date _____ 18-WA-10 Job Number

Review is for general compliance with the City of Arvada "Engineering Code of Standards and Specifications for the Design and Construction of Public Improvements", latest edition. Sole responsibility for completeness and/or accuracy of these Documents shall remain with the Registered Professional Engineer sealing these plans. The City does not accept liability for facilities designed by others.

SITE PIPING PLAN

0' 10' 20'

GENERAL PIPE NOTES:

1. The Contractor and pipe fabricator are responsible for the AWWA C200 welded-steel pipe, and AWWA C900 and C905 PVC pipe design. The responsibility includes the design of pipe joints, such as butt-strap, and bell and spigot joints. Bolted-steel coupling joints are not permitted under the water storage tank(WST). Steel pipe joints other than welded joints shall be bonded. All pipe joints shall be restrained pipe joints throughout the project. The steel pipe shall have a thickness ≥ 0.25-inches. Excepting the inlet and overflow risers inside the WST the AWWA C200 welded-steel pipe shall have a cement mortar lining and AWWA C114 tape coating. Tape coating shall not be used on pipelines inside the WST, but the exposed steel pipe shall be painted. See drawings for coatings at slab penetrations and inlet and overflow risers.

   The pipe design shall consider construction loads, such as ready-mixed concrete trucks, concrete pumpers, excavation and backfill earthwork equipment, that will occur between pipeline placement and completion of the WST. The pipe fabricator and Contractor are jointly responsible for the pipeline wall thickness design that considers interim construction and final condition loads.

2. 1/4-inch thick wall pipe with a 3/8-inch cement-mortar lining was used for the calculations of elevations.
3. Exterior surface of all pipe below bottom of slab to be Commercial Blast Cleaned per SSPC-SP-6, primed and wrapped with 20 mil innerwrap and 2 wraps of 30 mil outerwrap per AWWA C 214.
4. Backfill entire trench width of pipeline under the tank floor slab using CLSM to 5'-0" beyond the tank wall footing and as required to meet pipe design wall thickness and deflection requirements The CLSM shall extend from 6" minimum below the pipe invert to 6" above top of pipe.
5. The Contractor shall provide means, such as temporary bulkheads, to permit pressure testing of the under-slab pipelines prior to slab concrete placement.
6. All steel pipe in yard and to include steel pipe in Flow Meter Valve House shall be bonded.
7. All PVC pipe 12" and smaller shall be AWWA C900.
8. All PVC pipe 14" and larger shall be AWWA C905.
9. All Steel and PVC pipe joints shall be restrained.
10. Test pressure for all pipe will be 150 PSI.
11. Restrain across Bolted Sleeve Couplings. Provide rod lugs or restraint rings on pipe. See Sheet P12.

GENERAL NOTES

1. The overflow is designed for a maximum flow of 3000 gpm.
2. Prior to fabricating the Overflow/Inlet riser support frame, the Contractor shall measure the distance from the wall to the centerline of the Overflow or Inlet pipe and make any required adjustments in the frame dimensions. Allow for the effects of post-tensioning of the wall.
3. Anodes should be placed at 180° from each other.
4. See Specifications, Section 33 11 01.01

COATING NOTES

1. Surface preparation for risers and riser support brackets:
   - SSPC-SP10/NACE No. 2 Near White Blast Cleaning
   - Anchor profile of 1.5 mils
2. Coatings:
   - Prime Coat: Tnemec Series 91-H_2O -Hydro Zinc (2.5-3.5 mils)
   - 1st Coat: Tnemec Series 20-PotaPox (4-6 mils)
   - 2nd Coat: Tnemec Series 20-PotaPox (4-6 mils)

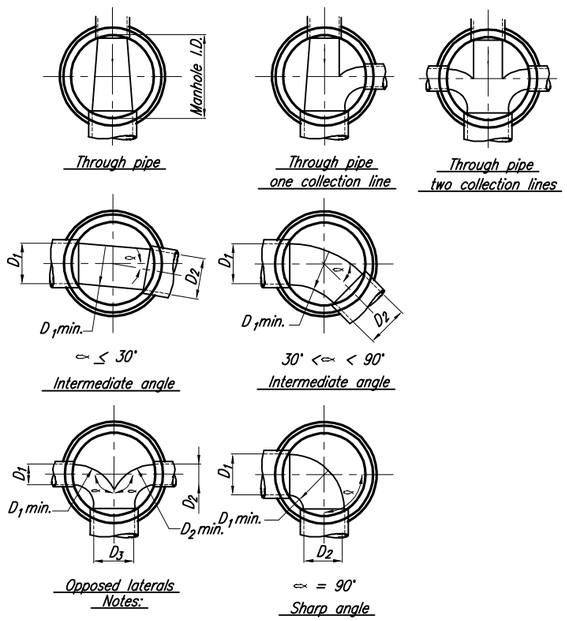
Set each ring in full bed of bituminous mastic (RAM-NEK) or plastic sealing compound.

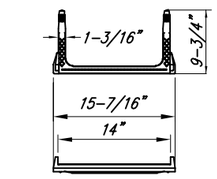


In ground water areas, grout all outside joints with mortar.

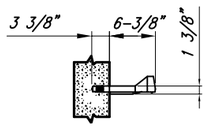
NOTES:

1. Manhole barrel minimum diameter shall conform to table below.
2. Shaping for smooth manhole inverts must be done by forming or shaping base concrete.
3. Precast concrete sections shall conform to ASTM C478.
4. Block-outs when approved shall extend a max. of 6" past manhole O.D. and be satisfactorily plugged and sealed.
5. Concrete manholes may be poured in place only with prior approval.
6. All mortar grout shall be mixed with Type II cement.
7. Bench must have a brushed, non-skid surface.
8. Outfall or drop manholes shall be lined with Sikagard No. 62 or approved equal, coated with 20 mil. min. applied in 4-7 mil. layers, per manufacturer's specifications.
9. Manhole lids to be labeled "WATER" with confined space note.
10. Locking lids required.

Pipe I.D.	Manhole I.D.	Ring & cover
Smaller than 18"	4'-0"	24"
18" To 24"	5'-0"	30"
Larger than 24"	6'-0"	30",36" w/ 24" Inner-cover
60" & Larger	Special design	



MANHOLE ELEVATION AND GENERAL NOTES



1. Details shown are typical only for installations with a maximum of up to 18" inch difference in inverts (inside drop)

90° BEND

BENDS

NOTES:

1 lengths of pipe measure each way from valves and bends.

2 Clamps, rods and Megalugs not allowed for 24" and larger pipes.

3 D=diameter, L=length, G=grade M.S.=mild steel, H.S.=high strength

4 Minimum 4.5' ground cover required.

5 Based on 150 psi internal pressure, for L.

6 M.S. means mild steel rod ASTM standard designation A 36.

7 H.S. means high strength rod ASTM standard designation A 193 Grade B-7.

8 Nuts shall be ASTM standard designation A 307 Grade A or B hexagon heavy series.

9 See tie rod detail drawing. Also, tie rod coupling details, clamp details, and set clamp details.

10 Length refers to the amount of pipe which must be tied together and is not necessarily the length of the rods.

11 Length of tied pipe chart is also for the length of joint restraint for megalugs.

NOTES

1. Dimensions shown are in inches.
2. Fillet weld shall meet the minimum requirements of the American Institute of Steel Construction Specifications except as follows: Fillet welds shall be 1/4–inch minimum except when welding to 3/16–inch steel pipe shell where they shall be 3/16–inch.
3. Stud bolts conforming to ASTM A193, Grade B7 or equal, nuts conforming to ASTM A194, Grade 2H, lug material conforming to ASTM A283, Grade C or ASTM A36 or equal. Stud bolts 5/8–inch diameter through 7/8–inch diameter have UNC threads. Stud bolts 1–inch diameter and larger to have 8 UN threads per inch.
4. Insulate tie rods when used with dissimilar pipe materials.
5. The Middle ring length of the flexible coupling shall be specified.
6. The Contractor shall determine the length "J" (coupling bolt length) from manufacturer's catalog using the specified middle ring length.
7. The Contractor shall determine the length "L" (extension of bolt beyond plate) and shall be sufficient length to accommodate nut and washer.
8. "G" = manufacturer's recommended optimum pipe end gap between ends of pipe.
9. "C" = J+A+1 inch, "D" = 2J + 2 inches, (round these values up to the next even inch). Minimum, (for "A" dimensions, see lug schedule.)
10. Tie rod length = 2L + 2C + G (single coupling)
    = 2L + 2C + 2G + D (double coupling)
11. Mid span restraint for DI pipe. EBBA Iron Series 1100SDB or approved alternate
12. 48" for pipe 48" dia. and smaller, 72" for pipe larger than 48" dia.. Where necessary for installation, shorter distances will be as approved by the Engineer during shop drawing review.
13. Bonding is required only on dissimilar metal junctions.

SCHEDULE OF JOINT HARNESS TIE BOLTS
STUDS AND LUGS FOR RUBBER GASKETED JOINTS

APPROVED:

FLOOR SLAB POST–TENSIONING PLAN

0' 8' 16'

LEGEND

- XXX — Tendon Number
- Dead End Anchorage
- Stressing End Anchorage

FLOOR SLAB DESIGN DATA AND NOTES

The floor slab is 5–inches thick

DESIGN DATA

Min P/A = 200 psi

CONCRETE:

F'c = 4,500 psi
F'ci = 2,000 psi for 50% stress
= 3,200 psi for 100% stress

The slab shall be half–stressed when the concrete reaches a compressive strength, f'ci, of 2,000 psi and 100% stressed when the concrete reaches 3,200 psi.

PRESTRESSING STEEL:

Aps = 0.217 sq. in.
= 0.6 inch dia. strand

Fse = 149.77 ksi
= 0.56 Fsu

Fjack = 0.80 Fsu
= 216.0 ksi

Pe = 32.50 kips

Tendons are shown in an idealized manner that does not show curvature due to anchorage congestion/conflicts and curvature of the slab edge. The radius of any curvature required to place tendons shall be ≥ 25 feet. See the Specifications and details for other tendon and anchorage requirements.

The tendons in the footing / floor transition shall be placed at the center of gravity of the section along the actual tendon alignment.

The floor slab post–tensioning tendon design is based on a curvature coefficient, μ, equal to 0.14 per radian, a wobble coefficient, k, equal to 0.0020 / foot, anchor set of 3/8 inch, and long term losses including elastic shortening (ES), shrinkage (SH), creep (CR) and steel relaxation (RE) of 15,000 psi. A relative humidity of 60%, Young's Modulus, E, = 28,000,000 psi, stressing from one end and low relaxation strands were utilized in the long–term and friction loss calculations. A soil friction factor of 0.81 was used.

Tendons ≤ 100–feet long can be stressed from one end. Alternate stressing ends of single pull tendons. Tendons > 100–feet long shall be stress from both ends.

The average theoretical elongation after seating loss was calculated to be approximately 0.067 inches per foot of tendon.

ANCHORAGE:

VSL Swiss S–6

TENDON SHEATH:

VSL CP–Plus 60 mil HDPE encapsulated system

TENDON AND REINFORCING STEEL SUPPORT:

Tendons and reinforcing steel in the slab shall be supported by chairs or bolsters spaced at a maximum of 4–feet 0–inches on center. Wall footing reinforcing steel shall be supported by bolsters or chairs spaced at a maximum of 2–feet on center. Use SS tipped chairs and bolsters in contact with inside form surfaces. See Specifications.

WALL ELEVATION–LOOKING FROM OUTSIDE

WALL GENERAL NOTES

1. Symons S–panel ties with water seal and 1–inch break–back cones on both tie ends (or equal) shall be used on wall forms.
2. Tendon and reinforcing steel support chairs shall be spaced a maximum of 4–feet on center.
3. The Contractor may start wall construction at any segment. Each subsequent segment concrete placement shall be adjacent to a previously placed segment, i.e., proceeding in a clockwise or counterclockwise manner (or both). "Checkerboard" style placements are unacceptable.
4. The wall design is based on Duro 30 natural rubber bearing pad, spring constant, K, = 12.54 k/ft per bearing pad with a shear modulus, G, = 43.54 lb/in^2.

The following external load sets were used to develop the wall vertical moment design envelope:

Water: γ = 62.4 PCF
- Water depth = 0.25 x 16'–8" (4'–2")
- Water depth = 0.50 x 16'–8" (8'–4")
- Water depth = 0.75 x 16'–8" (12'–6)
- Water depth = 1.00 x 16'–8" (16'–8")

Soil: γ = 55.0 PCF
- Soil depth = 0.25 x max. soil depth (4'–0") plus 2'–0" LL surcharge
- Soil depth = 0.50 x max. soil depth (8'–0") plus 2'–0" LL surcharge
- Soil depth = 0.75 x max. soil depth (12'–0") plus 2'–0" LL surcharge
- Soil depth = 1.00 x max. soil depth (16'–0") plus 2'–0" LL surcharge

The following external load sets were used to develop circumferential forces:

Water depth = 16'–8"
Soil depth = 16'–0" plus 2'–0" LL surcharge

Long–term losses including elastic shortening (ES), shrinkage (SH), creep (CR) and relaxation (RE) were developed using an average relative humidity of 60% and Young's Modulus, E, for the prestressing steel = 28,500 ksi, and for the concrete = 4067 ksi.

DESIGN DATA

CONCRETE
f_{ci} = 4500 PSI
f'_{ci} = 3500 PSI

REINFORCEMENT
f_y = 60,000 PSI
ASTM A 615 GRADE 60

DUCT
2.99" ID PT–PLUS plastic duct with grout vents attached.

POST TENSIONING STEEL
0.6" diameter strands
FPU = 270,000 PSI
ASTM A416, low relaxation

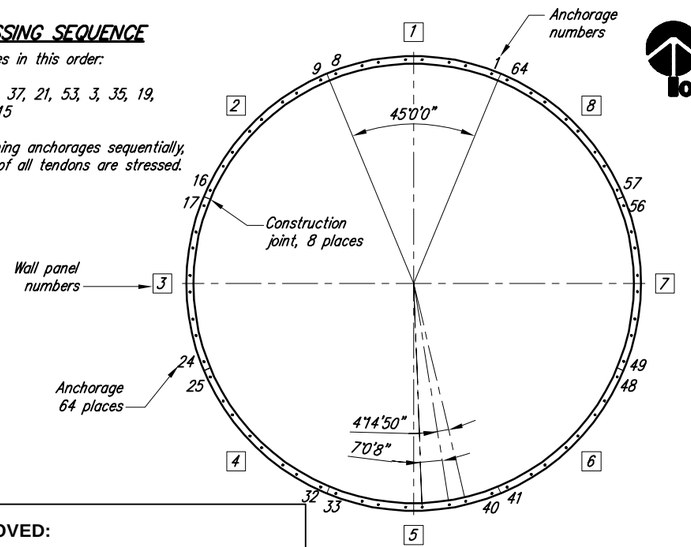
ANCHORAGES
VSL ECI 6–7 or equal.

TENDONS

Aps = 1.302 sq. in. (6–0.6" dia. strands)
Fse = 137.67 ksi
= 0.51 Fsu
Fjack = 0.80 Fsu
= 216 ksi
Pe = 179.25 kips

The tendon design is based on a curvature coefficient, μ, equal to 0.19 per radian, a wobble coefficient, k, equal to 0.0004 per foot, anchor set of 1/2 inch, angle of curvature of 279.0°, and long term losses including elastic shortening (ES), shrinkage (SH), creep (CR), and relaxation (RE) of 17,000 psi. Strands shall be elongated from each end.
Calculated tendon elongations, before anchor set are:
- First Pull = 7.37 inches
- Second Pull = 1.91 inches
- Total = 9.28 inches
- Total = 7.81 inches (5.90 + 1.91) inches (after seating and removal of slack of 20% stress on first pull)

For Fjack = 0.80 Fpu, the calculated maximum stress at the anchorage = 0.51 Fpu after anchor set. The maximum stress along the tendon = 0.64 Fpu. The average initial stress after release = 154.67 or 0.57 Fpu.



The minimum residual compression in the wall is 384 psi at the top of the wall with the water elevation at the high water level. The maximum compressive stress on the gross untransformed wall section is 704 psi at 0–feet above the bottom of the wall.

WALL STRESSING SEQUENCE

Stress anchorages in this order:

1, 33, 17, 49, 5, 37, 21, 53, 3, 35, 19, 51, 31, 63, 47, 15

Stress all remaining anchorages sequentially, until both ends of all tendons are stressed.

WALL LAYOUT PLAN
Not to scale

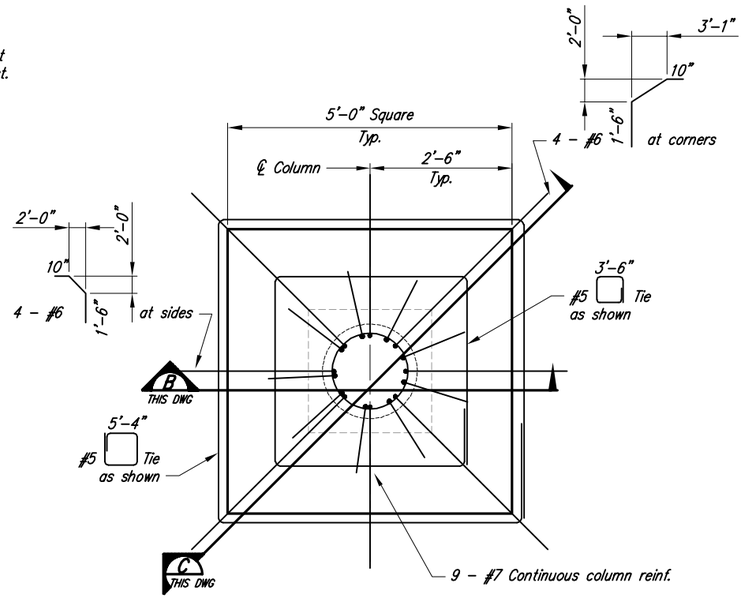
COLUMN ELEVATION

0' 1' 2' 3' 4'

COLUMN NOTES:



1. The Contractor is required to demonstrate column plumbness to the Engineer prior to concrete placement. Columns shall be braced at mid-height and at the top of the column form.
2. Column spirals shall be fabricated with three "spacers" with a section modulus greater than 0.008 in in order to maintain the proper pitch and spacing. Column spials are full height, No splices permitted.
3. Use Aztec "Heavy duty space wheel" plastic reinforcement spacers (Model PLW150/4 HD) or Preco barspan side (Model DO 12/40) for vertical column reinforcement, 3 at 120°, maximum 4-foot centers.Use 4 spacers @ 90° if columns are square.
4. The Contractor shall present the column heights to the Engineer a minimum of 2 weeks prior to column forming and concrete placement.
5. Footings designed for a maximum soil bearing of 5,000 PSF.
6. The column construction joint may project a maximum of 1/4 inch into the slab. If the joint exceeds this amount of projection, the excess concrete shall be carefully removed to within 1/4 inch of the correct elevation.
7. The Contractor may submit a conical column capital alternate for review.
8. Column forms shall be full height. No horizontal joints in forms will be permitted.
9. The Contractor shall place shoring at the column to permit the Engineer to safely review the reinf steel prior to concrete placement. Alternatively, the Contractor may provide equip such as a scissors lift properly equipped to permit Engineer to review steel and concrete placement.
10. The column footing depth can be varied (Minimum footing depth 1'-6") and the column height made uniform.
11. Banded tendons shall be placed above uniformly spaced tendons at column centerline. Post-tensioning supplier shall determine he number of uniformly spaced tendons to be "weaved" under banded tendons to provide correct drape.

ROOF SLAB POST-TENSIONING PLAN

ROOF SLAB POST-TENSIONING NOTES

1. Tendon support shown is the minimum required for acceptable tendon support. Additional support reinforcing steel bars may be required during placement to properly support the tendons and to maintain tendon profile.
2. The success of the design of the post-tensioned flat plate roof is directly related to the accuracy of placement of the tendon profile. Care shall be taken to maintain profile during concrete placement.
3. The tendon supplier shall provide tendon profiles for "non-typical" profile tendons.
4. No more than two tendons shall be bundled.

LEGEND

- Stressing End
- Non-Stressing End
- (101) Tendon Number
- (D) Column line
- 1 Strand 0.6" Dia. tendon
- 2 Strand 0.6" Dia. tendon bundle

TENDON SUPPORT

(1) Uniform Tendons Support by reinforcing steel slab bolsters or #5 and chairs spaced at 3'-0" maximum on center.

(2) Banded Tendon Support
#5 x 10'-0" Long @ 4'-0" on center.
Chairs supporting #5 reinforcing steel shall be spaced 2'-0" maximum on center.

Bars other than the above shall be #5 supported at 4'-0" maximum on center.

CRSI Class 1 heavy duty chairs and bolsters shall be used to support reinforcing steel and tendons.

PLOT DATE: 4/4/2021 6:57 PM SAVE DATE: 4/4/2021 6:50 PM

ROOF SLAB DESIGN DATA AND NOTES:

7.5–inch Thick Roof Slab Design Criteria

Loads

DL Concrete (DL) = 150 PCF
Snow Load (GSL) = 45 PSF – settled snow depth = 2–feet (Colorado Design Snow Loads 2016)
Live load = 45 PSF

Load Cases

Case 1 = DL + GSL
Case 2 = DL + LL

Load Factors for strength design

LL Load factor = 1.6 for strength design
DL load factor = 1.2 for strength design

Allowable concrete tensile stress

No, 0 psi, concrete tensile stress permitted for initial and ultimate load conditions for Load Case 1 or 2 to promote crack free performance

Concrete

F'c = 4,500 PSI
F'ci = 2,250 PSI for half–stress based the average of field cylinders strength tests and use of VSL Swiss S–6 anchorage.
F'ci = 3,500 PSI for full–stress based on average of field cylinders strength tests and use of VSL Swiss S–6 anchorage.

Prestressing Steel

ASTM A 416 low relaxation strand
E = 28,000,000 psi
Fpu = 270,000 PSI
Aps = 0.217 SQ IN for 0.6–inch diameter strand
Fjack = 0.8 Fpu maximum = 216 KSI
Pe = 35.0 kips

Tendon Long–term and seating losses

3/8 inch anchorage seating loss
K= 0.0020 / foot
μ = 0.14 per radian
ES+SH+CR+RE = 19,200 psi (relative humidity of 60%
Stress the first roof slab tendon and adjust the stressing force if the measured elongation is greater or less than the calculated elongation. A 5% tolerance is acceptable.

Wedges seating differential $\leq$ 1/8 inch max.
Anchorage wedge cavity clean, and free of oil or grease
Min. radius of curvature = 25–feet
Clearance $\geq$ 1 1/2 inches
Anchorages spacing $\geq$ 6–inches on center but may be placed vertically provided that the proper edge distance is maintained
No more than two tendons may be bundled
Tendons 100–FT or longer shall be stressed from both ends
Tendons less than 100–feet long can be stressed from one end and adjacent tendons shall be stressed from opposite ends.
Tendons in the banded direction shall be given alignment priority during anchorage placement

ANCHORAGE:

0.6" VSL Swiss S–6 strand anchorage

TENDON DUCT:

60 mil HDPE encapsulated system

Tendon and reinforcing steel support

1. CRSI Support Walls and roof slabs: Use Class 2 and 2B supports, types SB, BB, JC, HC, BC, and CHC. A tip of stainless steel meeting ASTM A 493, AISI Type 430 shall be welded to the bottom of each leg. For Class 2A supports, no portion of the non–stainless steel wire shall be closer than 1/4 inch from the form surface

2. Securely staple supports to formwork. Use SS staples.

ROOF SLAB TENDON DRAPE AT CENTERLINE COLUMNS

Span Point	CL Wall (End Spans) CL Column (Interior Spans)	0.125	0.250	0.375	0.500	0.6250	0.750	0.875	CL Column
Lines A, D, 1, 4									
End Spans (28.55')	3.75	2.99	2.29	1.91	1.98	2.42	3.30	4.59	5.62
Interior Span (32.00')	5.62	4.43	3.01	2.19	1.88	2.19	3.01	4.43	5.62
Lines B, C, 2, 3									
End Spans (15.52')	3.75	3.70	3.61	3.64	3.81	4.22	4.54	5.23	5.62
Interior Span (32.00')	5.62	4.43	3.01	2.19	1.88	2.19	3.01	4.43	5.62

NOTES:

1. Drape is the distance in inches from the bottom of the slab to the cg of the strand.

2. Strand ordinates in inches from bottom of roof slab to the cg of strand(s). Over columns where the vertical alignment of banded and uniform strands conflict the vertical alignment shown shall be given to the banded strands. The uniform strand shall be placed below the banded strands over the columns where strands coincide.

DETAIL 4 THIS DWG

WALL FOOTING FORMWORK DETAIL

DETAIL 2 THIS DWG

NOTES:

1. The CONTRACTOR shall construct a template to assure proper placement and slope of footing.
2. Sill plate. Contractor may taper sill plate up to 1/2" to facilitate removal. Remove sill plates from under wall immediately after wall form removal.
3. Smooth trowel finish from under wall to outside face of footing.
4. Bearing pads. See Detai 4 THIS DWG.
5. The joint shall be lightly sand or water blasted to remove debris and loose concrete. Use Concresive Liquid (LPL) or Concresive Standard Liquid to bond the fresh concrete to the hardened wall footing concrete.
6. In the event that shrinkage cracks develop in wall "ring beam" footing or curb, the cracks shall be covered with duct tape to prevent the entry of debris, dirt, etc. into the crack. The Contractor shall repair cracks wider than 0.010 inches. See Specification Section 03 68 00 CONCRETE CRACK REPAIR.
7. PVC – Waterstop. See Detail 3 THIS DWG.
8. Deneef chemical grout waterstop not shown for clarity. See Detail 3 S14.

GEOTECHNICAL INVESTIGATION AND DESIGN
AVAILABLE TO BIDDERS

PART 1 GENERAL

1.1 GEOTECHNICAL INVESTIGATION AND DESIGN

A. To obtain relative data concerning the character or material in and upon which the project might be built, CTL Thompson, performed a Geotechnical Investigation Project No. DN49,641-125-R1, dated October 9, 2018. The information and data contained in the report was used to design the proposed 1.5-MG water storage tank structure. The report is for the use of Bates Engineering, Inc. for its design purposes, and is neither a statement nor a warranty of soil conditions.

The report is also made available and referred to for the contractors use to construct the CTL designed and specified earthwork contained in the report, such as the under-slab over excavation, soil re-placement and conditioning, wall backfill, membrane, and perforated drain system and connection to MH-1 including an automatic drainage gate on the underdrain discharge.

B. Neither the ENGINEER nor the OWNER assumes any responsibility for the geotechnical and underdrain design.

PART 2 PRODUCTS – NOT USED

PART 3 EXECUTION – NOT USED

END OF SECTION

SECTION 01 11 13
SUMMARY OF WORK

PART 1 GENERAL

1.1 PROJECT DESCRIPTION SUMMARY

A. The project, The City of Arvada 1.5-MG Sleeping Indian Water Storage Tank (PROJECT), includes all work necessary to complete the PROJECT, related appurtenances and activities including, earthwork, pipelines, and site grading.

B. The intent of the project is to have an operational PROJECT constructed by a single, prime, contractor in general conformance with these Contract Documents.

PART 2 DOCUMENTS

2.1 DRAWINGS

A. Drawings for this project are titled: **City of Arvada 1.5-MG Sleeping Indian Water Storage Tank, Project 18 – WA – 10.**

B. Drawings shall not be scaled.

C. The Drawings are intended to clearly and consistently describe the work to be performed. Any discrepancies shall be brought to the attention of the ENGINEER immediately.

2.2 SPECIFICATIONS

A. The Specifications for this project are titled, City of Arvada 1.5-MG Sleeping Indian Water Storage Tank.

B. This document by reference includes the City of ***Arvada Engineering Code of Standards and Specifications*** and included specifications ***of Bates Engineering formatted as Construction Specifications Institute (CSI) documents***. Each CSI Technical Specification is divided into three parts: General, Products and Execution. The Bates Engineering CSI technical specifications primarily relate to the water storage tank structure. It is up to the contractor to coordinate and integrate the work requirements between these two standards.

PART 3 EXECUTION

3.1 WORK UNDER OTHER CONTRACTS - NONE

3.2 WORK TO BE PERFORMED BY OWNER - NONE

3.3 PERMITS

A. The CONTRACTOR is responsible for applying for and obtaining any and all permits.

3.4 CONTRACTOR USE OF PREMISES

A. The Drawings describe restrictions on the use of the construction site. The CONTRACTOR shall not stockpile any materials within 25-feet of the existing water pump station or within 10-feet of either side of existing water pipelines.

B. The CONTRACTOR is responsible for informing any and all suppliers and subcontractors of the restrictions regarding the use of the premises.

END OF SECTION

SECTION 01 32 29
CONSTRUCTION REVIEW

PART 1 GENERAL

1.1 WORK INCLUDED

A. The OWNER, or the representative retained by the OWNER, will review work in progress. This review is separate from quality control work performed by the CONTRACTOR. This may include work such as reviews of pipelines, pipeline bedding, reinforcing steel and concrete placements and concrete finishing.

B. Construction review shall consist of visual observation of materials, equipment or construction work to determine t4hat the work is in substantial conformance with the Contract Documents and with the design intent. Such review shall not be construed to relieve the CONTRACTOR in any way from his obligations and responsibilities under the construction contract. Specifically, but without limitation, review by the OWNER does not relieve the CONTRACTOR of the responsibility for the means and methods of construction, nor for the safety on the job site.

PART 2 NOT USED

PART 3 EXECUTION

3.1 GENERAL

A. Cooperate with the OWNER and his representatives to permit reviews prior to covering the work with backfill or with forms. If requested make available equipment such as scissor lifts and ladders to permit the OWNER's representative to access the work.

B. The following paragraphs describe examples of activities requiring construction review.

3.2 FORMWORK

A. Prior to placing concrete the CONTRACTOR shall be required to demonstrate to the OWNER's representative that the forms are stable, and will remain stable during concrete placement, plumb and will remain plumb, and have correct curvature and alignment. The CONTRACTOR shall also show the OWNER's representative that the forms are properly spaced to obtain the required member thickness. The CONTRACTOR shall also document that the form

surfaces are neither too hot to cause surface crazing or too cold as to cause freezing, by taking form surface temperatures.

3.3 REINFORCING STEEL PLACEMENT

A. A minimum of six hours prior to concrete placement a final review of reinforcing steel placement for footings, slabs, columns and walls of structures, such as vaults or water storage tanks, will be performed by the OWNER's representative. This "final" review shall be scheduled 24 hours prior to form or concrete placement. If the CONTRACTOR is delayed and is not ready for the review and has not contacted the OWNER's representative to re-schedule the review, the CONTRACTOR will be responsible for all costs associated with the aborted review.

B. The CONTRACTOR shall be responsible for performing a quality control review prior to the OWNER's representative final review to determine the acceptability, completeness and clean-up of any sub-contractors work and overall readiness of the work for the final review. The CONTRACTOR shall provide written documentation to the OWNER's representative that he has performed the review and that the work is in fact ready for concrete placement

C. If the CONTRACTOR has proceeded to place forms prior to the final review, the CONTRACTOR will be required to remove sufficient forms to permit the visual review of the reinforcing steel and appurtenances such as reinforcing steel supports and chairs, ties, penetrations, waterstops and bearing pads.

3.4 REPAIR OF CONCRETE SURFACE DEFECTS

A. The CONTRACTOR shall permit the OWNER's representative to review any surface defects, such as "bug holes" and rock pockets, prior to making any repairs to the work.

B. All materials and procedures for making any repairs shall be reviewed and accepted by the OWNER's representative prior to performing the work.

3.5 STRESSING AND GROUTING OF POST-TENSIONING STEEL

A. The OWNER's representative shall be notified 24 hours prior to stressing and grouting of post-tensioning steel and shall be present to review stressing and grouting operations unless otherwise determined by the OWNER's representative.

3.6 CONSTRUCTION JOINTS

A. The OWNER's representative shall review the preparation of all construction joints prior to concrete or grout placements.

B. Notify and provide a minimum of 24 hours notice to the OWNER's representative of these activities.

C. If joint placement is performed without the OWNER's representative presence, the work will be deemed unacceptable and non-conforming to these specifications.

D. If the OWNER's representative determines that construction review of a particular activity is unnecessary, he will provide written direction to the CONTRACTOR to proceed with that particular activity without his construction review.

E. In the event that the CONTRACTOR fails to notify the ENGINEER and work is covered without the ENGINEER's review the work will either be rejected or subjected to reduced payment, at the OWNER's option. The reduced payment will be a sliding scale: After the first occurrence 90% payment: after the second occurrence 75% payment and after the third, and subsequent occurrences 50%. Payments will be made based on the schedule of values provided by the CONTRACTOR.

3.7 PIPELINE PRESSURE TESTING

A. It is the responsibility of the CONTRACTOR to notify and provide a minimum of 24 hours notice to the OWNER's representative prior to pressure testing pipelines.

B. See SECTION 33 14 00 – PIPELINE HYDROSTATIC TESTING.

.

END OF SECTION

SECTION 01 32 29
CONSTRUCTION REVIEW

PART 1 GENERAL

1.1 WORK INCLUDED

A. The OWNER, or the representative retained by the OWNER, will review work in progress. This review is separate from quality control work performed by the CONTRACTOR. This may include work such as reviews of pipelines, pipeline bedding, reinforcing steel and concrete placements and concrete finishing.

B. Construction review shall consist of visual observation of materials, equipment or construction work to determine t4hat the work is in substantial conformance with the Contract Documents and with the design intent. Such review shall not be construed to relieve the CONTRACTOR in any way from his obligations and responsibilities under the construction contract. Specifically, but without limitation, review by the OWNER does not relieve the CONTRACTOR of the responsibility for the means and methods of construction, nor for the safety on the job site.

PART 2 NOT USED

PART 3 EXECUTION

3.1 GENERAL

A. Cooperate with the OWNER and his representatives to permit reviews prior to covering the work with backfill or with forms. If requested make available equipment such as scissor lifts and ladders to permit the OWNER's representative to access the work.

B. The following paragraphs describe examples of activities requiring construction review.

3.2 FORMWORK

A. Prior to placing concrete the CONTRACTOR shall be required to demonstrate to the OWNER's representative that the forms are stable, and will remain stable during concrete placement, plumb and will remain plumb, and have correct curvature and alignment. The CONTRACTOR shall also show the OWNER's representative that the forms are properly spaced to obtain the required member thickness. The CONTRACTOR shall also document that the form

surfaces are neither too hot to cause surface crazing or too cold as to cause freezing, by taking form surface temperatures.

3.3 REINFORCING STEEL PLACEMENT

A. A minimum of six hours prior to concrete placement a final review of reinforcing steel placement for footings, slabs, columns and walls of structures, such as vaults or water storage tanks, will be performed by the OWNER's representative. This "final" review shall be scheduled 24 hours prior to form or concrete placement. If the CONTRACTOR is delayed and is not ready for the review and has not contacted the OWNER's representative to re-schedule the review, the CONTRACTOR will be responsible for all costs associated with the aborted review.

B. The CONTRACTOR shall be responsible for performing a quality control review prior to the OWNER's representative final review to determine the acceptability, completeness and clean-up of any sub-contractors work and overall readiness of the work for the final review. The CONTRACTOR shall provide written documentation to the OWNER's representative that he has performed the review and that the work is in fact ready for concrete placement

C. If the CONTRACTOR has proceeded to place forms prior to the final review, the CONTRACTOR will be required to remove sufficient forms to permit the visual review of the reinforcing steel and appurtenances such as reinforcing steel supports and chairs, ties, penetrations, waterstops and bearing pads.

3.4 REPAIR OF CONCRETE SURFACE DEFECTS

A. The CONTRACTOR shall permit the OWNER's representative to review any surface defects, such as "bug holes" and rock pockets, prior to making any repairs to the work.

B. All materials and procedures for making any repairs shall be reviewed and accepted by the OWNER's representative prior to performing the work.

3.5 STRESSING AND GROUTING OF POST-TENSIONING STEEL

A. The OWNER's representative shall be notified 24 hours prior to stressing and grouting of post-tensioning steel and shall be present to review stressing and grouting operations unless otherwise determined by the OWNER's representative.

3.6 CONSTRUCTION JOINTS

A. The OWNER's representative shall review the preparation of all construction joints prior to concrete or grout placements.

B. Notify and provide a minimum of 24 hours notice to the OWNER's representative of these activities.

C. If joint placement is performed without the OWNER's representative presence, the work will be deemed unacceptable and non-conforming to these specifications.

D. If the OWNER's representative determines that construction review of a particular activity is unnecessary, he will provide written direction to the CONTRACTOR to proceed with that particular activity without his construction review.

E. In the event that the CONTRACTOR fails to notify the ENGINEER and work is covered without the ENGINEER's review the work will either be rejected or subjected to reduced payment, at the OWNER's option. The reduced payment will be a sliding scale: After the first occurrence 90% payment: after the second occurrence 75% payment and after the third, and subsequent occurrences 50%. Payments will be made based on the schedule of values provided by the CONTRACTOR.

3.7 PIPELINE PRESSURE TESTING

A. It is the responsibility of the CONTRACTOR to notify and provide a minimum of 24 hours notice to the OWNER's representative prior to pressure testing pipelines.

B. See SECTION 33 14 00 – PIPELINE HYDROSTATIC TESTING.

.

END OF SECTION

SECTION 01 33 01
SUBMITTALS

PART 1 GENERAL

1.1 GENERAL

A. CONTRACTOR shall furnish, process, deliver, reproduce and perform other necessary functions incidental to scheduling and handling of shop drawings, project data and samples, operation and maintenance manuals, equipment record sheets, manufacturer's certificate of proper installation, and record drawings, as indicated on Drawings or as specified, and in accordance with provisions of the Contract Documents.

Submittals shall be provided in a digital, electronic format.

B. See appropriate Specification and Contract Documents sections for specific items for which data and/or samples are required.

C. Review or acceptance of substitutions, schedules, shop Drawings, lists of materials, and procedures submitted or requested by the CONTRACTOR shall not add to the Contract price, and all additional costs which may result therefrom shall be solely the obligation of the CONTRACTOR. It shall not be the responsibility of the OWNER to provide engineering or other services to protect the CONTRACTOR from additional costs accruing from such review or acceptance.

D. No equipment or material for which listings, Drawings, or descriptive material is required shall be installed until the ENGINEER has on hand copies of such accepted lists and the appropriately approved and stamped final shop drawings. Materials, equipment and products incorporated into the work without the prior submittal review and acceptance by the ENGINEER will be cause for rejection and replacement of the work at no cost to the OWNER.

E. The review of submittals by the ENGINEER will be limited to general design requirements only, and shall in no way relieve the CONTRACTOR from responsibility for errors or omissions contained therein.

F. Review Time Period

1. The ENGINEER agrees to review and act upon and return the first submission of a transmittal within 14 days after receipt.
2. The ENGINEER agrees to review, act upon and return second and subsequent submissions of a transmittal within 14 days after receipt.

3. The ENGINEER agrees to review, act upon CONTRACTOR requested expedited submissions within two days after receipt. The cost for each expedited submittal will be backcharged to the CONTRACTOR.

G. No adjustment of Contract Time or Price will be permitted due to delays in progress of Work caused by rejection and subsequent resubmission of submittals, including multi-resubmittals.

H. The ENGINEER will determine if a submittal is complete and contains sufficient information for review and reject and return incomplete submittals. Partial reviews of submittals shall not be performed. See Paragraph 1.5 in this specification.

1.2 ADDRESS

A. Unless otherwise directed, the CONTRACTOR shall email submittals to the ENGINEER.

1.3 IDENTIFICATION OF SUBMITTALS

A. Using a form subject to a submittal review, sign, date and transmit the submittal to the ENGINEER.

B. Numbering System

1. Number the initial submittal using a chronological number system starting with, 001. The CONTRACTOR may identify the submittal using the specification number followed by a sequence number, such as 10220-01, in addition to numbering the submittal.
2. Number the re-submittal by using an alphabetic suffix, i.e., 001a.

C. Indicate the date by which the submittal is to be returned. A specific date is required. Terms such as ASAP are unacceptable.

D. Indicate the specification section, regardless of submittal identification system, and drawing number.

E. Use a separate transmittal for each submittal item even if items are from the same technical specification, i.e., different size PVC waterstops. Transmittals for multi-submittals of items will be rejected.

F. Indicate where the product is to be used, i.e., particular structure element.

G. If proposed equipment or materials deviate from the Specifications or Drawings in any way, the deviations shall be clearly noted and justification for said deviations shall be explained in detail in a separate letter immediately following transmittal sheet. If explanation is not given, Shop Drawings will be returned without action.

1.4 SUBMITTALS – GENERAL

A. The CONTRACTOR agrees that submittals processed by the ENGINEER do not become Contract Documents and are not Change Orders; that the purpose of the Shop Drawing review is to establish a reporting procedure and is intended for the CONTRACTOR's convenience in organizing his work and to permit the ENGINEER to monitor the CONTRACTOR's progress and understanding of the design.

B. CONTRACTOR shall be responsible to make submittals.

C. Shop Drawings submitted to the ENGINEER by other than the CONTRACTOR will be returned to the CONTRACTOR without action of any kind. Shop Drawings will not be received from, or returned to, subcontractors.

D. Submit items sufficiently in advance of date required to allow reasonable time for review, and to allow for resubmission if necessary. Items not submitted in accord with the provisions of Contract Documents will be returned, without action, for resubmission. Delays caused by above shall be CONTRACTOR's responsibility.

E. The CONTRACTOR shall submit **six** copies of each Shop Drawing. Shop Drawings shall be drawn on 24-inch x 36-inch sheets or, where practical, reduced to 8 ½ x 11 or 11 x 17 inches. Three copies will to be returned to the CONTRACTOR. If the CONTRACTOR desires more than two copies, he may submit additional copies, which will be returned to him.

F. CONTRACTOR shall stamp his approval on Shop Drawings prior to submission to ENGINEER as indication of his checking and verification of dimensions and coordination with interrelated items. Marks on Drawings by CONTRACTOR shall not be in red. Any marks by CONTRACTOR shall be duplicated on all copies submitted. CONTRACTOR marks on reproducible transparencies shall be outlined with a rectangular box.

G. Submit standard items such as equipment brochures, cuts of fixtures, product data sheets or standard catalog sheets or pages. Indicate exact item or model and all proposed options. Include material specifications, construction details, motor data, legible scale details, sizes, dimensions, weights, performance

characteristics and pump curves, capacities, test data, anchoring details, location of connections to other work, installation instructions, storage and handling instructions, color charts and paint system, layout Drawings, parts catalogs, rough-in diagrams, wiring diagrams, controls, supporting calculations for equipment and associated supports specified to be designed by equipment manufacturers or suppliers, special handling instructions, and other pertinent data.

H. Should the CONTRACTOR propose any item on his Shop Drawings, or incorporate an item into the work, and that item should subsequently prove to be defective or otherwise unsatisfactory, (regardless of the ENGINEER's preliminary review), the CONTRACTOR shall, at his own expense, replace the item with another item that will perform satisfactorily.

1.5 INCOMPLETE SUBMITTALS

A. ENGINEER will return entire submittals that are incomplete for the CONTRACTOR’s correction and resubmittal.

B. Submittals will be determined incomplete due to factors such as:

1. Submittals that have no clear indication of the CONTRACTOR’s review and approval.
2. Submittals that are unsigned.
3. Clearly lack sufficient information to enable the ENGINEER’s review.
4. Submittals that contain more than one item.
5. Submittals that lack a sequential number system.
6. Submittals that lack a CONTRACTOR’s certification that the product, material etc. conforms to, or is an exception to, the specifications.
7. Submittals that lack an indication where the product is to be used, in which specification section and drawing where the product is found.

1.5 SUBMITTALS - OPERATION AND MAINTENANCE MANUALS AND EQUIPMENT RECORD SHEETS

A. Operation and Maintenance Manuals and Equipment Record Sheets shall be submitted as follows:

1. Operation and Maintenance Manual information and Equipment Record Sheets specific to one piece of equipment or material shall be submitted to the ENGINEER for acceptance.
2. After Operation and Maintenance Manual and Equipment Record Sheets submittals for each piece of equipment or material have been accepted,

the accepted submittals shall be assembled into bound final Operation and Maintenance Manuals and re-submitted.

B. Provide, within 30 days after the date Shop Drawings are accepted, submittals of the Operation and Maintenance Manual information and Equipment Record Sheet.

C. Submittals will be handled the same as Shop Drawings. See paragraph 1.3.

D. The transmittal form for the Operation and Maintenance Manual and Equipment Record Sheets shall have original Shop Drawing submittal number of the accepted item plus a suffix "O-M".

E. Equipment Record Sheets. - not required for this project

F. Submittal of Operation and Maintenance Manuals and Equipment Records Sheets shall be applicable to but not necessarily limited to:

1. Pumps
2. Instrumentation and Controls
3. Heating and Ventilating Equipment and Controls
4. Electrical System
5. Valves and Operators
6. Flowmeters
7. Access Hatches

G. Operation and Maintenance Manual submittals. For each individual piece of equipment, submit operation and maintenance manuals that include, but are not necessarily limited to, the following detailed information, as applicable:

1. Equipment function, normal operating characteristics, limiting conditions.
2. Assembly, disassembly, installation, alignment, adjustment and checking instructions.
3. Operating instructions for startup, routine and normal operation, regulation and control, shutdown, and emergency conditions.
4. Lubrication and maintenance instructions.
5. Guide to "troubleshooting".
6. Parts list, predicted life of parts subject to wear, and replacement parts ordering instructions with current price information, as applicable.
7. List of special tools.
8. Outline, cross-section, and assembly Drawings; engineering data; and electrical diagrams, including elementary diagrams, wiring diagrams, connection diagrams and interconnection diagrams where applicable.
9. Test data and performance curves, where applicable.

10. Safety considerations.

H. Where an Operation and Maintenance Manual submittal has been prepared by the manufacturer to cover more than one model of a particular piece of equipment all references to models other than the one specifically installed shall be deleted or crossed out.

I. Submit final Operation and Maintenance Manuals printed on 8-1/2 x 11 inch size heavy first quality paper with standard 3-hole punching and bound in stiff metal hinged binder constructed as a 3-post style suitable for bookshelf storage or as otherwise accepted. Provide outside of binders with titles. Tab each section of manuals for easy reference to each piece of equipment or material with plastic-coated dividers. Provide index for each manual.

J. Reduce Drawings or diagrams bound in manuals to an 8-1/2 x 11 inch or 11 x 17 inch size. However, where reduction is not practical to insure readability, fold larger Drawings separately and place in vinyl envelopes which are bound into the binder. Identify vinyl envelopes with Drawing numbers.

K. Include in Operation and Maintenance Manual copies of installation instructions, original parts lists, or other documents packed with equipment when delivered.

L. Where the Drawings and specifications identify a piece of equipment by an instrument tag number or equipment number, that same number shall also be used to identify the equipment in the Operation and Maintenance Manual.

M. Submit eight completed copies of final Operations and Maintenance Manual with Equipment Record Sheets as described previously.

1.6 SUBMITTALS - SAMPLES

A. Where required, submit two samples each to address indicated above. Identify samples as to: manufacturer, item, use, type, project designation, tag number, specification section or Drawing detail reference, color, range, texture, finish and other pertinent data.

B. Forward with transmittal letters. Include brochures and installation instructions. CONTRACTOR to stamp his approval on sample transmittals as indication of his checking and verification of dimensions and coordination with interrelated items. Resubmit samples of rejected items.

C. Acceptable samples submitted or constructed, constitute criteria for judging completed work. Finish work or items not equal to samples will be rejected.

D. Samples may be retained for comparison purposes and the CONTRACTOR shall remove samples when directed. The CONTRACTOR shall include in bid all costs of furnishing and removing samples.

1.7 SUBMITTALS - RECORD DRAWINGS

A. The ENGINEER will prepare a set of Record Drawings for the project that will include the changes made in materials, equipment, location and dimensions of the work. Bi-weekly, or as otherwise agreed, the CONTRACTOR shall submit to the ENGINEER a current listing and description of each change incorporated into the work since the preceding submittal.

1.8 SUBMITTALS - MANUFACTURER'S CERTIFICATE OF PROPER INSTALLATION

A. Where required in the Specifications or Drawings, the CONTRACTOR shall submit manufacturer's certification of proper installation of equipment prior to startup or performance testing.

B. Such certificate shall state that the equipment or system has been installed in accordance with the manufacturer's recommendation and has been inspected by a manufacturer's authorized representative, that it has been serviced with the proper initial lubricants, that applicable safety equipment has been properly installed, and that the proper electrical and mechanical connections have been made.

1.9 SUBMITTALS - CERTIFICATES OF COMPLIANCE WITH SPECIFIED STANDARDS AND CODES

A. A Certificate of Compliance shall be furnished for materials specified to a recognized standard or code prior to the use of any such materials in the work. The ENGINEER may permit the use of certain materials or assemblies prior to sampling and testing if accompanied by a Certificate of Compliance. The certificate shall be signed by the manufacturer of the material or the manufacturer of assembled materials and shall state that the materials involved comply in all respects with the requirements of the Specifications. A Certificate of Compliance shall be furnished with each lot of material delivered to the work and the lot so certified shall be clearly identified in the certificate.

B. All materials used on the basis of a Certificate of Compliance may be sampled and tested at any time. The fact that material is used on the basis of a Certificate of Compliance shall not relieve the CONTRACTOR of responsibility for incorporating material in the work which conforms to the requirements of the Contract Documents and any such material not conforming to such requirements will be subject to rejection whether in place or not.

C. The ENGINEER reserves the right to refuse permission for use of material on the basis of a Certificate of Compliance.

D. The form of the Certificate of Compliance and its disposition shall be as directed by the ENGINEER.

1.9 SUBMITTALS - ACCEPTANCE OR REJECTION

A. Transmittals will be reviewed for overall design intent and returned to CONTRACTOR with action to be indicated by the ENGINEER. It shall be the CONTRACTOR's responsibility to assure that previously accepted documents are destroyed when they are superseded by a resubmittal as such.

B. It shall be the CONTRACTOR's responsibility to insure that required items are corrected and resubmitted.

C. If the items or system proposed are acceptable however the major part of the individual Drawings or documents are incomplete or require revision, the submittal will be returned with requirements for completion.

1.10 SUBMITTAL DISPOSITON

A. ENGINEER will review, mark, stamp and return submittals to the CONTRACTOR as follows:

1. ***Final for Construction***

   a. CONTRACTOR may commence activities to order, fabricate and perform work covered by the submittal.

2. ***Final for Construction, as Noted***

   a. Comments noted by the ENGINEER shall be incorporated into the work covered by the submittal.
   b. CONTRACTOR may commence activities to order, fabricate and perform work covered by the submittal.

3. ***For Correction and Resubmittal***

   a. CONTRACTOR shall make corrections or develop replacement or alternate product and resubmit in same manner as original submission.
   b. Submittal is not approved.

4. ***Rejected***

a. CONTRACTOR shall make corrections or develop replacement or alternate product and resubmit or submit missing information in same manner as original submission.
b. Submittal is not approved.

SECTION 01 43 24
CHEMICAL GROUT WATERSTOP INSTALLER /INJECTOR QUALIFICATIONS

PART 1 GENERAL

1.1 GENERAL

A. The required long-term performance of the project is directly related to the appropriate, specified surface preparation, proper and thorough chemical grout injection and successful execution of the placement of the surface applied waterstop by the CONTRACTOR.

B. The CONTRACTOR and superintending staff are required to meet specific experience qualifications as follows.

1.2 CONTRACTOR AND SUPERINTENDENT

A. The CONTRACTOR shall have been trained by the distributor in the installation and grouting of the chemical grout waterstop within the last three years.

B. The CONTRACTOR shall submit evidence of the training and successful use of the product.

PART 2 MATERIALS AND EQUIPMENT – NOT USED

PART 3 EXECUTION – NOT USED

END OF SECTION

SECTION 01 45 10
CONTRACTOR'S QUALITY CONTROL

PART 1 GENERAL

1.1 WORK INCLUDED

A. The CONTRACTOR is responsible for implementing and conducting a quality control program that will ensure the timely and cost-effective completion of this project in conformance with the Contract Documents.

B. The CONTRACTOR will perform quality control construction review.

PART 2 MATERIALS - NOT USED

PART 3 EXECUTION

3.1 RESPONSIBILITIES OF CONTRACTOR

A. Coordinate work of all subcontractors and of separate contracts, if any, assigned to the CONTRACTOR.

B. Cooperate with other contractors, if any, performing work on the site under separate contracts.

C. Cooperate with the OWNER in accommodating OWNER-furnished material, furnishings, equipment and its installation and OWNER's construction review.

D. Establish on-site lines of authority and communication.

1. Attend meetings
2. Utilize sequentially numbered and dated forms to document requests for information and clarification.

E. Provide and maintain a competent staff of experienced construction, administrative and supervisory personnel in sufficient numbers to meet the contract completion date.

F. Provide and designate a competent experienced person to perform quality control reviews of all work.

1. This individual's responsibility shall be the review of all CONTRACTOR's work and scheduling final reviews with the ENGINEER.

2. He shall be required to “sign-off” on all work stating that the work is ready for the ENGINEER’s construction review.
3. At the final review the ENGINEER will visually review the work and provide written comments to the CONTRACTOR’s quality control staff person describing work requiring correction.
4. The CONTRACTOR’s quality control staff person will be responsible in addition to the CONTRACTOR’s superintendent for the modification and correction of all non-conforming work viewed by the OWNER’s staff or OWNER’s representative.

G. If the CONTRACTOR fails to provide a competent and experienced person to perform quality control reviews, the OWNER will retain the services of the required staff and deduct their fees for work performed from the periodic progress payments due to CONTRACTOR.

H. Furnish a detailed time schedule of operations for all work on the Project. Monitor the schedule as work progresses and revise schedule at appropriate intervals, or as requested by the OWNER or ENGINEER, to reflect actual progress.

I. Furnish a detailed breakdown of project quantities, pay item, construction activity or Specification index. The OWNER will determine which of these itemizations will be required.

J. Verify that applications for permits, inspections, temporary facilities and permanent utilities are processed in a timely fashion.

K. As described in SECTION 02 00 00 – SITE CONDITIONS, and as described herein, locate, identify, protect and maintain existing potable and non-potable water, gas, sanitary sewer, irrigation, storm drainage pipelines; lighting, power and telephone conduits, cables and wires; and other existing surface and sub-surface structures. Do not disturb, disconnect, operate or damage these improvements during progress of work. Maintain all existing plants and trees, which are to remain. CONTRACTOR shall repair or replace, at his expense, damage to existing improvements, and to adjacent private and public rights-of-way, resulting directly or indirectly from his operations.

L. Resolve conflicts that may develop among subcontractors and vendors over access to, and utilization of, the restricted spaces available for construction activities, materials and equipment.

3.2 COORDINATION

A. The Contract Documents have been reviewed by ENGINEER, and to the best of ENGINEER's knowledge and belief are reasonably free from errors, omissions,

conflicts, inconsistencies, code violations, and improper use of materials. To identify any problems or conflicts that may remain in the Contract Documents, and to expedite their resolution, the CONTRACTOR shall follow the procedures described in referenced Specifications and as described herein.

B. The CONTRACTOR shall carefully study and compare the Contract Documents and at once report to the ENGINEER any error, omission, conflict, inconsistency or code violation he may discover.

C. The CONTRACTOR shall require each subcontractor to read and comply with the requirements of the Contract Documents and this Section. Compliance with these requirements does not obligate the CONTRACTOR, or his subcontractors, to correct the conflicts or problems that are identified without written instructions from the OWNER.

END OF SECTION

SECTION 01 51 00
TEMPORARY UTILITIES

PART 1 GENERAL

1.1 WORK INCLUDED

A. The CONTRACTOR shall provide temporary utilities and facilities which are required for construction operations and to maintain a safe, healthy working environment.

PART 2 MATERIALS

2.1 TEMPORARY SANITARY FACILITIES

A. The CONTRACTOR shall provide chemical toilet with holding tank located near the field office.

B. The CONTRACTOR is responsible for contracting for maintenance of the temporary sanitary facility.

2.2 FIELD OFFICE

A. The CONTRACTOR shall have a field office that has a separate lockable office for use by OWNER and ENGINEER. The area should be no less than 80 square feet.

PART 3 EXECUTION

3.1 TEMPORARY SANITARY FACILITIES

A. The CONTRACTOR is responsible for contracting for maintenance, service and cleaning of the temporary sanitary facility in accordance with regulations and laws that apply and as needed in the opinion of the ENGINEER.

B. A supply of toilet paper and paper towels shall be maintained at the facility.

END OF SECTION

SECTION 01 51 16
TEMPORARY FIRE PROTECTION

PART 1 GENERAL

1.1 WORK INCLUDED

A. Conduct work at the site in a manner to prevent fires.

B. Provide immediate notice to the local fire protection district in the event of a fire. The term “district” is used generically and includes city / town fire departments.

D. Prepare a Fire Plan that lists the equipment and procedures to be followed in the event of a fire on the project site.

E. For the purposes of this specification “near” or “adjacent to” is defined as within 50 feet from portable gasoline powered equipment such as portable generators or saws. Fire extinguishers shall not be mounted to the portable equipment.

1.2 SMOKING AND LUNCH FIRES

A. The building of camp, lunch, warming and any other fire within the project property is prohibited.

B. Smoking is prohibited except inside a building, vehicle or while seated in an area of at least three feet in diameter that is barren or cleared of all flammable materials.

1.3 FIRE RESPONSES / RESPONSIBILITY

A. CONTRACTOR

1. Immediately notify the local fire district in the event of a fire or other emergency.
2. When notifying the district provide the following information.

    a. Exact location of fire and best route to fire.
    b. Size of fire and material (fuel) that is burning.
    c. Nature of incident or emergency.

B. Fire District

1. The district will respond and fight fires occurring on the property according to their regulations and policies.
2. Establish communication with the fire district and obtain the name and telephone number for a non-emergency / coordination contact.

1.4 SUBMITTALS

A. Fire prevention procedures plan prior to the start of construction.

B. List of equipment and procedures that to be used for fire suppression activities.

PART 2 PRODUCTS

2.1 FIRE EXTINGUISHERS

A. Five lb. ABC with a UL rating of 3A – 40BC, or greater.

B. Fire extinguishers shall be mounted on highly visible clearly marked posts or inside the construction trailer as required to meet distance requirements.

PART 3 EXECUTION

3.1 GASOLINE POWERED PORTABLE EQUIPMENT

A. Gasoline powered portable equipment, such as generators or power saws and chain saws shall ,be equipped with a spark arrestor meeting US Forest Service Standard 5100 – Spark Arrestors for Internal Combustion Engines.

B. Any re-fueling of any equipment shall be done in an area, which has first been cleared of material which will carry fire.

3.2 VEHICLES

A. All vehicles shall be equipped with a factory designed muffler system or that is equivalent or that exceeds factory specifications.

B. Exhaust systems shall be properly installed and continually maintained in a serviceable condition.

3.3 FUEL STORAGE

A. Gasoline and other combustible fuels shall be kept in proper storage containers.

B. Store fuels and other combustible materials away from materials that can carry fire.

3.4 FIRE EXTINGUISHERS

A. The CONTRACTOR shall have a fire extinguisher placed near each gasoline-powered generator; welding, flame or abrasive cutting equipment that is in use.

B. In addition to each fire extinguisher required near a generator etc., the CONTRACTOR shall maintain at least two additional extinguishers on site available to immediately suppress a fire.

3.5 WELDING

A. Welding shall be performed in area(s) cleared of all flammable material.

B. Welding near formwork shall be performed in a manner to prevent combustion of wood forms.

3.6 FLAME OR ABRASIVE CUTTING

A. Flame or abrasive cutting, such as cutting of prestressing steel tendon tails, shall be performed in manner to prevent combustion of adjacent wood forms.

B. Clear all combustible materials at least 10-feet away from flame or abrasive cutting activity.

END OF SECTION

SECTION 01 56 50
MESH SAFETY BARRIER

PART 1 GENERAL

1.1 WORK INCLUDED

A. Furnish all labor, tools and equipment and work necessary for, or incidental to, the supply and construction of safety grid fence as shown in the Drawings and specified herein. Use four-foot high fence unless otherwise shown in the Drawings.

B. Where necessary use precast concrete barrier to comply with OWNER and ROW agency requirements and where there could be danger from the property's physical features such as excavations and pipe trenches.

1.2 QUALITY STANDARDS

A. American Society for Testing and Materials (ASTM)

1. ASTM A 702, Specification for Steel Fence Posts and Assemblies, Hot Wrought
2. ASTM D 3787, Test Method for Bursting Strength of Textiles – Constant-Rate-of-Traverse (CRT) Ball Burst Test
3. ASTM D 5034, Test Method for Breaking Strength and Elongation of Textile Fabrics (Grab Test)
4. ASTM F 2286, Standard Design and Performance Specification for Removable Mesh Fencing for Swimming Pools, Hot Tubs and Spas.
5. ASTM G 154, Practice for Operating Fluorescent Light Apparatus for UV Exposure of Nonmetallic Materials

1.3 SUBMITTALS

A. Manufacturer's technical data for fence fabric.

1. Instructions shall specify all requirements for proper assembly, installation and use of mesh safety barrier.

B. Steel Tee posts – certificate of compliance with referenced standards

C. Corner and Angle Point Posts – certificate of compliance with referenced standards

D. Ties

1.4 DESIGN AND PERFORMANCE REQUIREMENTS

A. The top of the fence used as a barrier shall be a minimum of 48 in. above the grade adjacent to the exterior side of the barrier.

B. The distance between vertical support poles and attached mesh, along with other manufactured factors, shall be so designed and fabricated to hinder children's ability to climb.

C. The fence shall have at least 40% open space to allow visibility to the inside of the barrier.

PART 2 MATERIALS

2.1 Mesh

A. The mesh used in the barrier shall have a minimum tensile strength according to ASTM D 5034 of 100 lbf and a minimum burst strength in accordance with ASTM D 3787 of 150 lbf.

B. The fabric height shall be four feet

C. The mesh shall receive a descriptive performance rating of no less than "trace discoloration" or numerical rating of 4 or 5 on a scale of 1 to 5 when tested in accordance with ASTM G 154.

D. The mesh safety barrier shall be constructed to prohibit the free passage of a 4.0-inch diameter rigid sphere at any point through or around it at any point.

E. The mesh shall comply with testing requirements contained in ASTM F 2286.

F. Product Marking

1. Mesh safety barrier, meeting all requirements of this specification shall be labeled, "Meets ASTM Standard F 2286."
2. Manufacturer's name

2.3 METAL TEE POSTS

A. General

1. All posts shall be 6-feet in length with a nominal weight of 8.65 pounds.

2. All posts shall be painted forest green.

B. Line Posts

1. Line posts shall conform with ASTM A 702.
2. The posts shall be furnished as a “T” section.
3. The cross section of T posts shall be approximately 1 3/8-inch wide, 1 3/8-inch wide and 1/8-inch thick
4. Line posts shall have corrugations, knobs, notches or studs so placed and formed to retain wire ties.
5. Each line post shall be manufactured with an anchor plate. The anchor plate shall be made from carbon steel and shall be swaged or riveted to the post in such a manner as to prevent displacement when the posts are driven. The placement of the anchor plate shall be nominally 14 or maximum of 18-inches from the bottom of the post to the uppermost portion of the anchor plate.
6. Posts shall be 6-feet in length with a nominal weight of 8.65 pounds

C. Corner and Angle Point Posts

1. Corner and angle point posts shall comply with ASTM A 702 and the above requirements.
2. Corner and angle point posts shall have two braces and be braced in each direction and comply with the material requirements of ASTM A 702, Paragraph 5.5.

2.4 FASTENERS

A. Fasteners shall not be less than 0.120 in. diameter zinc-coated wire or non-metallic equivalent.

PART 3 EXECUTION

3.1 GENERAL

A. Perform such clearing and grubbing as may be necessary to construct the fence to the required grade and alignment.

B. Components shall not infringe upon adjacent property lines.

C. The mesh safety barrier shall be installed in such a manner that the barrier prevents unsupervised access to the construction area.

D. The bottom of the mesh safety barrier shall not be more than 1-inch above the grade.

3.2 ALIGNMENT BREAKS

A. At locations where breaks in a run of fencing are required, such as at intersections with existing fences, a ditch, canal or channel crossing, appropriate adjustments in fence alignment and/or fence post spacing shall be made to satisfy the requirements for the type of closure indicated or the conditions encountered. Braced posts shall be placed at any terminus.

3.3 POST TOPS

A. The tops of all posts shall be set to the required grade and alignment.

B. Safety tops shall be placed on the top of posts where domestic livestock could come in contact with the fence.

3.4 CONSTRUCTION

A. Fence posts shall be spaced at a maximum of four (4) feet unless it can be shown that a greater spacing will result in compliance with ASTM F 2286. Posts shall be embedded no less than 1-foot 6-inches into compacted soil.

C. Splices in the fabric shall be made at a post.

D Posts shall have an exposure of 4-feet 4-inches minimum and 4-feet 6-inches maximum.

E. Sufficient fasteners shall be used at attach the mesh to posts to assure compliance with the requirements of ASTM F 2286.

3.5 MAINTENANCE DURING PROJECT CONSTRUCTION:

A. Maintain the fence during construction.

B. Damage to the fence shall be repaired within eight (8) hours to the satisfaction of the ENGINEER.

3.6 FENCE REALIGNMENT

A. Realignment of the fence shall only be made with the prior review and acceptance of the ENGINEER.

3.7 CONSTRUCTION TOLERANCES:

A. Maximum variation from plumb: 1/4 inch

B. Maximum offset from true position: 1 inch

C. Post spacing: ± 2 inches

D. Mesh clearance to ground: - 0.5 inch

END OF SECTION

SECTION 03 11 13
CAST-IN-PLACE CONCRETE FORMWORK

PART 1 GENERAL

1.1 WORK INCLUDED

A. Supply all labor, tools, equipment and materials to set forms for the proper placement of concrete for structures such as vaults and water retaining structures.

B. Design and build adequate forms and leave them in-place until they can be safely removed without damaging the concrete (such as pealing).

1.2 SPECIAL REQUIREMENTS

A. All wall and suspended slab formwork, and if required shoring and re-shoring, shall be designed by a Professional Engineer licensed to practice in the state where the project is located and having a minimum of five years' experience in the design of concrete formwork or form systems. Drawings for formwork requiring a PE design shall be sealed accordingly.

B. Form all footings and walls of buried structures. Placement of concrete against the soil excavated to serve as a vertical form is prohibited.

C. Self-perform wall and roof slab formwork for water retaining structures.

D. The formwork supplier shall furnish new wedge pins / bolts / keys with the formwork. Used pins/bolts are unacceptable. If one pin / bolt / key breaks during construction, replace all the pins/ bolts / keys prior to proceeding with further formwork.

E. Hand set "modular", "gang" or "panel" forms faces shall be in an "as-new" condition. **Panel faces shall be free of defects, such as splintered wood, and appearance subject to the acceptance or rejection by the ENGINEER at the start of, and throughout, construction**. Forms that are rejected shall be re-faced, repaired to the satisfaction of the ENGINEER or removed from the project. Acceptance or rejection is not an evaluation of the structural integrity of the form or form system, but only an evaluation of the appearance of the form and its likely impact on the finished concrete surface.

F. For specific requirements for form ties see this Section.

G. Formwork Removal:

1. The forms for any portion of a structure shall not be removed until the concrete has reached a strength, with a factor of safety of 2.0, to withstand applied loads such as self-weight and **wind loads known to occur at the site** or withstand damage when the forms are removed.

2. Regardless of the strength requirements above, both faces of wall forms shall remain in place for a minimum of 24-hours. It is unacceptable to remove the forms of one wall face and leave the other in place for temporary support. Both faces shall be removed at the same time.

H. Wall Form Bracing: Wall forms shall not be braced to slabs using anchors cast or nailed into a slab. Deadmen or other non-penetrating means of supporting wall formwork bracing shall be used.

1.3 QUALITY STANDARDS

A. American Concrete Institute:

1. ACI 318, Building Code Requirements for Structural Concrete
2. ACI 347R, Guide to Formwork for Concrete

B. American Plywood Association:

1. PS 1 – 07 – Structural Plywood
2. J20 - Grades and Specifications
3. V345 - Concrete Forming

1.4 SUBMITTALS

A. General:

1. Design, placement and maintenance of formwork and form systems are the responsibility of the CONTRACTOR. Submittals other than listed herein are not required nor will they be reviewed. The formwork submittal drawing shall show the location of all ties relative to reinforcing, including post-tensioning steel, to ensure proper clearance.
2. The review of formwork submittals is performed only for the limited purpose of checking for conformance with this Specification. The review shall not include an assessment of items such as the accuracy or applicability of the design, completeness of details, dimensions, gauges, construction means or methods, safety precautions, all of which are the sole responsibility of the CONTRACTOR.

B. Product Technical Data:

1. Manufacturer and type of form materials
2. Manufacturer and type of form ties
3. Manufacturer and type of void form including compressive strength
4. Manufacturer of form release agent

C. Formwork Design:

1. Wall and suspended slab formwork drawings shall be stamped with the seal of the designing engineer and signed in accordance with the professional engineer registration laws where the project is located.

PART 2 PRODUCTS

2.1 GENERAL

A. For the purposes of this Specification exposure shall be defined as a surface, interior or exterior, of a structure that will be exposed to view during its use. For example, the interior wall of a buried water retaining structure is a surface exposed to view.

B. Three inches of clearance is required between any tie and an edge of a concrete face.

2.2 FORMING PANELS

A. Four types of overlaid concrete forming panel options that are permitted:

1. Medium-density overlay (MDO)
2. High-density overlay (HDO)
3. Phenolic surface file (PSF)
4. Modified phenolic overlay (MPO)

B. See TABLE 1.

TABLE 1

Finish No.	Product	Finish Type	Wood grain transfer to concrete	Use
1.	MPO on hardwood face	Gloss architectural finish	minimal	Gang and engineered systems for high-alkaline and abrasive concrete – vertical and horizontal concrete
2.	PSF on hardwood face	High-gloss architectural finish	minimal	Vertical concrete, i.e., walls
3.	HDO on hardwood face	Semi-gloss architectural finish	minimal	Vertical concrete, i.e., walls
4.	HDO on hardwood face 120/30	Semi-gloss non-architectural finish	slight	Vertical concrete, i.e., walls
5.	HDO on softwood face 120/30[1]	Semi-gloss smooth non-architectural finish	slight	Vertical concrete, i.e., walls
6.	HDO on hardwood	Semi-gloss non-	moderate	Vertical concrete, i.e.,

TABLE 1				
Finish No.	**Product**	**Finish Type**	**Wood grain transfer to concrete**	**Use**
	face 100/30	architectural finish		walls
7.	HDO on softwood face 100/30	Low-gloss as-cast finish	Moderate to heavy	Vertical concrete, i.e., walls
8.	MDO on softwood or hardwood face	Matte-finish as-cast finish	moderate	Vertical and horizontal concrete

Note 1: HDO 100 / 30 signifies 100 lb per msf / grams per square meter

C. All form edges shall be mill oiled and edge sealed.

D. Form systems shall be used that meet the finish class shown on the drawings.

2.3 FORMS FOR SURFACES NOT EXPOSED TO VIEW

A. All Surfaces:

1. Wood or steel sufficiently tight to prevent mortar leakage.

2.4 FORM TIES

A. All Structures:

1. Only ties manufactured by Dayton-Superior (Symons) are acceptable.
   a. S-Panel Ties with water seal and one-inch break back cones on both tie ends shall be used on all hand set wall forms.
   b. No equivalents.
2. Gates Concrete Forming Co. gang forms, or equivalent, shall utilize stay-in-place inner with water seal (No. 9) style ties and Type A or B removable tie ends with 1 1/2-inch “break-back” cone recess. No equivalents.
3. Through-wall tapered removable ties are unacceptable.
4. Ties lacking positive locking control of section thickness are unacceptable.

B. Twisted wire ties with loops to hold forms in position are not permitted.

2.5 CHAMFER STRIP

A. Chamfer strips (3/4 inch) shall be placed in the corners of forms and at the tops of walls or up-turned footings, to produce beveled edges on permanently exposed concrete surfaces. Interior angles of intersecting concrete surfaces and edges of construction joints shall not be beveled unless otherwise indicated in

the Drawings. The chamfer strip may be made of wood or polyvinyl chloride (PVC).

2.6 STIFFBACKS

A. Stiffbacks for wall forms shall be constructed of aluminum channels, lumber or Glulams, which are uniform in width and thickness, free from knots and other surface defects. Only one joint is permitted in the board of a stiffback and joints shall be offset so as to not occur at the same point. Stiffbacks shall extend to a point not less than 6 inches above the top of forms.

2.7 WHALERS

A. Whalers for wall forms shall be constructed of aluminum channels or lumber, which is uniform in width and thickness and free from knots and other defects.

B. Whalers for curved walls shall maintain the desired degree of curvature.

2.8 WEDGE INSERTS

A. When permitted by the ENGINEER at the tops of walls or columns, wedge inserts may be used to support future formwork or catwalks. The inserts shall be Richmond Screw Anchor.

2.9 FORM RELEASE AGENT

A. General:

1. Form release agent residue on the concrete shall be thoroughly removed by a light water or sand blast.

B. Farm Fresh XL by Dayton-Superior

C. Clean Strip™ J1EF by Dayton-Superior (NSF Certified)

PART 3 EXECUTION

3.1 GENERAL

A. Forms shall be used, wherever necessary, to confine the concrete and shape it to the specified lines and grades as shown on the Drawings. Set and maintain concrete forms to ensure completed work is within all applicable tolerance limits. If a type of form does not, in the opinion of the ENGINEER, consistently perform in an acceptable manner, the type of form shall be changed and the method of erection shall be modified by the CONTRACTOR, subject to the review of the ENGINEER.

B. Forms shall have sufficient strength to withstand the pressure resulting from placement and vibration of concrete, and shall be maintained rigidly in position. The design of formwork and placing rate of concrete with medium and high-

range water reducing agents shall be adjusted to compensate for the greater hydraulic pressures exerted on the forms by concrete of high fluidity.

C. Forms shall be clean and free from mortar and other foreign material from previous use prior to being placed.

D. Demonstrate that forms are vertical, proper alignment, grade or radius when requested by the ENGINEER.

E. Review the formwork prior to concrete placement to ensure that all ties and tie keys locking the formwork to the tie are in place.

F. Review all ties prior to their use to ensure proper welding and lack of defects such as nicks, which could compromise their performance.

G. Form ties shall not be bent to remedy alignment conflicts between form ties and reinforcing steel. Bent ties shall be removed and replaced with straight ties and the alignment conflict resolved with the ENGINEER.

H. The CONTRACTOR is responsible for damage and injury caused by removing forms carelessly or before the concrete has gained the required strength. Means and methods of repair shall be reviewed by the ENGINEER prior to performing the work.

3.2 FORM SURFACE TREATMENT

A. Prior to placing reinforcing steel coat the forms with a non-staining release agent that will effectively prevent the absorption of moisture and prevent bond of the concrete to the form. Contact with hardened concrete against which fresh concrete is to be placed is prohibited. All bond breaking materials or processes shall be used only after acceptance by the ENGINEER. Care shall be taken in applying form oil to avoid contact with reinforcement steel. Embedded material, which becomes coated with form oil, shall be thoroughly cleaned or replaced at the expense of the CONTRACTOR.

1. Forms shall be recoated as required to facilitate removal and to prevent stripping damage to green concrete.

B. Potable Water, Stream, Lake and Reservoir Facilities

1. Form release agents for potable water, stream, lake and reservoir facilities shall be non-toxic 30 days after application or NSF 61 – Health Effects certified.

3.3 TOLERANCES

A. Tolerances are defined as allowable variations from specified alignments, grades and dimensions. Allowable variations from specified alignments, grades and dimensions are prescribed in the following sub-section. Descriptions of these criteria can be found in Part 2 of the ACI Manual of Concrete Practice,

Commentary of Standard Specifications for Tolerances for Concrete Construction and Materials (ACI 117-90).

B. Footings:

1. Level:
   a. Variation from specified elevation +1/2 inch, - 1/2 inch
   b. Relative Grid Alignment: ≤ ± one inch
2. Cross-sectional dimension:
   a. Horizontal dimension: Variation +2 inch, -1/2 inch
   b. Vertical dimension (thickness): Variation ± 1/2 inch

C. Walls:

1. Vertical Alignment:
   a. Variation from Specified plumb ≤3/8 inch (full wall height)
   b. Variation from specified plumb ≤1/4 inch in eight feet
2. Radius:
   a. Variation in Radius in any 20 feet of wall length: ≤ 1/2 inch
   b. Variation in Radius in a segment: ≤ one inch
3. Grade top of wall:
   a. Variation from specified elevation +1/4 inch, - 1/4 inch
4. Thickness:
   a. Variation in design thickness, -0 inch, +1/4 inch

D. Openings:

1. Floor Slab, Wall and Roof Slab Openings:
   a. Radius: + 1/8 inch, - 1/8 inch
   b. Location: Variation ±2 inches
   c. Out of Round: + 1/8 inch, - 1/8 inch
   d. Cross-section (non-circular) Dimensions: ≤ ± one inch

3.4 PLUMB AND STRING LINES

A. Plumb and string lines shall be installed on wall forms before, and maintained, during concrete placement. There shall be an adequate number of plumb or string lines in walls, for example at every other stiffback, properly installed to permit continuous monitoring.

B. During concrete placement, continually monitor plumb and string line positions and immediately correct deficiencies.

C. The plumb and string lines shall extend to a point at least six inches above the top of wall or column.

3.5 FORMWORK CAMBER

A. In order to maintain specified tolerances of joists, beams or slabs subject to dead load deflection, camber formwork to compensate for dead load deflection prior to hardening of the concrete.

3.6 HAND SET MODULAR FORMS

A. Hand set modular forms, such as Symons hand set steel-ply forms, may be placed in any pattern provided that the wall meets the tolerance requirements of this Specification.

3.7 FORMWORK CLOSURE

A. Forms shall not be placed until the ENGINEER has performed a final review of items such as the reinforcing steel and waterstops. Reviews shall be scheduled no later than 24 hours prior to closing the formwork.

B. Use compressed air from an air-compressor to blow-out construction debris and dirt at the bottom of sections or members to be placed such as walls, slabs, beams and columns, prior to placing forms or concrete. Demonstrate to the ENGINEER that all debris, such as loose concrete particles, saw dust, loose tie wire, bar tags, tape, trash, ice, snow and dirt have been thoroughly removed.

3.8 HOT OR COLD WEATHER PLACEMENT AND STEEL FORMS

A. Prior to placing concrete when steel forms are used, the forms shall be heated when the surface temperature of the form is below 40°F or cooled when the surface temperature of the form is above 90°F.

B. If water is used to cool forms where ponding of water may occur, i.e., at the bottom of a wall, the water shall be permitted to drain prior to placing concrete.

3.9 FORM REMOVAL

A. The concrete strength shall be high enough to withstand the forces generated by a “swelling” hydrophilic rubber waterstop. See SECTION 03 15 12.

3.10 RESHORES AND TEMPORARY SUPPORT

A. When a re-shore and temporary support plan is to be performed it shall comply with this Specification.

END OF SECTION

SECTION 03 15 10
POLYVINYL CHLORIDE (PVC) WATERSTOPS

PART 1 GENERAL

1.1 WORK INCLUDED

A. This work consists of furnishing and placing polyvinyl chloride (PVC) waterstops in accordance with these Specifications and in conformity with the Drawings.

1.2 QUALITY STANDARDS

A. American Society for Testing and Materials (ASTM)

1. D 570 - Standard Test Method for Water Absorption of Plastics
2. D 624 - Test Method for Tear Strength of Conventional Vulcanized Rubber and Thermoplastic Elastomer
3. D 638 - Standard Test Method of Tensile Properties of Plastics
4. D 746 - Standard Test Method for Brittleness Temperature of Plastics and Elastomers by Impact
5. D 747 - Standard Test Method for Apparent Bending Modulus of Plastics by Means of a Cantilever Beam
6. D 792 - Standard Test Methods of Density and Specific Gravity of Plastics by Displacements
7. D 1203 - Standard Test Methods for Volatile Loss From Plastics Using Activated Carbon Methods
8. D 2240 - Standard Test Method for Rubber Property - Durometer Hardness

B. Corps of Engineers

1. CRD-C 572

PART 2 PRODUCTS

2.1 PHYSICAL PROPERTIES

PROPERTY	TEST METHOD	AVERAGE VALUE
Tensile Strength	ASTM D 638	2110 psi
Ult. Elongation	ASTM D 638	390
Specific Gravity	ASTM D 792	1.35
Stiffness in Flexure	ASTM D 747	1220 psi

PROPERTY	TEST METHOD	AVERAGE VALUE
Tear Resistance	ASTM D 624	372 lbs./in.
Hardness. Shore A/15	ASTM D 2240	74
Volatile Loss	ASTM D 1203	0.40%
Ozone Resistance	ASTM D 1149	passed
Low Temperature Brittleness (at -40°F)	ASTM D 746	passed
Water Absorption (max.)	ASTM 570	0.15%
Tensile Strength After Accelerated Extraction	CRD-C 572	2060 psi
Elongation After Accelerated Extraction	CRD-C 572	370%
Effect on Alkali after 7 days: Weight Hardness	CRD -C 572	passed +0.05% +4

2.2 FITTINGS

A. Fittings shall meet the physical properties described above.

B. Fittings such as tees, ells and crosses shall be factory fabricated.

2.3 FIELD SPLICES

A. PVC waterstops shall be neatly spliced in accordance with the manufacturer's directions.

B. Excessive PVC “weld splatter” is unacceptable.

C. No more than one splice is permitted in 50 linear feet of waterstop.

D. The ENGINEER shall review all splices for integrity.

PART 3 EXECUTION

3.1 PREPARATION FOR INSTALLATION

A. All waterstops shall be stored under protective tarps to keep free of oil, dirt and sun UV degradation. Waterstops not protected in accordance with this Specification will be rejected.

B. Uncoil waterstops at least 48 hours prior to installation. Lay the waterstops flat prior to installation to promote easier installation and fabrication.

C. Do not lay out the waterstop in mud or debris.

D. Protect the waterstop from punctures.

E. The CONTRACTOR shall do any work necessary, including heating the waterstop in the range of 125°F – 150°F as recommended by the manufacturer, to re-establish the proper waterstop configuration, which may have been altered due to shipping in rolls, i.e., the tear web or large bulb becoming flattened against the waterstop "legs". Tear web bulbs shall be perpendicular to the embed legs of the waterstop and have the proper shape. Circular bulbs shall be round and in proper alignment to the embed legs.

F. Coordinate reinforcing placement and positioning for proper installation of waterstop.

G. Pre-fabricate waterstops for use in pipe slab penetrations in order to achieve the proper shape and waterstop geometry including proper bulb configuration and alignment.

3.2 PLACEMENT

A. Locate the waterstop in the joint as shown in the Drawings.

B. When installed in expansion joints the centerbulb or tear web bulb, depending on the type of waterstop, shall be placed un-embedded and centered in the joint.

C. Bulbs shall conform to the proper geometry, shape and orientation. If the tear web bulb or bulb type waterstop is not in conformance with the proper geometry, shape and orientation as detailed illustrated by the manufacturer and the Drawings, the CONTRACTOR shall remove the waterstop and replace it with a waterstop that in is conformance with the manufacturers details and illustrations.

D. Securely tie the waterstop to reinforcing steel using hog rings crimped between the last two ribs or into the end bulb at 12-inch maximum centers. Both the

portion of the waterstop that will be encased in concrete and the portion initially un-encased shall be tied to supports at 12-inch centers to assist in maintaining waterstop alignment during concrete placement.

3.3 CONCRETE PLACEMENT

A. Thoroughly and systematically vibrate the concrete around the waterstop for positive contact between the waterstop and concrete.

B. All horizontal joints shall be completely clean so that dirt and construction debris do not interfere with direct contact of the concrete with the waterstop.

C. When placing concrete the CONTRACTOR shall be careful to avoid deflecting the waterstop out of its proper position.

D. Concrete shall be brought up in uniform lifts on both sides of the waterstop as a means of promoting proper waterstop alignment.

3.4 PLACEMENT TOLERANCE

A. The waterstop shall be no more than $\pm$ 1/2 inch from the designed horizontal alignment and within 1/4 inch vertically.

3.5 SPLICE JOINT IDENTIFICATION

A. After the concrete has hardened, mark the location of any splices on the top surface of the concrete for future reference in the event of water seepage through the joint in the waterstop.

END OF SECTION

SECTION 03 15 11
CHEMICAL GROUT WATERSTOP

PART 1 GENERAL

1.1 WORK INCLUDED

A. Furnish and install permeable grout tubes where shown at construction joints in the Drawings.

B. The work includes cleaning the concrete surface, installation of permeable grout tubes and injection of grout tubes with chemical grout.

C. If the grout tube is blocked, which flushing does not eliminate, and leaks present, the ENGINEER shall require the installation of drilled holes for mechanical injection of chemical grout.

D. Regardless of a passing watertightness test on a water retaining structure, such as a water storage tank, the chemincal grout waterstop shall be injected.

1.2 QUALITY STANDARDS

A. American Society for Testing and Materials (ASTM):

1. D 93 - Flash Point by Pensky-Martens Closed Cup Tester
2. D 412 - Test Methods for Vulcanized Rubber and Thermoplastic Rubbers and Thermoplastic Elastomers – Tension
3. D 1042 - Test Method for Linear Dimensional Changes of Plastics Under Accelerated Service Conditions
4. D 1638 - Methods of Testing Urethane Foam Isocyanate Raw Materials
5. D 3574 - Methods of Testing Flexible Cellular Materials - Slab, Bonded, and Molded Urethane Foams

B. National Sanitation Foundation (NSF):

1. NSF 61 Drinking Water System Components – Health Effects

1.3 QUALITY ASSURANCE

A. The components and installation procedures shall be in accordance with the manufacturer's printed Specifications and recommendations.

B. Installation can be made by the CONTRACTOR; however it shall be performed under the direct supervision of a manufacturer's representative.

C. Injection of the chemical grout shall be done by a manufacturer's licensed applicator.

1.4 DELIVERY, STORAGE AND HANDLING

A. Deliver materials in original, tightly sealed containers or unopened packages with the manufacturer's name, labels and product identification.

B. Materials shall be stored in a secure, dry area until installed.

C. A sufficient quantity of grout tubes and chemical grout shall be stored on site or be readily available prior to starting the work. Work shall be continuous from start to completion.

1.5 SUBMITTALS

A. MSDS sheets

B. Product data

C. Grout pump product data

PART 2 PRODUCTS

2.1 PERMEABLE GROUT TUBES

A. Tubes shall be constructed to resist the pressures of freshly placed concrete.

B. Tubes shall have a filter layer to prevent the entry of cement particles into the tube, yet allow for easy passage of the chemical grout during injection over the length of the tube.

C. Tubes shall have protection for the filter layer to resist the abrasive effects of the concrete and aggregates.

2.2 CHEMICAL GROUT

A. The grout shall be a hydrophobic polymer of the isocyanate type, which is installed by injection. The uncured urethane grout shall have a viscosity of 650 + 200 cps (at 68°F) and be 100% solids.

B. When the chemical grout is mixed with approximately 10% water, the sealing material shall expand and cure to a closed cell foam with a tensile strength of 150 psi (ASTM D 412) and 250% elongation (ASTM D 3574).

C. The sealing material shall have the ability to react in moving water and the viscosity shall remain the same until gelation occurs.

D. Grout shall have the capability to expand up to 300% in volume.

E. Grout shall be ANSI/NSF 61 certified.

F. Shrinkage shall be less than 4% as defined by ASTM D 3574.

2.3 ACCLERATOR

A. The accelerator shall be able to control the reaction time from one minute to one hour.

B. The viscosity shall be 5 cps @ 68°F.

2.4 WATER

A. Only potable water is acceptable for use in flushing grout tubes.

2.5 MIXING TANKS

A. Plastic or metal mixing tanks shall be used. Other materials are unacceptable.

2.6 ACCEPTABLE

A. De Neef Flexcure SLV thalate free chemical grout, no substitutes.

PART 3 EXECUTION

3.1 GENERAL

A. Permeable grout tubes shall be installed at locations shown in the Drawings.

B. Tubes shall be placed to avoid potential pinching by reinforcing steel and form ties. A minimum clearance of 1 1/2 inches is required.

3.2 PREPARATION

A. Surfaces shall be clean and free of dirt, saw dust, laitance, grease, form oils, or other contamination, prior to installation of the grout tubes.

3.3 GROUT TUBE INSTALLATION

A. Grout tubes shall be securely fastened to concrete surfaces, or PVC waterstops if shown in the Drawings, using the provided clips every 12 inches.

B. Cut tubes using a wire cutter.

C. Do not install grout tube that is frayed or cut. Grout tube that is frayed or cut or will permit the intrusion of cement paste shall be removed and replaced.

D. Direct contact of the grout tubes with the surface that the waterstop is to be attached is required. Adjust grout tubing to assure 100% contact by stretching the tube and adjusting clip fasteners. Gaps between the tube and the surface are unacceptable.

E. Tees for grout ports shall be securely fastened to the tube. If required, tape the port to the tube. Grout tube ports shall extend a minimum of 12 inches outside of the concrete form face. Similarly, grout ports shall be placed such that at

least 12 inches of the port is placed in the concrete. Grout ports shall be placed to avoid conflicts with bearing pads and other appurtenances. Unless otherwise shown in the Drawings or necessitated by construction, tees and grout ports shall be placed every 100 feet maximum.

F. The CONTRACTOR shall exercise caution to avoid crimping the tube against items, such as reinforcing steel that will prevent the flow of grout through the tube.

G. Overlap tubes by a minimum of one inch with the tube trumpets fixed tightly together. See Figure 1.

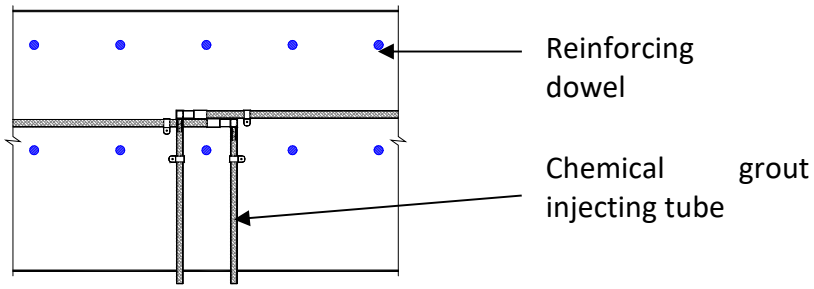

Figure 1.

H. Extend end of clear reinforced PVC tubing so it extends a minimum of one foot outside of the form / concrete. Cover tube opening with tape to prevent debris from entering tube.

I. During the final review of the installation, use duct tape to cover any frayed or cut tube that will permit the intrusion of cement paste that cannot practically be removed and replaced. No more than 2% (as determined by length of repair versus total length between grout ports) of the tube can be repaired with tape. If more than 2% is taped it shall be completely removed and replaced.

J. Prior to closing forms review the tube to assure the flow of grout from port to port.

3.4 GROUT INJECTION PREPARATION

A. After the concrete has cured, grout ports shall be exposed and cleaned. If grouting is to be performed later in the work, the port shall be protected from damage and intrusion of foreign material and water.

B. The scheduling of the injection process shall be determined by the ENGINEER or as shown in the Drawings. Grouting shall not be performed during conditions where water in the tube may freeze unless otherwise reviewed and accepted by the ENGINEER.

C. Insert hose barb and secure barb to tube

D. Each section of tube should be tested with water to a minimum pressure of 100 psi to insure tube is clear. Care shall be taken when testing grout tube to avoid

displacement of any bearing pads that are used to support a wall. Note location(s) of excessive water leakage that can occur due to poorly consolidated and vibrated concrete. These reaches of grout tube may require additional accelerator for faster grout set time and to prevent excessive grout loss. Water shall be flushed through the tubes and pressurized regardless of the presence of ground water or water seeping from water stored in a concrete structure.

E. If a blockage is encountered, promptly inform the ENGINEER. Determine any means and methods of attempting to clear the blockage.

F. Grouting shall not be commenced until all sections of tube have been pressure tested.

3.5 GROUT MIXING AND HANDLING

A. Grout mixing and handling shall be in accordance with the manufacturer's recommendations and be performed in a manner to prevent contamination of the grout with materials, such as dirt or debris that could prevent proper installation and curing.

3.6 CHEMICAL GROUT INJECTION

A. After completion of concrete work, cleaning of the port, flushing and pressurizing of the tube as described above, and after post-tensioning of the structure for post-tensioned concrete construction, the chemical grout shall be injected through the grout ports. The pressure shall be sufficient to ensure thorough and proper injection. As soon as material appears at the other end of the tube, close the effluent port and increase pump pressure to force injection of the grout into any small voids or cracks. Terminate injection of the chemical grout when sealing material uniformly percolates out of the joint or a constant pressure is reached for a time period of a minimum of three and a maximum of five minutes. This pressure may range from as low as 5 psi to as high as 1000 psi depending on crack widths and void volumes.

B. Grayco 395 or 495st electric grout pumps shall be used.

C. Accelerator shall not be used unless faster set times are required due to grout loss through concrete voids and approved by the Engineer.

D. If the injection work is being performed on a storage reservoir floor-wall joint with the wall supported by bearing pads continuously observe the pads to confirm that they are not being displaced by grout under pressure. Injection pressure shall be sufficient to thoroughly inject the tube but at a level to avoid bearing pad displacement.

E. Ports shall not be removed until the ENGINEER has accepted the chemical grouting.

3.7 GROUT PORT REMOVAL

A. Grout ports shall be trimmed back from the surface of the concrete a depth of one inch and patched with materials as specified for form tie holes or tendon anchorage pockets.

END OF SECTION

SECTION 03 15 12
HYDROPHILIC RUBBER WATERSTOP

PART 1 GENERAL

1.1 WORK INCLUDED

A. Furnish and securely install hydrophilic rubber (HR) waterstops where specified or shown in the Drawings.

B. The Work includes cleaning of concrete surfaces and installation of expanding HR waterstop.

1.2 QUALITY STANDARDS

A. American Society for Testing and Materials:

1. D 412 - Test Methods for Vulcanized Rubber and Thermoplastic Rubbers and Thermoplastic Elastomers - Tension
2. D 395 - Test Methods for Rubber Property - Compression Set
3. D 2240 - Test Method for Rubber Property - Durometer Hardness

1.3 QUALITY ASSURANCE

A. The components and installation procedures shall be in accordance with the manufacturer's printed Specifications and recommendations.

B. Installation shall be performed by skilled workers who are trained in procedures and methods required for proper performance of the waterstop.

1.4 DELIVERY, STORAGE AND HANDLING

A. Deliver the waterstop materials to the project site in the manufacturer's unpacked containers with all labels intact and legible at time of use.

B. Materials shall be stored in a secure, indoor, dry area. Maintain the waterstops in a dry condition during delivery, storage, handling, installation and concealment.

1.5 SUBMITTALS

A. Adhesive Product Data.

B. Waterstop Product Data.

PART 2 PRODUCTS

A. HYDROPHILIC RUBBER WATERSTOP

B. HR Waterstop:

1. The waterstop shall have the minimum performance standard of:

PROPERTY	ASTM STANDARD	RESULTS
Tensile Strength	D 412	0.98
Elongation	D 412	550
Hardness (HD 2240)	ASTM D 792	30 Duro Shore A
Stiffness in Flexure	ASTM D 747	1220 psi

2. The time period to maximum volume expansion shall be 35 days.

2.2 ACCEPTABLE MANUFACTURER

A. Manufacturer and model number approved for use (no substitutes):

1. Adeka KBA-1510FP
2. Adeka MC-2005M
3. Adeka MC-2010M
4. Adeka KM-3030M
5. Adeka P-201
6. Adeka KC series of waterstops

2.3 ADHESIVE

A. 3M-2141 as manufactured by the 3M Company

B. Bostik 1142M Adhesive.

C. Adeka P-201.

PART 3 EXECUTION

3.1 GENERAL

A. Coordinate as required with other trades and SECTION 03 30 00, to assure proper execution of the waterstop installation.

B. Examine the concrete surface and correct any surface imperfections, which will prevent proper installation and performance of the waterstop. The finished concrete surface, prior to surface preparation, shall be equal to a steel trowel finish.

3.2 SURFACE PREPARATION

A. Concrete surfaces shall be clean and free of dirt, saw dust, laitance, grease, form oils, form release agent, or other contamination to insure proper adhesion of the waterstop to the concrete surface.

B. Prior to adhering the HR waterstop to the concrete, the concrete shall be blasted with a light sand blast, washed with a wet broom and dried. The ENGINEER may permit brushing with a wire brush in lieu of a light sand blast. After cleaning the concrete shall be completely clear of all construction debris and free of curing compound, oil, grease, concrete dust and other materials that will prevent a complete bonding of the HR waterstop to the concrete.

C. Surface deformations in the concrete that will inhibit adhesion of the HR waterstop to the concrete shall be ground smooth or leveled with a repair grout or Adeka P 201 to the satisfaction of the ENGINEER.

3.3 WATERSTOP PLACEMENT

A. Measure and cut an exact length of waterstop.

B. Splices are not permitted in the waterstop in vertical wall joints of structures.

C. Splices in horizontal joints are acceptable, however, only one splice is permitted in 25 feet or changes in alignment. Splice of waterstops in horizontal joints shall be made by butting and gluing the ends of the waterstop with an approved adhesive.

D. Refer to the manufacturer's recommendations for minimum clearance to a concrete face. Unless a greater clearance is recommended by the manufacturer the minimum clearance shall be four inches given a concrete compressive strength of 3,000 psi. Use the greater clearance if the recommended clearance is more than four inches or concrete strength less than 3,000 psi, especially when forms are stripped.

E. Placement of the HR waterstop shall conform to the details shown on Drawings and these Specifications.

F. The waterstop shall be clean and free of all foreign substances including dust, oil, grease, etc. The ENGINEER will reject any waterstop that is not clean and free of foreign substances.

G. The ENGINEER shall review the length of waterstop to be glued to the concrete prior to placement.

H. Apply a uniform, generous brush coat of adhesive to both surfaces using a thin brush. Bond to the concrete while adhesive on both the rubber and concrete surfaces are aggressively tacky. Use care to avoid applying too wide a bead of glue to the concrete. Excess adhesive on the concrete is not acceptable and shall be removed as directed by the ENGINEER.

1. Gaps in the glue application shall not be permitted.

2. After the adhesive has dried to a tacky condition (about 15 minutes in the summer and 30 minutes in the winter), firmly press the waterstop to the concrete surface.
3. When installing the HR waterstop on curved surfaces such as pipes, temporary bands, i.e., wire or rope, may be used to assist in securing the waterstop to the surface.
4. Any temporary means of securing the HR waterstop shall be removed prior to placing concrete or grout.

I. After the adhesive has cured check the HR waterstop adhesion. If it can be pulled from the concrete, re-apply adhesive to the waterstop and adhere the waterstop to the concrete.

J. Cleanup excess adhesive from any contact with the concrete using 3M No. 2 or 3 solvent. When using the solvent follow the manufacturer's recommendations carefully, including extinguishing all sources of ignition from the area.

K. When the HR waterstop contains a stainless steel screen, such as the MC-2010M, the waterstop shall be oriented with the screen parallel to the construction joint.

3.4 CONCRETE PLACEMENT

A. Concrete placement within 12 hours is required.

B. The HR waterstop shall be protected from water and from displacement prior to concrete placement. If the HR waterstop is exposed to water for more than one hour it shall be replaced.

C. During concrete placement, visually observe the HR waterstop to assure proper adhesion, placement and alignment.

3.5 PLACEMENT TOLERANCE

A. To a free edge of concrete: -0 inches, +1/2 inch

B. Proper HR waterstop orientation: no tolerance, proper orientation required.

1. The long dimension of unreinforced HR waterstops shall be placed parallel to the construction joint.
2. Reinforced HR waterstops shall be placed with the reinforcement parallel to the construction joint.

3.6 CONCRETE STRENGTH PRIOR TO FORM REMOVAL

A. Waterstop swelling force can occur to spall concrete if the concrete lacks either adequate strength or if the HR waterstop lacks proper cover to a free edge prior to removing forms.

B. The CONTRACTOR shall obtain the most current data from the supplier regarding required concrete strength and cover to a free edge prior to removing forms at a construction joint, such as a reservoir vertical wall joint.

C. If spalling of concrete at the joint does occur, submit the means and methods of repairing spalled concrete to the ENGINEER for review and acceptance prior to performing any repair.

END OF SECTION

SECTION 03 15 13
SEALING STRIP WATERPROOF MEMBRANE

PART 1 GENERAL

1.1 WORK INCLUDES

A. The CONTRACTOR shall apply the Hypalon® sealing strip membrane to joints and cracks in concrete walls and floors of cast-in-place concrete water retaining and below grade structures as shown on Drawings and as specified in this section.

B. Unless otherwise directed by the ENGINEER in writing, the membrane shall include all labor, surface preparation, tools, equipment and materials for a complete installation.

1.2 QUALITY STANDARDS

A. American Society for Testing and Materials

1. ASTM D 412 – Test Methods for Vulcanized Rubber and Thermoplastic Rubbers and Thermoplastic Elastomers - Tension
2. ASTM D 624 – Test Method for Tear Strength of Conventional Vulcanized Rubber and Thermoplastic Elastomers
3. ASTM D 903Test Method for Peel or Stripping Strength of Adhesive Bonds

1.3 SUBMITTALS

A. General

1. Submit manufacturer's certification that proposed materials, details and systems as indicated and specified fully comply with manufacturer's details and specifications.
2. If any portion of the Contract Documents does not conform to manufacturer's standard recommendations, notify the ENGINEER that the Drawings and Specifications are at variance with manufacturer's specifications.

B. Product Data

1. Submit manufacturer's descriptive literature and product specifications for each product.
2. Submit laboratory tests or data that validate product compliance with the performance criteria specified.

3. MSDS Sheet
4. NSF 61 Certifications

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications

1. Company specializing in manufacturing Products specified in this Section with minimum five years documented experience.

B. Installer Qualifications

1. Acceptable to manufacturer with documented experience on at least five projects of similar nature in past five years or training provided by the product manufacturer.

1.5 DELIVERY, STORAGE AND HANDLING

A. Deliver and store in a dry area between 40° F (5° C) and 95° F (35° C). Handle and protect in accordance with manufacturer's instructions.

B. Deliver materials in manufacturer's unopened containers, fully identified with brand, type, grade, class and all other qualifying information. Provide Material Safety Data Sheets for each product.

C. Take necessary precautions to keep products clean, dry and free of damage.

1.6 SYSTEM REQUIREMENTS

A. Coordinate installation work with work of other trades.

B. Provide materials and accessories in timely manner so as not to delay the Work.

1.7 PROJECT CONDITIONS

A. Condition material at a temperature ranging from 65° F (18° C) to no more than 85° F for at least 48 hours before application.

B. Do not apply materials to cold surfaces. The minimum surface and ambient air temperatures shall be 40° F.

PART 2 PRODUCTS

2.1 MANUFACTURERS

1. Approved Manufacturers: Sika® – Sikadur® Combiflex®
2. Requests for substitutions will be considered only if submitted to the ENGINEER in writing and must include substantiation of product performance.

2.2 MATERIALS

A. Adhesive Material – Sikadur 31, Hi-Mod gel adhesive with the following characteristics:

1.Color:	Gray
2. Mixing ratio:	2:1 by volume (Component A to B
3. Consistency:	Non-sag paste
4. Pot life:	Approximately 30 minutes @ 73° F
5. Tack-free time:	2-3 hours
6. Tensile properties (ASTM D 638):	3,600 psi @ 14 days
7. Flexural properties (ASTM D 790:	4,400 psi @ 14 days
8. Shear strength (ASTM D 732)	3,400 psi @ 14 days
9. Bond strength (ASTM C 882)	2,400 psi 14 day moist cure
10. Water absorption:	0.79% total in 24 hours
11. Compressive strength	(ASTM D 695)12,000 psi @ 14 days @ 73° F
12. Modulus of elasticity:	3.9 x 10^5

B. Hypalon Sheet

1. Width:	4" (x 20-feet long)
2. Thickness:	40 mils
3. Tensile strength:	1,000 psi
4. Elongation at break:	800%
5. Tear resistance (ASTM D 624 Die C)	250 lb./in.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine substrates and adjoining construction, and conditions under which Work is to be installed.

B. Do not proceed with Work until unsatisfactory conditions are corrected and surfaces properly prepared.

C. One splice will be permitted. Overlap sections of membrane a minimum of six inches.

3.2 PREPARATION

A. Protect adjacent surfaces not designated to receive waterproofing by taping to permit a “neat” line of epoxy application. Remove tape prior to setting of epoxy.

B. Substrate Preparation

1. New Construction

a. Remove contaminants, such as oil, grease, dirt, loose particles, remains of form oils, water repellents, rust or other coatings, by high-pressure water blasting (>3000 psi), wet or dry sand blasting, or other mechanical means to produce surfaces suitable for application of membrane.
b. Surface must be clean and sound
c. The surface may be damp but shall be free of standing water and any contaminants.
d. Surface shall have an “open textured” appearing finish.

2. Existing Construction

a. Remove surface deposits and rust by high-pressure water blasting (>3000 psi), wet or dry sand blasting, or other mechanical means to produce surfaces suitable for application of membrane.
b. Protect any existing sealant in the joint and the wall concrete outside of the extent of the sealing strip during this process to prevent loss of the sealant and concrete surface. Material, such as steel, shall be used to delineate the surface to be blasted.
c. Surface must be clean and sound
d. The surface may be damp but shall be free of standing water and any contaminants. Use fans or other means to dissipate excess condensation and moisture on the wall.
e. Surface shall have an “open textured” appearing finish.

C. Fill bug holes larger than ¼-inch in diameter and 1/8 inch deep with a patching mortar. SEE SPECIFICATION SECTION O3616 – GROUT FOR TIE HOLES.

D. Sikadur 31, Hi-Mod Gel

1. Pre-mix each component of Sikadur 31, Hi-Mod Gel.

2. Proportion 1 part Component “B” to two parts Component “A” by volume into a clean pail. Use calibrated measuring devices for, one for each component to assure volume measurements.
3. Mix thoroughly for three minutes using a Sika paddle on a low-speed drill (400 – 600 rpm) until uniform in color.

3.3 INSTALLATION

A. General

1. The temperature of the substrate and air shall be as described in paragraph 1.7 – PROJECT CONDITIONS.

B. Wipe Hypalon sheet with activator a minimum of one hour and a maximum of eight hours before installation.

1. Protect sheet after wiping with activator from contact with water and debris, such as dirt, saw dust and other surface contaminants.
2. If, in the opinion of the ENGINEER, the activated sheet becomes contaminated it shall be discarded.

C. Apply the mixed Sikadur 31, Hi-Mod Gel, 1-1/2 inches on each side of the joint to a thickness of 1/32 inch.

1. Work into the substrate for positive adhesion.
2. Set the sheeting into the epoxy.
3. Using a hard roller force the sheeting into the epoxy.
4. Apply a 1/32 inch thick layer of epoxy as a top cost to the Hypalon sheet.
5. One “splice” is permitted in the sheet per joint. Lap sheet a minimum of eight inches. Sheeting may be bonded together thermally with a hand-welding tool, such as a Leister heat welder, or by activator.
6. The maximum application thickness of epoxy is 1/8 inch.

3.4 CLEAN UP

A. In case of spills or leaks, wear suitable protective equipment, contain spill, collect with absorbent material. Ventilate area. Avoid contact. Dispose of clean-up materials in accordance with applicable regulations.

3.5 ACCEPTANCE

A. Remove left over materials and any foreign material resulting from the work from the site.

B. Clean adjacent surfaces and materials.

END OF SECTION

SECTION 03 15 14
FLEXIBLE CEMENTITIOUS WATERPROOF MEMBRANE

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Furnish, prepare surfaces and apply the cementitious membrane to joints and cracks in concrete walls and floors of cast-in-place concrete water retaining and below grade structures as shown on Drawings and as specified in this Section.

B. Unless otherwise directed by the ENGINEER in writing, the membrane shall include an elastomeric tear-resistant breathable tape.

1.2 QUALITY STANDARDS

A. American Society for Testing and Materials:

1. C 109 - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars.
2. C 321 - Standard Test Method for Bond Strength of Chemical Resistant Mortars.
3. C 348 - Standard Test Method for Flexural Strength of Hydraulic Cement Mortars.

B. Corps of Engineers (COE):

1. COE CRD-C 48 - Method of Test for Water Permeability of Concrete.

1.3 SUBMITTALS

A. General:

1. Manufacturer's certification that proposed materials, details and systems as indicated and specified fully comply with manufacturer's details and Specifications.
2. If any portion of the Contract Documents does not conform to manufacturer's standard recommendations, submit notification of portions of design that are at variance with manufacturer's Specifications.

B. Product Data:

1. Manufacturer's descriptive literature and product Specifications for each product.
2. Laboratory tests or data that validate product compliance with the performance criteria specified.

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications:

1. Company specializing in manufacturing Products specified in this Section with minimum 10 years documented experience.

B. Installer Qualifications:

1. Acceptable to manufacturer with documented experience on at least five projects of similar nature in past five years and training provided by the product manufacturer.

1.5 DELIVERY, STORAGE AND HANDLING

A. Deliver and store in a dry area between 40°F (5°C) and 90°F (32°C). Handle and protect from freezing and direct sun light in accordance with manufacturer's instructions.

B. Deliver materials in manufacturer's unopened containers, fully identified with brand, type, grade, class and all other qualifying information. Provide Material Safety Data Sheets for each product.

C. Take necessary precautions to keep products clean, dry and free of damage.

1.6 SYSTEM REQUIREMENTS

A. Coordinate installation work with work of other trades.

B. Provide materials and accessories in timely manner so as not to delay the Work.

1.7 PROJECT CONDITIONS

A. Maintain surfaces to be coated and surrounding air temperature at not less than 40°F (5°C) for at least 48 hours before, during and after application of waterproofing.

B. Do not apply materials to frozen or frost-filled surfaces.

C. Exercise caution when temperatures exceed 90°F (32°C) due to rapid set times.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Approved Manufacturers: AQUAFIN, Inc. P.O. Box 1440, Columbia, MD 21044, (410) 964-1410 (410) 964-1526 (FAX), no substitutes.

2.2 MATERIALS

A. Waterproofing Material - Acrylic Modified Cement Waterproofing: Cementitious, two-component, acrylic emulsion based, highly-flexible, crack-bridging waterproof membrane barrier, AQUAFIN-2K/M.

2.3 ACCESSORY MATERIALS

A. Patching Compound: Ready-mixed, non-polymer, cementitious waterproofing and repair mortar recommended by waterproofing manufacturer for patching, honeycombs, seal strips (coves, reglets), etc.

1. Product: UNI MORTAR 1ZSR.
2. Color: Gray
3. Aggregate: Powder
4. Compressive Strength: (ASTM C-107) 600 psi (28 days)
5. Flexural Strength: (ASTM C-34) 700 psi (28 days)

B. Expansion joint and crack sealing tape: Elastomeric, tear resistant, breathable waterproofing tape.

1. Product: AQUAFIN JOINT SEALING TAPE-2000 or 2000 S
2. Width: 4 3/4 inches or 8 inches
3. Elongation: 600%
4. Tear resistance: 725 psi

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine substrates and adjoining construction, and conditions under which Work is to be installed.

B. Do not proceed with Work until unsatisfactory conditions are corrected and surfaces properly prepared.

3.2 PREPARATION

A. Protect adjacent surfaces not designated to receive waterproofing.

B. Substrate preparation:

1. New Construction:
   a. Remove contaminants, such as oil, grease, dirt, loose particles, remains of form oils, water repellents, rust or other coatings, by high-pressure water blasting (>3000 psi), wet or dry sand blasting, or other mechanical means to produce surfaces suitable for application of membrane.
   b. Surface must be clean and sound

c. The surface may be damp but shall be free of standing water and any contaminants.
d. Surface shall have an “open textured” appearing finish.

2. Existing Construction:
a. Remove surface deposits and rust by high-pressure water blasting (>3000 psi), wet or dry sand blasting, or other mechanical means to produce surfaces suitable for application of membrane.
b. Protect any existing sealant in the joint and the wall concrete outside of the extent of the sealing strip during this process to prevent loss of the sealant and concrete surface. Material, such as steel, shall be used to delineate the surface to be blasted.
c. Surface must be clean and sound
d. The surface may be damp but shall be free of standing water and any contaminants. Use fans or other means to dissipate excess condensation and moisture on the wall.
e. Surface shall have an “open textured” appearing finish.

C. Rinse surfaces to be waterproofed with clean water to saturated surface dry (SSD) condition, with no standing water on horizontal surfaces.

D. Fill concrete bug holes less than 1/4 inch in width and 1/8-inch in depth with a scratch coat of Aquafin-2K/M. Fill larger / deeper holes with a patching mortar. See SECTION 03 66 00.

3.3 INSTALLATION

A. Mix waterproofing material in proportions recommended by manufacturer.

B. Apply waterproofing material in quantities in accordance with manufacturer's Specifications and recommendations.

1. Apply 1st coat of cement at 1/16-inch (60 mils) thickness. Extend coat ¾-inch beyond width of tape. The edge shall be neat and straight. Use a “bond breaker” to make a neat straight line.
2. Embed elastomeric tape uniformly, leaving no wrinkles, into first coat of cement, using a steel trowel.
3. Apply 2nd coat at 1/32-inch (30 mils) thickness over the elastomeric tape as soon as the 1st coat has sufficiently hardened or wait until next day.
4. Apply cement using stainless steel trowel.
5. One “splice” is permitted in the tape per joint. Lap tape a minimum of eight inches.

3.4 CURING

A. Follow manufacturer's general instructions for curing and hardening of waterproofing material.

3.5 ACCEPTANCE

A. Remove left over materials and any foreign material resulting from the work from the site.

B. Clean adjacent surfaces and materials.

END OF SECTION

SECTION 03 15 20
EXPANSION-JOINT FILLER

PART 1 GENERAL

1.1 WORK INCLUDED

A. The Work consists of furnishing and installing closed cell foam expansion and control-joint filler in sidewalks, driveways, channels, canals, between adjacent constructions (walls and floating membrane slabs) and pipe penetrations through slabs and walls in accordance with these Specifications and in conformity with the Drawings.

1.2 QUALITY STANDARDS

A. American Society for Testing and Materials (ASTM):

1. D 3575 - Test Methods for Flexible Cellular Materials made from Olefin Polymers
2. C 177 - Test for Steady State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus.

1.3 DELIVERY, STORAGE AND HANDLING

A. Deliver the materials to the project site in the manufacturer's containers with all labels intact and legible at the time of use.

B. Materials shall be stored in a secure, indoor, dry area.

C. Maintain the filler in a dry condition during delivery, storage, handling and installation.

1.4 SUBMITTALS

A. Manufacturer's data sheet and installation instructions.

B. Tape.

PART 2 PRODUCTS

2.1 PHYSICAL PROPERTIES

PHYSICAL PROPERTY	ASTM TEST METHOD	VALUE
Color		Charcoal
Thickness	ASTM D 3575	0.500"
Cell Structure		Closed
Density (PCF)	ASTM D 3575 Test C	2.0

PHYSICAL PROPERTY	ASTM TEST METHOD	VALUE
Compressive strength (psi) 25% deflection 50% deflection	ASTM D 3575 Test B	 4.19 10.48
Compressive set	ASTM D 3575 Test A	< 10%
Tensile Strength (psi)	ASTM D 3575 Test E	60.46 (Machine direction) 30.20 (Cross machine direction)
Tear Strength (lbs./in.)	ASTM D 3575 Test D	14.5 (Machine direction) 11.5 (Cross machine direction)
Thermal Conductivity	ASTM C 177 & C 518	0.3 BTU/HR/FT^2
Water absorption	PPP-C 1752 B	0.01%
Temp. resistance		-65° F to + 170° F
Thermal stability	ASTM D 3575	-1.0 % average
R-value		3.0

2.2 ACCEPTABLE MANUFACTURER

A. Sonneborn polyethylene closed-cell expansion-joint filler.

PART 3 EXECUTION

3.1 GENERAL

A. Examine the concrete surfaces and correct any surface imperfections that will prevent proper installation and performance of the filler.

B. Expansion joint filler for each joint shall be furnished in a single piece for the full depth and thickness required for the joint.

C. Joints in the length of the filler shall be made by butting two pieces together and fastening securely with tape.

D. The filler shall be secured in place to prevent displacement during and after concrete placement.

E. Filler that is torn or irregular in any manner shall not be used.

F. Tape the joint of multiple layers of filler, e.g., two 1-inch layers for a two-inch wide joint, to prevent the intrusion of concrete between the two layers of filler.

3.2 FILLER THICKNESS

A. Install the expansion joint filler as recommended by the manufacturer using the thickness of filler (1/4 inch, 3/8 inch, 1/2 inch, 3/4 inch, or one inch) shown in the Drawings.

END OF SECTION

SECTION 03 21 00
REINFORCING STEEL

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Reinforcing steel.
2. Steel fabric reinforcement.
3. Supports for reinforcement

1.2 REFERENCES

A. American Concrete Institute (ACI):

1. 117 - Standard Specification Tolerances for Concrete Construction and Materials.
2. 315 - Details and Detailing of Concrete Reinforcement.

B. American Society for Testing and Materials International (ASTM):

1. A 493 – Specification for Stainless Steel Wire and Wire Rods for Cold Heading and Cold Forging
2. A 510 – Specification for General Requirements for Wire Rods and Coarse Round Wire
3. A 615/A 615M - Standard Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement
4. A 706/A 706M - Standard Specification for Low-Alloy Steel Deformed and Plain Bars for Reinforcement (reinforcement for welding)
5. A 775/A 775M - Standard Specification for Epoxy-coated Reinforcing Steel Bars.

C. Concrete Reinforcing Steel Institute (CRSI):

1. Manual of Standard Practice
2. Placing Reinforcing Bars
3. ANSI / CRSI – RB4.1 – CRSI Standard for Supports for Reinforcement Used in Concrete

D. American Welding Society (AWS):

1. D1.4 - Structural Welding Code - Reinforcing Steel.

1.3 SUBMITTALS

A. Submittals for Review:

1. Shop drawings:

a. Detail plans, sections, reinforcing bar sizes, grades, placement, spacing, splice lengths, tail and hook configurations, chair and bolster heights and development length where applicable.
b. Mechanical threaded splice devices.

2. Samples:
a. Tie Wire.
b. Reinforcing bar support chairs and bolsters.

B. Quality Control Submittals:

1. Mill test reports.
2. Epoxy coating certifications, Certificate of Compliance.
3. Mechanical thread connections:
a. Manufacturer's data sheets.
b. Verification that device threads have been checked and meet manufacturer's requirements for thread quality.
4. Welding qualification.
5. Test results for field welding.

1.4 DELIVERY, STORAGE AND HANDLING

A. Reinforcing steel:

1. Store off ground.
2. Protect from oil or other materials detrimental to steel or bonding capability of reinforcing bar.
3. Protect from mechanical injury.
4. Rust, seams, surface irregularities, or mill scale, will not be cause for rejection provided that weight and height of deformations of hand-wire-brushed test specimen are not less than applicable ASTM Specification.

B. Epoxy coated reinforcing bars:

1. Store on protective cribbing.
2. Protect from mechanical injury and deterioration caused by exposure.
3. Use padded or non-metallic slings and padded straps when handling.

C. Do not drop or drag bars.

1.5 QUALIFICATIONS

A. Welding:

1. Performed by welders and welding procedures certified to requirements of AWS D1.4.
2. When welder or welding procedures certification tests are required, testing shall be performed by independent testing agency accepted by ENGINEER.

PART 2 PRODUCTS

2.1 REINFORCING STEEL

A. Bar steel reinforcement: Deformed type, ASTM A 615, grade 60.

B. Spirals:

1. Spirals, [hot-rolled plain or deformed bars per ASTM A 615, Grade 60.
2. Spirals for columns: Provide two “spacers” with section modulus greater than 0.008 cubic inches in order to maintain proper pitch and spacing.

C. Welded Wire Fabric:

1. Plain welded wire fabric per ASTM A 185 or deformed welded wire fabric per ASTM A 497 with wire size and spacing as specified in Drawings.
2. Furnish in sheet stock; roll stock is unacceptable.

D. Epoxy-coated Reinforcing Bars:

1. Conform to ASTM A 775.
2. When required, damaged epoxy coating shall be repaired with patching material conforming to ASTM A 775 in accordance with material manufacturer's recommendations.

E. Horizontal Masonry Joint Reinforcement: Conform to ASTM A 82.

2.2 IDENTIFICATION

A. Bundles of reinforcing bars and wire spirals:

1. Tag with a metal tag.
2. Show specification, grade, size, quantity and suitable identification to permit checking, sorting and placing.
3. When bar marks are used to identify reinforcing bars in Drawings, show bar mark on tag.
4. Remove tags prior to concrete placement.

B. Tag bundles of flat sheets of welded wire fabric similar to reinforcing bars.

2.3 SUPPORTS FOR REINFORCEMENT

A. General:

1. Supports shall be spaced in accordance with CRSI Manual of Standard Practice, Chapter 3; maximum of four feet or as required by Drawings.
2. CRSI Corrosion resistance Classification shall be as follows

a. Class 1 – for use in moderate to severe exposure, such as water retaining structure walls,, columns and roof slabs, and/or situations requiring grinding or sandblasting of the concrete surface

b. Class 1A – for use with epoxy-coated reinforcing steel and in situations of moderate to maximum exposure where no grinding or sandblasting of the concrete surface is required

c. Class 2, 2A and 2B – for use in situations or moderate exposure and situations requiring light grinding or sandblasting. Class 2 reinforcement supports shall not be subjected to severe conditions of exposure to sea water or an atmosphere containing highly corrosive chemicals

d. Class 3 – no protection against corrosion and used where concrete surface blemishes can be tolerated and where the reinforcement support does not come in contact with the exposed concrete surface

B. Support Types – See Tables 1, 2, and 3 in CRSI – RB4.1

1. Class 1 Types SB, BB, JC, HC, BC, CHC shall be coated with plastic having a thickness of 3/32-inch or greater at points of contact with the formwork. The plastic shall extend upward on the wire to a point 1/2-inch above the formwork
2. Class 1A reinforcing supports shall be epoxy coated, vinyl coated or plastic coated. Types include SB, BB, JC, HC, BC and CHC. A minimum 5-Mil thickness of coating is required. The coating shall be applied using electrostatic spray or fluidized bed techniques
3. Class 2 Types SB, BB, JC, BC, and CHC with a ASTM A 493 stainless steel tip welded to the bottom of each leg. For Class 2A reinforcing supports no portion of the non-stainless steel wire shall be closer than 1/4-inch from the form surface.
4. For Class 2B supports, non-stainless steel wire of the support shall extend no closer than 3/4-inch from the form surface. Leg extensions shall be at least of the same gauge as the wire to which they are welded.

   Class 2B supports shall have a minimum 5-mil coating that shall be applied using electrostatic spray or fluidized bed techniques. Prior the coating the wire shall be cleaned to ensure coating adhesion and bond.
5. Class 3 supports have no special requirements for corrosion resistance. Support types include SB, BB, and CHC designated by the suffix “P,” SBP, BBP, or CHCP shall be provided with earth bearing bases of sheet metal having sufficient gauge and bearing area. Earth bearing bases apply to Class 3 supports only.

   Support Types SB, BB, and CHC designated by the suffix “U”, SBU, BBU, and CHCU shall be provided with horizontal runner wires, allowing the bar support to rest on a lower mat of reinforcement. Supports with horizontal runner wires are usually limited to Class 3 supports only. The minimum diameter of the horizontal runner wires shall be the same diameter as the top wires
6. Cementitious supports – not permitted
7. Plastic Supports – Not permitted except in columns

C. Floor Slabs:

1. Class 3 steel chairs or bolster support
2. Composite chairs are unacceptable.
3. When required, staple chair on bearing pad:
   a. 1/4-inch thick exterior grade plywood approximately five inches square.

D. Soffits:

1. Steel wire bar supports where soffits are exposed to view or are painted: Class 1 or Class 2, Types A or B.
2. Steel wire bar supports where soffits are not exposed to view and not painted: Class 3 is acceptable.

E. Water and Wastewater Vaults, Water Storage Tank and Basin Walls, Columns and Roof Slabs:

1. Walls and roof slabs: Use Class 2 and 2B supports, types SB, BB, JC, HC, BC, and CHC. A tip of stainless steel meeting ASTM A 493, AISI Type 430 shall be welded to the bottom of each leg. For Class 2A supports, no portion of the non-stainless steel wire shall be closer than ¼ inch from the form surface
2. Securely staple supports to formwork. Use SS staples.

F. Circular Columns:

1. Plastic CRSI Type WS "space wheels" manufactured by Aztec (Model DO 12/40).
2. Provide BBU bolsters at top of column.

G. Epoxy-coated and Zinc-coated Bar Supports:

1. Support epoxy-coated reinforcing bars supported from formwork on coated wire bar made of dielectric or other acceptable materials.
2. Wire supports shall be fully coated with dielectric material, compatible with concrete.
3. Reinforcing bars used as support bars shall be epoxy-coated.
4. In walls reinforced with epoxy-coated bars, spreader bars shall be epoxy-coated.
5. Proprietary combination bar clips and spreaders used in walls with epoxy-coated reinforcing shall be made of corrosion-resistant material or coated with dielectric material.

H. Performance Requirements

1. Each support complying with this specification shall meet minimum criteria according to test results described in CRSI – RB4.1, including loads test, impact test, and concrete consolidation test

2. Supports used in tank monolithically placed tank slab wall footing zone shall meet or exceed Load Category 800
3. Supports used for reinforcing steel and prestressing steel strand in tank roof slabs shall meet or exceed Load Category 600.
4. Supports used at the bottom of walls under vertical reinforcing steel shall meet or exceed Load Category 800.

2.4 MECHANICAL BAR SPLICES

A. Approved mechanical threaded butt connectors may be used in lieu of lapped splices when approved.

B. Mechanical connection: Capable of developing minimum of 125% of yield strength of reinforcing bar in both tension and compression.

C. Coat parts of mechanical connections used on coated bars, including steel splice sleeves, bolts, and nuts with same material used for repair of coating damage.

D. Manufacturers and Products:

1. Erico Products, Inc., Cleveland, Ohio; Lenton Reinforcing Steel Couplers.
2. Richmond Screw Anchor Co., Inc., Fort Worth, Texas; Richmond DB-SAE Dowel Bar Splicers.

PART 3 EXECUTION

3.1 FABRICATION

A. Fabrication tolerances for straight and bent bars: In accordance with requirements of Subsection 4.3, Tolerance, of American Concrete Institute Standard 315 and CRSI Manual of Standard Practice.

3.2 BENDING

A. All reinforcing bars shall be bent cold to shapes shown on Drawings, and unless otherwise approved, bends shall conform to requirements of ACI 315. All bending dimensions shall be out to out of bar.

B. Bars partially embedded in concrete shall not be field bent except as shown on Drawings.

C. Bars shall not be bent or straightened in a manner that will injure material.

D. Spirals:

1. One and one-half finishing bends are required at top and bottom of spiral.
2. Provide spacers in accordance with Chapter 5, Section 9 of CRSI Manual of Standard Practice.
3. Welding as aid to fabrication and/or installation is not permitted.

3.3 PLACING AND FASTENING

A. Place, fasten, splice and support reinforcing steel and wire mesh or bar mat reinforcement in accordance with Drawings and CRSI Recommended Practice for Placing Reinforcing Bars.

B. Place reinforcement within tolerances provided in ACI 117.

C. When placed in the work, the reinforcing bars shall be free from dirt, loose mill scale, paint, oil, loose rust or other foreign substance.

D. Accurately place steel reinforcement in positions shown on Drawings and hold firmly during placing and setting of concrete by means of spacer strips, stays, metal chairs or other approved devices or supports.

1. Precast concrete bricks or other types of bricks are not permitted for support of reinforcement in footings, slabs or any other part of Work.
2. Space chair and bolster supports for slabs and walls at maximum four-foot centers unless otherwise shown in Drawings.
3. Unless otherwise provided, use bar steel reinforcement to support top layers of reinforcing.
4. After form removal, clip staple tails from staples used to attach bar supports to wall and roof form.
5. Columns:
    a. At top three feet of column, place three BBU bolsters spaced at 120 degrees.
    b. For remaining column height, place three wheels, spaced 120 degrees apart, every four feet of column height.
    c. Increase column spiral pitch if conflict occurs with wheel.
    d. Lower pre-tied column reinforcing steel lowered into column forms vertically to prevent damage to space wheels.
6. Provide one row of continuous bar chairs for support under each row of bar splices.

E. Tie bars securely at intersections, except where spacing is less than one foot in each direction, when alternate intersections shall be tied.

1. Tying of steel by spot welding is not permitted.
2. Bend tie wire to prevent tie wire from being closer than one inch from surface of concrete.
3. Ties for use with coated reinforcement: Approved plastic coated wire.
4. Bundle bars: Tie together at maximum six-foot centers.

F. Adjust or relocate reinforcement used in post-tensioned concrete during installation of prestressing ducts or tendons to provide location and planned clearances to prestressing tendons, anchorages, jacks and equipment as approved.

G. Use snap or single ties unless tie fails to securely hold reinforcing steel. If tie fails, saddle or U tie as shown in Figure 1 at no additional expense to OWNER.

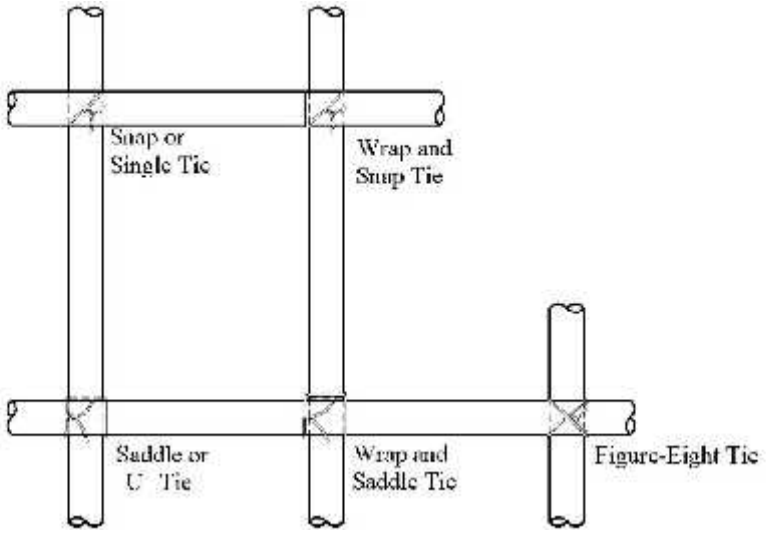

FIGURE 1

3.4 SPLICING

A. Bar steel reinforcement shall be furnished in full lengths indicated on Drawings.

B. Splicing of bars, except where shown on Drawings, will not be permitted without written acceptance.

C. Stagger splices at minimum distance required for lapped splice in bar.

D. When permission is granted to splice bars, other than those shown on Drawings, provide additional material required for lap at no additional expense to OWNER.

E. Splices will not be permitted at points where section is not sufficient to provide minimum distance of 2 inches between splice and nearest adjacent bar or surface of concrete.

F. Sheets of mesh or bar steel reinforcement shall overlap each other sufficiently to maintain uniform strength and securely fasten at ends and edges. Minimum edge lap: one mesh in width.

G. Welding of reinforcement shall be done only if detailed on the Drawings or if authorized by the ENGINEER in writing.

1. Bars to be welded shall meet either ASTM A 706 marked “W” or ASTM A 615/ASTM A 706 marked “S” and “W”.
2. All welded splices shall be direct butt splices.
3. Welding shall be performed in accordance with AWS D 1.4.
4. After completion of welding, coating damage to any epoxy-coated reinforcing steel bars shall be repaired.
5. Test 4% of the total number of splices per each bar size, but not less than four splices, by radiographic methods.

H. When required or permitted in writing by the ENGINEER, a mechanical connection may be used to splice reinforcing steel bars or as substitution for dowel bars.

I. All splices of lap reinforcement shall be full-contact splices.

3.5 CUTTING

A. When coated reinforcing bars are cut in the field, the ends of the bars shall be coated with the same material used for repair of coating damage.

3.6 PREPARATION

A. The placing and securing of the reinforcement in any unit or section shall be accepted by the ENGINEER before any concrete is placed in any such unit or section.

3.7 REINFORCING STEEL PLACEMENT REVIEW

A. A minimum of 24 hours prior to concrete placement a final review of reinforcing steel placement for footings, slabs, columns, and walls of structures, will be performed by the ENGINEER.

B. Perform a quality control review prior to the ENGINEER’s final review to determine the acceptability, completeness and clean-up of any sub-contractors work and overall readiness of the Work for the final review.

C. If the CONTRACTOR has proceeded to place forms prior to the final review, the CONTRACTOR will be required to remove sufficient forms to permit the visual review of the reinforcing steel and appurtenances such as reinforcing steel supports and chairs and ties at no cost to the OWNER.

END OF SECTION

SECTION 03 23 10
POST-TENSIONING STEEL

PART 1 GENERAL

1.1 WORK INCLUDED

A. This Section of the Specifications will govern furnishing, installing and stressing of post-tensioning bars and strands. All incidental and appurtenant operations involving post-tensioning bars and strands shall be done in strict conformance with the Drawings and other terms and conditions of the Contract. All standard Specifications made a portion of this Specification by reference shall be the latest edition and revision thereof. Tendon systems shall be furnished as shown on the Drawings. The ENGINEER shall be given 24 hours notice prior to stressing of any tendon. The ENGINEER shall be present during stressing operations.

B. In consideration of the unique nature of post-tensioned concrete construction, coordination between placement of both post-tension and plain reinforcement and the requirements for proper structure performance the following are requirements to be met.

1. The CONTRACTOR/Subcontractor that supplies the post-tensioning steel and anchorages shall be required to superintend and place both the post-tensioning and plain reinforcing construction.
2. The superintendent shall be on the project full-time during all placing and stressing operations.

C. For PT concrete tendon testing see 03 23 40

D. For grouting of bonded tendons see SECTION 03 23 50.

E. For grouting PT concrete anchorage pockets see SECTION 03 67 00.

1.2 QUALITY STANDARDS

A. American Concrete Institute (ACI):

1. ACI 318 - Building Code Requirements for Reinforced Concrete
2. ACI 117 - Standard Tolerance for Concrete Construction and Materials
3. ACI 301 - Specifications for Structural Concrete for Buildings
4. Referenced Specifications for Unbonded Single Strand Tendons – 1998 Draft report

B. American Society for Testing and Materials:

1. C 150 - Portland Cement
2. A 416 - Uncoated Seven-Wire Stress-Relieved Steel Strand for Prestressed Concrete
3. A 416 - Supplement I. Low-Relaxation Strand

C. Post Tensioning Institute (PTI):

1. Post-Tensioning Manual
2. Field Procedures Manual for Unbonded Single Strand Tendons
3. Acceptance Standards for Post-Tensioning Systems
4. Specification for Unbonded Single Strand Tendons
5. Design and Construction of Post-Tensioned Slabs-on-Ground

D. California Department of Transportation (CALTRANS):

1. CALTRANS Standard Specification, Section 50

E. American Association of Highway and Transportation Officials (AASHTO):

1. AASHTO Division II – Construction Section 10, Prestressing

1.3 SUBMITTALS

A. Shop Drawings conforming to the requirements of the Contract Documents.

B. Certifications for verification of manufacture and fabrication of strand by a PTI certified plant.

C. Mill test reports for reinforcing and post-tensioning steels.

D. Superintendent qualifications per Paragraph 1.1.A. of this Specification.

E. Sheathing Repair Tape.

F. Wedge Properties.

G. Elongations.

H. Friction Test Results.

I. Certified Gage Calibration.

1.4 DELIVERY, STORAGE AND HANDLING

A. General:

1. Both prestressing steel for bonded systems and strands for unbonded tendon systems shall be stored on pallets to prevent direct contact with the ground to prevent encrustation with mud, grease or other matter detrimental to the post-tension strand or sheath.
2. All anchorages and prestressing steel components such as wedges shall be stored in a secure, dry area.

B. Prestressing Steel for Bonded Systems:

1. All prestressing steel shall be protected against physical damage and corrosion at all times, from manufacture to grouting. Prestressing steel that has sustained physical damage shall be rejected.
2. Prestressing steel shall be packaged in CALWRAP containers or shipping forms for protection of the steel from corrosion. A corrosion inhibitor that prevents rust or other results of corrosion, shall be placed in the package or form, or shall be incorporated in a corrosion inhibitor carrier type packaging material.
3. Packaging or forms damaged from any cause shall be immediately replaced or restored to provide protection to the steel.

C. Unbonded Tendon Systems:

1. Extruded plastic encapsulated prestressing steel strand (unbonded tendon) shall be handled to eliminate the possibility of tears, rips and holes in the sheath. Excessive (as determined by the ENGINEER) tears of the sheath shall be cause for rejection of the tendon.
2. Packaging or forms used in the transport and placement of the duct shall be rejected along with the tendon, if excessive tears occur.
3. Excessive tears are defined as more than a total of 6, 3-inch or longer splits, or equivalent summation of tear lengths, per 100 linear feet of tendon sheath.
4. The sheathing shall provide a smooth circular outside surface and shall not visibly reveal the lay of the strand. Strand that does not meet these criteria shall be replaced with strand meeting this Specification.
5. Splices in the sheath to repair 6, 3-inch or longer, tears in 100 linear feet are unacceptable. Splices are acceptable when the tendon sheath tears are less in total length than the acceptance criteria.
    a. A tear is defined as split in the sheath that exposes the strand.
    b. An abrasion or nick in the sheath that does not expose the strand is not a tear and not subject to these acceptance criteria.

1.5 STRESSING EQUIPMENT

A. All jacks used to stress the tendons shall be accompanied by a dated and certified calibration sheet correlating jacking pressure to tendon force. All gages shall have an accuracy of reading within 2% and shall be equipped with a gage dial of detail and size that the gage can be read to the nearest 225 pounds of prestressing force.

B. Gages shall be re-calibrated at intervals of no more than one year by an independent laboratory; however, if the gage system appears to be giving erratic results, or if gage indication and elongation measurements indicate materially different stresses, the jack and the gages shall be re-calibrated. The post-tensioning steel CONTRACTOR shall load-cell test stressing equipment on-site to demonstrate to the ENGINEER that the equipment is calibrated.

1.6 CONSTRUCTION REVIEW

A. The ENGINEER shall be present during jack calibration, friction testing, stressing and grouting of all tendons. It is the responsibility of the CONTRACTOR to notify and provide a minimum of 24 hours notice to the ENGINEER of these activities. If any calibration, stressing or grouting operation is performed without the ENGINEER's presence the work will be deemed unacceptable and non-conforming to these Specifications.

B. If the ENGINEER determines that construction review of an activity is unnecessary, he will provide written direction to the CONTRACTOR to proceed with that particular activity without his construction review.

PART 2 MATERIALS

2.1 GENERAL

A. All post-tensioning steel strand shall be manufactured by a PTI-certified plant.

2.2 ANCHORAGE BEARING PLATES

A. Anchorage bearing plates shall meet the design criteria of PTI Acceptance Standards for Post-Tensioning Systems.

2.3 ANCHORAGE WEDGE PLATES

A. Anchorage wedge plates shall meet the design criteria of PTI Acceptance Standards for Post-Tensioning Systems.

2.4 WEDGES

A. Each type of wedge shall meet the performance requirements of the PTI Acceptance Standards for Post-Tensioning Systems. Wedges shall have an angle of 5° to 7° and a length of at least 2.5 times the nominal strand diameter. The wedge shall be manufactured from low carbon steel (AISI 12-L14 or 11-L17) or alloy steel (AISI 86L20), which are suitable for case hardening while maintaining a ductile core. After machining, the wedge shall be casehardened to at least 58 HRC measured at 1/3 case depth (or equivalent hardness scale) while maintaining a ductile core hardness less than 46 HRC. Wedges shall not break into separate pieces. Surface cracks are permitted.

B. Strand-Wedge Connect Performance Requirements:

1. Securely anchor the strand without significantly reducing MUTS and ductility of the strand or tendon.
2. Avoid strand slip after anchoring
3. Prevent breaking of individual strand wires in the wedges during stressing
4. Achieve dynamic fatigue and impact loading resistance without strand slippage or wire breakage.

C. Strand Wedge Connection Efficiency:

1. 95% as required by AASHTO, Section II – 10.3.2.

2.5 UNCOATED STRAND

A. Strand shall be low relaxation, uncoated, seven wire strand, having a guaranteed minimum ultimate tensile strength of 250,000 or 270,000 psi as shown on the Drawings.

B. Strand shall conform to ASTM Designation A 416, Table 1, Supplement 1, Low Relaxation strand.

2.6 BONDED TENDONS

A. Anchorages:

1. The anchorages shall develop at least 90% of the minimum ultimate tensile strength (MUTS) of the prestressing steel, tested in an unbonded state without exceeding anticipated set. The anchorage shall be so arranged that the prestressing force of the tendon may be verified prior to removal of the stressing equipment.

B. Sheathing Material:

1. Duct may be round, oval or flat. It may be uncoated, galvanized, coated metal or plastic. Duct shall comply with the PTI Acceptance Standards for Post-Tensioning Systems. Sheathing material for bonded tendons shall be strong enough to retain its shape and resist un-repairable damage during construction. It shall prevent the entrance of cement paste from the concrete. Material left in place shall not cause harmful electrolytic action nor deteriorate. The inside cross-sectional area of the sheathing shall be at least two times the net area of the prestressing steel. Sheathing shall be capable of transmitting forces from grout to the surrounding concrete. Duct shall be furnished as shown in the Drawings.
2. Ducts for water storage tanks shall be manufactured from HDPE or PVC materials.

C. Formed Ducts:

1. Ducts formed by sheath left in place should be of a type that will not permit the entrance of cement paste. They should transfer bond stresses as required and should retain shape under the weight of the concrete.
2. Plastic ducts shall be made of high-density polyethylene (HDPE) according to ASTM D 3350 cell classification 324420C to 445534C, or polyethylene conforming to ASTM D 1784, cell classification range 12344-B to 13466-B, with a specific gravity of 1.4. The corrugation of ducts shall be annular: spiral corrugations are unacceptable. The wall thickness of the duct, a minimum of 0.050 ± 0.010 inches, shall be such that wearing through the

wall of the duct by the strand during stressing is avoided. This requirement shall be met at an eight-foot minimum radius of curvature with a total strand movement of 3-feet with the tendon stress to 0.80 of MUTS. The minimum remaining wall thickness of the duct after testing shall be at least 0.040 inches. Ducts shall be coupled in a manner that is leak tight without the use of tape. Ducts may be welded in lieu of couplers when approved by the ENGINEER. Ducts shall be capable of transferring 40% of the specified strength of the tendon within a length not exceeding 45 duct diameters. Irreversible deformations of duct cross-sectional dimensions under a point load, a #4 reinforcement bar bearing on the duct, shall not exceed 1/4 inch, nor 5% of the duct cross-sectional dimension, whichever is larger, one minute after removal of the load at 70°F ambient temperature. Polyethylene duct shall not be used when the radius of curvature of the tendon is less than 30 feet.

D. Couplings:

1. Couplings of bonded tendons shall be used only at locations specifically indicated and/or accepted by the ENGINEER. Couplings shall not be used at points of sharp tendon curvature. All couplings shall develop at least 95% of the MUTS of the prestressing steel without exceeding anticipated set.
2. The coupling of tendons shall not reduce the elongation at rupture below the requirements of the tendon itself. Couplings and/or coupling components shall be enclosed in housings long enough to permit the necessary movements, and fittings shall be provided to allow complete grouting of all the coupling components.

E. Multiple Tendons:

1. Tendons composed of multiple strands or bars in a common sheath should be tensioned simultaneously unless the effects of interferences between the elements are considered.

2.7 UNBONDED TENDONS

A. Anchorages:

1. The anchorages of unbonded tendons shall develop at least 95% of the MUTS.
2. The anchorage shall be capped at the wedge cavity with a threaded watertight cap. The cap shall be filled with grease.
3. All dead end anchorage assemblies shall be plant-installed.

B. Sheathing:

1. The sheathing for unbonded tendons shall have tensile strength and water-resistance to resist un-repairable damage and deterioration during transport, storage at jobsite, and installation. The sheathing shall

prevent the intrusion of cement paste and the escape of coating material. The sheathing shall be of virgin high-density polyethylene (HDPE) or polypropylene (HDPP) and shall be produced by a seamless extrusion process over corrosion preventative grease that leaves no air pockets and has at least a 60-mil thickness with no negative tolerance.

2. Damage in the sheathing shall be repaired by re-sheathing prior to concrete placement. See this Section for acceptance criteria.
3. The encapsulated sheathing shall connect to and be tied to the anchorage with a watertight plastic trumpet filled with corrosion preventative grease.
4. The trumpet shall have a threaded end to screw onto the threaded anchorage. It shall conform to the PTI Specification for Unbonded Single Strand Tendons for tendons in a corrosive environment.

C. Sheathing Repair Tape:

1. Scotch Brand No. 838 “Tedlar” Plastic Film Tape manufactured by the 3M Corporation, shall be used to repair holes and tears in extruded sheathing.
2. The tape is available from Lane Supply Company, 2050 W. Barberry Place, Denver, CO 80204 telephone (303) 534-5371.

2.8 CHAIRS, BOLSTERS AND TIE WIRE

A. 16-gauge wire ties, manufactured by American Wire Tie, Inc., or Mar-Mac Wire Inc.

B. When epoxy coated reinforcing steel is shown in the Drawings, PVC coated wire ties shall be used. The minimum PVC coating is 0.7 mils.

C. Tie wire that will be in contact with the inside face of water storage tank walls, roof slab and columns shall be 16-gauge stainless steel.

D. Bar chairs and bolsters shall conform to the requirements in SECTION 03 21 00, Article 2.3 – SUPPORT FOR REINFORCEMENT. Any chair or bolster in contact with an inside concrete surface shall be stainless steel tipped the same as the requirements for reinforcing steel.

PART 3 EXECUTION

3.1 GENERAL

A. A stressing sequence shall be used that will result in no adverse stress conditions to the structure. The tensioning process shall be conducted so that the tension being applied and the elongation produced may be readily measured. Strand shall be marked with a saw to facilitate elongation measurement. Keel or crayon is unacceptable for marking of strand.

B. Ducts shall be plugged at the anchorages during construction to prevent the entry of debris and water. This includes both prefabricated and empty ducts and prior to and after stressing but before grouting. In temperatures below 32°F, ducts shall be kept completely free of water to avoid damage to the duct or concrete due to freezing.

C. All wall tendon grouting and vent ports shall be exposed, open and clear prior to installing strand.

D. Wall tendon grouting shall be performed from a single low point tendon port. Grouting shall be performed continuously from one port and direction.

3.2 TENDON PLACEMENT

A. Forms:

1. Forms shall be properly braced to maintain alignment.
2. See SECTION 03 11 13.

B. Anchorages and Pocket Formers:

1. Anchorages shall be secured to form work with bolts, nails or threaded pocket former fittings to remain in a fixed position during concreting.
2. Pocket formers shall positively preclude intrusion of concrete or cement paste into the wedge cavity during concrete placement.

C. Placement Tolerance:

1. Dimensions for vertical location of tendons shall not vary more than 1/8-inch in members up to 12 inches deep.
2. Horizontal deviation may be allowed but radius of curvature shall not be less than 21 feet.
3. Mild steel reinforcing shall be coordinated with tendon placement. Proper tendon location has priority over all other materials.

D. Supports:

1. See 03 21 00 for support requirements
2. Supports for tendons shall insure position during concreting. No. 5 reinforcing steel or “BBU” style bolsters shall be used to support tendons. When No. 5 reinforcing steel is used it shall be supported by chairs spaced at no more than 2-feet on center. Bolsters and reinforcing steel used to support tendons shall be located as shown on the Drawings.
3. Dimensions for vertical location of tendons shall not vary more than 1/8-inch in slabs and 1/4-inch in beams. Horizontal deviation may be allowed but radius of curvature should not be less than 21 feet. Mild steel reinforcing shall be coordinated with tendons. Proper tendon location has priority.

4. Supports shall be non-corrosive if in contact with concrete formwork and be placed at high and low points of profile and control points.

E. Repairs to Unbonded Tendon Sheathing:

1. Damaged areas in the 60-mil sheathing, such as rips and tears, shall be repaired at least four hours prior to placing concrete with sheathing repair tape. This time period is required to permit the ENGINEER to review all repaired sheathing.
2. All grease shall be thoroughly removed from the sheathing prior to taping the repair area. Two layers of tape shall be spirally wound around the damaged area in the sheathing. Each winding of a layer shall overlap the previous winding 50%. The tape shall extend a minimum of 2-inches beyond the damaged area. A second layer shall be wound similarly but in the opposite direction and pitch.

F. Unbonded Tendon Bundles:

1. No more than two strands shall be tied into a bundle to reduce the risk of concrete settlement shrinkage cracks.

3.3 CONCRETE PLACEMENT

A. Concrete placement shall be in such a manner that alignment of tendons and conventional reinforcement remains unchanged.

B. Concrete shall be properly placed consolidated and vibrated. Vibrating shall be done with care and in such a manner to insure uniform compaction of concrete at tendon anchorages and to avoid displacement of tendons and anchorage components. See SECTION 03 30 00.

3.4 PRIOR TO STRESSING:

A. Placing Strand in Ducts:

1. Prior to placing strands into a duct, demonstrate to the satisfaction of the ENGINEER that the duct is free and clear and contains no water. All grouting and vent ports shall be exposed and also free and clear.
2. Multi-strand tendons may be pulled or pushed into the duct either a strand at a time or as a complete tendon. If the CONTRACTOR chooses to place one strand at a time in the duct, care shall be taken to avoid wrapping a strand around previously placed strands. If it appears that this is occurring in the opinion of the ENGINEER, all strands shall be removed and pulled through as a complete tendon.
3. Strands shall be clean, dry and free from objectionable matter, such as dirt or other material that could inhibit bond of grout to the prestressing steel, as it is placed in the duct. Do not permit the strand(s) to drag along the ground, across sharp edges or handle in any way that exposes the strands to potential damage. Carefully feed the strand through the

anchorage block cast in the concrete. Do not permit the strand(s) to rub or scrape against the edge of the anchorage block.

4. Placing the Stressing Head:
   a. Visually review the stressing head to confirm that it is free from any defects such as cracks.
   b. Confirm that the anchorage block and stressing head are both clean.
   c. Carefully slide the stressing head over the strand. Avoid unwinding individual wires of a strand.
5. Wedges:
   a. Inspect wedges prior to placing the wedges in the anchor head.
   b. Wedges shall be wiped clean, free from defects, and lubricants.
   c. Carefully place wedges around the strand to assure even seating and proper transfer of stress.

3.5 STRESSING OF PRESTRESSING STEEL:

A. General:

1. Tendon stressing shall not begin until the concrete has reached an appropriate strength and the ENGINEER accepts testing results indicating that the concrete meets or exceeds the anchorage concrete design capacity. Wedge cavities shall be clean and dry.
2. During stressing operations, the CONTRACTOR shall provide safety measures necessary to prevent accidents due to possible breaking of the prestressing steel, bursting of concrete or high-pressure leakage of hydraulic fluid.
3. The tensioning process shall be conducted so that the force being applied, and the elongation produced, may readily be observed and measured. Tendon stressing for walls shall be performed from a scissors lift to facilitate viewing of gage pressure, elongation measurement and wedge seating.
4. Unless otherwise permitted in writing, the ENGINEER shall be present during stressing operations. Stressing operations shall be as recommended by tendon supplier and as accepted by the ENGINEER. When welding or burning near tendons, care should be exercised to prevent overheating tendon components.
5. All strands in each tendon, except for those in flat ducts with not more than four strands, shall be stressed simultaneously with a multi-strand jack.
6. All strands shall be free from kinks or twists. Any unwinding of a strand in excess of one turn after tensioning operations have begun shall not be permitted.
7. If a grout or vent port has been sheared-off or covered by concrete, the vent or port shall be re-constructed prior to placing strand in the duct except those tendons that have been fabricated with tendons and a dead-end anchorage.

B. WST Tendon Friction Testing:

1. Wall

   a. Conduct a friction loss test on the first multiple strand wall tendon to be stressed. This test shall be conducted and supervised by a person with prior experience conducting similar tests. The purpose of the test is to verify friction values used in the design and that the design prestress force can be attained.
   b. In the case of a discrepancy between the design calculated prestress force and friction test force, the entire stressing operation shall be checked carefully and the source of error determined and corrected before proceeding further with stressing. A tolerance of ± 5% is acceptable.

2. Roof and Floor Slabs

   a. Stress the first roof slab unbonded tendon and adjust the stressing force if the measured elongation is greater or less than the calculated elongation.

C. Anchorage:

1. Tendon shall be anchored at an initial or "transfer stress" that will result in retention of working forces or stresses of not less than those shown on Drawings as final after all losses. Stress transfer on strand tendons shall be such as to prevent undue scraping or scarring of the strand by the wedge grippers during seating.
2. Anchorage wedge cavities shall be clean and free from lubricants and objects that could interfere with proper wedge seating. Use a cloth to thoroughly remove lubricants such a tendon grease
3. Wedge Grippers:
   a. Wedge grippers on strand tendons shall be properly aligned before and after stressing to insure proper stress retention.
   b. Wedges shall seat evenly in the anchorage. A tolerance of 1/16 inch is acceptable.

D. Elongation Records:

1. Elongations shall be neatly and legibly marked on the concrete adjacent to the anchorage.
2. Keep a written record of gage pressure and elongation for each strand or tendon for submittal to the ENGINEER for review and acceptance.
3. Lift off pressures of any second pull shall be tabulated along with the gage pressures and elongations.
4. Elongations and gage pressures shall be recorded and submitted to the ENGINEER within one day of stressing completion.
5. All elongations shall be measured after seating.

E. Cutting of Tendon Tails:

1. Projecting strand tails shall not be cut-off until stressing is 100% complete and stressing records reviewed and accepted by the ENGINEER. The ENGINEER shall write a letter to the CONTRACTOR indicating acceptance of stressing elongations.
2. Upon approval of the elongation records and completion of stressing operation, excess strand shall be cut off with an abrasive disc cutter approximately one inch from the face of anchorage casting. Tendon tails shall be carefully cut to avoid damage to the remaining tendon, wedges or anchorage. If any damage occurs to the tendon, anchorage or wedges, the CONTRACTOR will be required to de-stress, replace and re-stress the tendon when feasible. The cut shall be made at least 3/4 inch from the wedges or as required to permit placement of the cap on the anchorage.

SECTION 03 23 40
WST POST-TENSIONED CONCRETE TENDON FRICTION TESTING

PART 1 GENERAL

1.1 WORK INCLUDED

A. Furnish all labor, tools and equipment for testing post-tensioned concrete tendons as herein specified and as shown in the project drawings.

Tendon stressing tests are drequired to confirm that the prestressing as designed provides stress equal to or greater than the stress measured in the field.

1.2 GENERAL

A. The CONTRACTOR shall conduct a test on the first floor and roof slab mono-strand floor slab tendon, and wall multi-strand tendon, to be stressed. The purpose of the test is to verify a curvature friction constant and tendon anchorage seating losses used in the design and that the design prestress stress can be attained. This test shall be conducted and supervised by a person with prior experience with similar tests.

1.3 REFERENCED STANDARDS – N/A

1.4 SUBMITTALS

A. Confirmation of testing procedures and equipment

PART 2 PRODUCTS

2.1 EQUIPMENT

A. Load cell

B. Strain Indicator

C. Dead end ram

D. Live end ram

E. Anchorhead spacers

F. Retainer Plate

G 5 Gallon OTC Pump

H. Gas Enerpac

PART 3 EXECUTION

3.1 GENERAL

A. This Section describes procedures for tendon testing.

1. Hand seat wedges at live end anchor head. Place anchorage spacers as needed to achieve ram clearance out of the live end stressing pocket. Once centered, anchorage spacers shall not bear on concrete.
2. Thread on live end ram.
3. Slide dead end anchor head onto tails. Leave approx. 1” from bearing plate. Install dead end wedges into anchorage cavities but DO NOT PUSH anchor head and wedges up to bearing plate.
4. Slide jack chair over tails to anchor head. Loop tie wire through holes in jack chair under anchor head and tie to fix anchor head in jack chair. Slide jack chair up to bearing plate and bolt in place. Seat wedges in wedge cavities evenly.
5. Install load cell centering disk, load cell, ram centering disk and dead end ram on tails. Make sure ram is not bearing on load cell until after it is zeroed out.
6. Calibrate load cell with zero load, then thread on to tails.
7. Stroke out dead end ram at least 5-6”. Note that additional stroke of the ram will not be required. Thread on dead end ram.
8. Check all components at dead end and confirm that everything is centered.
9. Engage grippers on dead end ram.
10. Stress live end ram to 20% Pjack. Mark elongation datum point at live end.
11. Stress live end in 500 PSI increments every minute. At each increment, record dead end pressure and load cell reading. Start timing once the pressure and load cell reading have been recorded.
12. Once at 100% Pjack, mark and record elongation. Take dead end readings in 1 minute increments for 15 minutes or until no change for five minutes.
13. Measure piston extension on dead end ram. Cut wire holding dead end anchor head. Carefully and slowly, relieve the dead end ram pressure. Stop as soon as pressure is transferred to anchor head. Measure piston and record seating. Make sure wedges are still even and seated correctly in anchor head. Remove dead end ram.
14. Re-stress live end ram to 100% Pjack. Mark and record elongation.
15. Subtract dead end seating from live and elongation. Enter this elongation as pull 1 on stressing record.
16. When dead end is stressed (in stressing sequence) measure elongation off ram as usual.

17. Final elongation is sum of elongation calculated in step 18 (live end, less dead end seating) and dead end elongation from step 19.

END OF SECTION

SECTION 03 23 50
WST POST-TENSIONED CONCRETE TENDON GROUTING

PART 1 GENERAL

1.1 WORK INCLUDED

A. Work includes furnishing grout, mixing and grouting post-tensioned tendon ducts after the tendon strands have been elongated.

B. All incidental and appurtenant operations involving post-tensioning grout shall be done in strict conformance with the Drawings and other terms and conditions of the Contract. All standard Specifications made a portion of this Specification by reference shall be the latest edition and revision thereof. The ENGINEER shall be given 24 hours notice prior to grouting of any tendon. The ENGINEER shall be present during grouting operations.

C. The person responsible for grouting shall be an American Segmental Bridge Institute (ASBI) Certified Grouting Technician, and shall be on site full time during grouting operations.

D. All wall tendon grouting and vent ports shall be exposed, open and clear prior to installing strand.

E. Wall tendon grouting shall be performed from a single low point tendon port. Grouting shall be performed continuously from one port and direction.

1.2 QUALITY STANDARDS

A. Post-Tensioning Institute (PTI):

1. Specification for Grouting of Post-Tensioned Structures

B. American Segmental Bridge Institute (ASBI):

1. Grouting Committee Interim Statement on Grouting Practices

C. American Association of Highway and Transportation Officials (AASHTO):

1. LRFD Construction Specifications Section 10 – Prestressing

D. American Society of Testing Materials (ASTM):

1. C 33 - Standard Specification for Concrete Aggregates
2. C 94 - Standard Specification for Ready-Mixed Concrete
3. C 114 - Standard Test Methods for Chemical Analysis of Hydraulic Cement
4. C 117 - Standard Test Method for Materials Finer than 75-µm (No. 200) Sieve in Mineral Aggregates by Washing
5. C 144 - Standard Specification for Aggregate for Masonry Mortar
6. C 150 - Standard Specification for Portland Cement

7. C 185 - Standard Test Method for Air Content of Hydraulic Cement Mortar
8. C 191 - Standard Test Method for Time of Setting of Hydraulic Cement by Vicat Needle
9. C 260 - Standard Specification for Air-Entraining Admixtures for Concrete
10. C 494 - Standard Specification for Chemical Admixtures for Concrete
11. C 595 - Standard Specification for Blended Hydraulic Cements
12. C 618 - Standard Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use as a Mineral Admixture in Concrete
13. C 939 - Standard Test Method for Flow of Grout for Preplaced-Aggregate Concrete (Flow Cone Method) – modified for grout with thixotropic properties
14. C 940 - Standard Test Method for Expansion

1.3 SUBMITTALS

A. Shop Drawings marked up in the field during grouting showing all grout ports labeled as inlet or outlet, direction of grout flow, and sequence and timing of vent closings.

B. Written grouting procedure per PTI Specification 4.6.1.

C. Grouting Equipment.

D. Prepackaged grout mix.

E. ASBI Certified Grouting Technician Certificate for grouting superintendent per this Section.

F. Record of grouting operation describing conditions such as, ambient air, duct and grout temperatures, grouting conditions, problems and corrective actions, duct grouting time, grout pressures, volume of grout pumped, and results of any testing.

1.4 DELIVERY, STORAGE AND HANDLING

A. Prepackaged grout shall be stored in a location that is both weatherproof and convenient to the work. Prepackaged grouts may be stored outdoors so long as the grout is on a raised platform and is fully protected from the weather and temperature extremes that affect the grout performance fluidity. For example it can be necessary to store grout in refrigerated storage when used in the heat of summer. Comply with the manufacturer's specifications and recommendations

B. Prepackaged grouts shall not be stored on site for more than one month.

C. All bags of grout shall be unopened. Partially used and torn bags are not acceptable and shall be rejected.

D. Prepackaged bags of grout shall not be stored in temperatures below 32°F.

PART 2 PRODUCTS

2.1 PREPACKAGED GROUT MANUFACTURERS

A. Approved Manufacturers:

1. US Spec – NV 50
2. Masterbuilders – Masterflow 1205

2.2 WATER

A. Only clean potable water shall be used.

2.3 GROUT INLETS, OUTLETS AND VENTS

A. All inlets, outlets and vents shall be detailed to be leak free, allow complete venting of the duct, and not interrupt the grout flow.

B. Inlet and outlet pipes shall be transparent 3/4-inch diameter rigid plastic pipe.

C. Inlets and outlets shall be equipped with dual mechanical shut-offs installed at high points in the tendon profile and on ends of tendons. All inlets and outlets require two lever-action ball valves (gas cocks). Inlet and intermediate outlets need the additional secondary valves for injection nozzle disconnects, and all inlets and outlets use the secondary valves as pressure safeties when closing primary valves after grouting.

D. Grout vents shall be made from polypropylene corrugated hose.

E. Vents shall be equipped with a shut-off valve that is capable of reopening and closing.

F. Vents shall be capped with a plastic cap that screws onto either the inside or outside of the vent pipe.

G. Tendon anchorages shall have an integral vent and positive seal.

2.4 GROUTING EQUIPMENT

A. The grouting equipment shall include a shear type mixer capable of continuous shear mixing which will produce a grout free of lumps and undispersed cement. The mixer shall be able to deliver a continuous supply of grout to the pumping equipment.

B. Accessory equipment that will provide for accurate solid and liquid measures should be provided to batch all materials including, but not limited to, scales, measured buckets, graduated cylinders, etc.

C. The pump shall be a screw or positive displacement type and be able to produce an outlet pressure of at least 145 psi. The pump should have seals adequate to prevent introduction of oil, air or other foreign substance into the grout, and to prevent loss of grout or water. The pump shall be capable of continuous operation with little variation of pressure and shall include a system for recirculating the grout, a bypass, while actual grouting is not in progress. The pump shall be capable of maintaining pressure on completely grouted ducts and shall be fitted with a valve that can be locked off without loss of pressure in the duct.

D. A pressure gauge having a full-scale reading of no greater than 290 psi shall be placed at some point in the grout line between the pump outlet and the duct inlet.

E. The grouting equipment shall contain a screen having clear openings of 0.125-inch maximum size to screen the grout prior to its introduction into the grout pump. This screen should be easily accessible for inspection and cleaning.

F. The grouting equipment shall utilize gravity feed to the pump inlet from a hopper attached to and directly over it. The hopper must be kept at least partially full of grout at all times during the pumping operation to prevent air from being drawn into the post-tensioning duct.

G. Under normal conditions, the grouting equipment should be capable of continuously grouting vertical tendons at a rate no faster than approximately 15-feet per minute. Horizontal, long, highly draped profiles and large ducts shall be grouted at a rate no greater than 50-feet per minute.

H. Adequate flushing equipment and a potable water supply shall be available onsite to facilitate complete removal of the grout from the duct if it should become necessary.

PART 3 EXECUTION

3.1 GENERAL

A. General:

1. Grouting shall comply with the PTI Guide Specification for Grouting of Post-Tensioned Structures unless otherwise modified herein.
2. Written instructions for the grouting procedure shall be available on the site. Grouting shall be carried out as soon as possible after the stressing operation of the tendon. However, grouting of conduit shall not begin until 6 to 24 hours after stressing.

B. The temperature of the concrete should be 40°F or higher from the time of grouting until job-cured 2-inch cubes of grout reach a minimum compressive strength of 800 psi.

C. Grout temperature shall be between 50°F – 85°F before entering the duct. Storage in a temperature controlled environment may be required to meet these temperature conditions Water shall be heated or cooled as necessary to maintain the grout within the range of 50°F – 85°F.

D. Prestressing steel placed into ducts but not grouted within 10 days shall be protected against corrosion. As described above tendon ducts shall be carefully and thoroughly plugged to prevent the entry of water and other foreign matter into the duct.

E. Grouting of the duct shall be carried out without interruption.

F. Before proceeding with grouting operations, both materials and equipment should be inspected.

G. Prior to grouting, conduit shall be made free of water, dirt, and other foreign substances. Using compressed air, ducts shall be checked for blockages and leakages. In cold climates after a period of freezing temperatures, care shall be taken to ensure that the duct and tendon are free from any ice accumulation before starting grouting operations. The temperature shall be checked inside the duct. Grouting shall insure complete filling of voids between wires or strand and conduit and end anchorages. Conduit shall be completely filled from one end with grout under pressure less than 145 psi. However, normal grouting operations should typically be performed at approximately 75 psi. Care shall be exercised to insure continuous grout outflow.

3.2 GROUT MIXING

A. Follow the manufacturer's written instructions.

B. Prior to mixing the following shall be checked:

1. Temperature of prepackaged grout
2. Possible caking
3. Temperature and available quantity of water
4. Shelf-life of all materials
5. Performance of the equipment to be used including stand-by equipment
6. Leak free connections to inlets and outlets and proper operation of valves.

3.3 PREPARATION OF THE DUCT

A. Flushing of ducts with air or water shall be optional as required by the ENGINEER, and shall not be performed without written approval from the ENGINEER.

B. Ducts with concrete walls (cored ducts) should be flushed to ensure that the concrete is thoroughly wetted.

C. Water used for flushing ducts may contain slacked lime (calcium hydroxide) or quicklime (calcium oxide) in the amount of 0.1 pounds per gallon.

3.4 INJECTION OF THE GROUT

A. Grout shall be injected from near the lowest end of the tendon in an uphill direction. All grout vents shall be open when grouting starts.

B. Grout shall be used within 30 minutes of the first addition of water to ensure the flowability of the grout.

C. The method of injecting grout shall ensure complete filling of the ducts and complete surrounding of the strand or bar with grout. Grout shall be pumped through the duct and flow continuously at the first outlet after the inlet, until visible slugs of water and air are ejected and the consistency of the grout is equivalent to that of the grout injected, at which time the outlet shall be closed.

D. All outlets shall be closed in a similar manner one after another in the direction of the flow except that at intermediate crests, outlets placed a short distance downstream of the crest shall be closed before their associated crest outlet.

E. The pumping pressure at the inlet shall not exceed 145 psi for internal polyethylene or oval or flat steel ducts; or 245 psi for internal circular steel ducts. However, normal grouting operations will typically be performed at approximately 75 psi.

F. If the actual grouting pressure exceeds the maximum allowed, the inlet shall be closed and the grout shall be injected at the next outlet (which now becomes an inlet) which has just been, or is ready to be closed as long as a one-way flow is maintained. Grout shall not be injected into a succeeding outlet from which grout has not yet flowed.

G. When one-way flow of grout cannot be maintained, or when grouting is interrupted, the grout shall be immediately flushed out of the duct with water. The flushing pressure shall be limited to the same grouting pressures as specified for grouting.

H. To ensure that the duct remains filled with grout, the outlet shall be closed first and the inlet closed after holding the pumping pressure for that tendon duct. The inlet shall then be sealed off under pressure.

3.5 POST-GROUTING OPERATIONS

A. Valves, caps and pipes at the inlet and outlets shall not be removed or opened until the grout has set. The filled ducts shall not be subjected to shock or movement within 24 hours of grouting.

B. When the grout has hardened, outlets shall be cut-off and removed to below the concrete surface. The recess shall be filled with a non-shrink, non-metallic grout to prevent ingress of water.

3.6 GROUT QUALITY CONTROL TESTING

A. Production testing of the grout shall be performed by the CONTRACTOR. Production testing shall consist of:

1. Two mud balance tests per day or when there is a visual or apparent change in the characteristics of the grout.
2. Minimum of two fluidity tests (flow cone) – one at the mixer and one at the duct outlet, using the modified version of ASTM C 939, repeat testing every two hours of grouting operations. The efflux time shall be within ±5 seconds of the values established during laboratory testing.

B. Record of Grouting Operation:

1. Provide records of grouting for review by the ENGINEER. Copies shall be submitted to the ENGINEER within 72 hours of grouting.
2. Information to be noted in the records shall include but shall not necessarily be limited to the following: date grouted, number of days from stressing to grouting, type of grout mix, tendon(s) grouted, injection end and applied grouting pressure, summary of any problems encountered and corrective action taken.
3. An accurate record of the volume of the grout pumped into the duct compared to the volume of the duct adjusted for the grout displaced by the prestressing strand shall be determined and reported. A reasonable measure of the complete filling of the duct is consequently attained once the volume of the grout is determined.

END OF SECTION

SECTION 03 30 00
CAST-IN-PLACE CONCRETE

PART 1 GENERAL

1.1 WORK INCLUDED

A. The CONTRACTOR shall furnish all labor, tools and equipment for the construction of cast-in-place concrete as shown on the Drawings and herein specified.

The ready mixed concrete supplier shall have an ACI certified Field Technician I on site during each concrete placement to direct the addition of water and be available to perform other "QC" activities and mix adjustments.

B. Aggregate Industries and Martin Marietta Materials are pre-qualified suppliers of ready-mixed concrete. The CONTRACTOR is required to select one of the above firms for inclusion with the bid. The ENGINEER and OWNER will evaluate the merits and add/deduct cost of any other supplier submitted by the CONTRACTOR after being awarded the project.

C. Non-Reactive Aggregates

1. **Aggregates shall be tested for reactivity in accordance with ASTM C 1260 every month concrete is being placed. Test results shall be submitted to the ENGINEER for review.**
2. Reactivity measured shall be in accordance with ASTM C 33, Appendix, paragraph X1.1.

1.2 QUALITY STANDARDS

A. American Society for Testing Materials (ASTM):

1. C 29 - Test Method for Unit Weight and Voids in Aggregate
2. C 31 - Standard Practice for Making and Curing Concrete Test Specimens in the Field
3. C 33 - Concrete Aggregates
4. C 39 - Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens
5. C 88 - Test Method for Soundness of Aggregates by Use of Sodium Sulfate or Magnesium Sulfate
6. C 94 - Ready Mixed Concrete
7. C 123 - Test Method for Lightweight Particles in Aggregate
8. C 127 - Test Method for Specific Gravity and Absorption of Coarse Aggregate
9. C 128 – Test Method for density, Relative Density (Specific Gravity) and Absorption of Fine Aggregate

10. C 131 - Test Method for Resistance to Degradation of Small-Size Coarse Aggregate by Abrasion and Impact in the Los Angeles Machine
11. C 136 - Test Method for Sieve Analysis of Fine and Coarse Aggregates
12. C 143 - Standard Test Method for Slump of Hydraulic Cement Concrete
13. C 150 - Portland cement
14. C 157 - Test Method for Length Change of Hardened Hydraulic Cement Mortar and Concrete
15. C 173 - Test Method for Air Content of Freshly Mixed Concrete by the Volumetric Method
16. C 192 - Practice for Making and Curing Concrete Test Specimens in the Laboratory
17. C 231 - Test Method for Air Content of Freshly Mixed Concrete by the Pressure Method
18. C 232 - Standard Test Methods for Bleeding of Concrete
19. C 260 - Air-entraining Admixtures for Concrete
20. C 295 - Standard Guide for Petrographic Examination of Aggregates for Concrete
21. C 311 - Test Methods for Sampling and Testing Fly Ash or Natural Pozzolans for Use as a Mineral Admixture in Portland-Cement Concrete
22. C 452 - Standard Test method for Potential Expansion of Portland-Cement Mortars Exposed to Sulfate.
23. C 494 - Chemical Admixtures for Concrete
24. C 595 - Specifications for Blended Hydraulic Cements
25. C 618 - Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use as a Mineral Admixture in Portland Cement Concrete
26. C 979 - Specification for Pigments for Colored Concrete
27. C 1074 - Practice for Estimating Concrete Strength by the Maturity Method
28. C 1260 - Test Method for Potential Alkali Reactivity of Aggregates (Mortar-bar Method)
29. C 1602 - Specification for Mixing Water Used in the Production of Hydraulic Cement Concrete
30. C 1603 - Test Measurement of Solids in Water
31. C 1621 - Test Method for Passing Ability of Self-Consolidating Concrete by J-Ring.
32. E 319 - Standard Specification for Agencies Engaged in the Testing and/or Inspection of Materials Used in Construction

B. American Concrete Institute (ACI):

1. ACI 117, Standard Specifications for Tolerances of Concrete Construction and Materials
2. ACI 211.1, Standard Practice for Selecting Proportions for Concrete
3. ACI 212, Guide for Use of Concrete Admixtures
4. ACI 221, Guide for Use of Normal Weight Aggregates
5. ACI 228, In-Place Methods to Estimate Concrete Strength

6. ACI 301, Structural Concrete for Buildings
7. ACI 302.1R, Guide for Concrete Floor and Slab Construction
8. ACI 304, Guide for Measuring, Mixing, Transporting and Placing Concrete
9. ACI 305, Hot Weather Concreting
10. ACI 306, Cold Weather Concreting
11. ACI 308, Standard Practice for Curing Concrete
12. ACI 309, Standard Practice for Consolidating Concrete
13. ACI 318, Building Code Requirements for Reinforced Concrete
14. ACI 503, Use of Epoxy Compounds

C. National Institutes of Standards and Technology (NIST):

1. NIST Handbook No. 44 – Specifications, Tolerances and Other Technical Requirements for Weighing and Measuring Devices

1.3 SUBMITTALS

A. General

1. The following list is to be used as a minimum since not all products are listed and others that are listed may not be required for every project.

B. Admixtures (such as air-entraining and water-reducing admixtures):

a. Test reports
b. Certification of conformance with applicable ASTM Specification
c. Calcium chloride percentage

2. Fly ash:
   a. Certified compliance with ASTM C 618
3. Aggregates:
   a. Sieve analyses (ASTM C 117 and C 136)
   b. Specific Gravity and Absorption (ASTM C 127)
   c. Lightweight Particles (ASTM C 123)
   d. Unit weight and voids (ASTM C 29)
   e. Potential Alkali Reactivity (ASTM C 1260)
   f. Clay lumps and Friable Particles (ASTM C 142)
   g. Sodium Sulfate Soundness (ASTM C 88)
   h. Magnesium Sulfate Soundness (ASTM C 88)
   i. Los Angeles Abrasion Test Results (ASTM C 131)
4. Ready Mixed Concrete Mix Designs
   a. Submit mix designs in accordance with ACI 301, Section 4.
   b. Only field test data is acceptable for mix design proportion approval. Proportioning based on trial mixtures in unacceptable.
   c. The water / (cement + pozzolans) ratio shall control the permissible water addition to the mix. The w/(c + p) shall not be exceeded.
5. Vibrator specifications
6. Vibrating screed specifications

7. Ready-mixed concrete plant production contingency plan
8. MSDS Sheets

C. Test Reports and Records:

1. Mix Design Field Test Data Record for each mix.
2. Cylinder test reports
    a. Slump
    b. air entrainment
    c. Seven and 28-day compressive strength test results
    d. Qualification method
    e. Bleed rate versus time
3. Mix Design Field Test Data Record for each mix:
    a. Slump
    b. Air entrainment
    c. Seven- and 28-day compressive strength test results
    d. Qualification method
4. Hydraulic cement Material Certification Report:
    a. Chemical (ASTM C 150) Chemical Analyses
    b. Physical (ASTM C 1157 and C 150) Analyses
    c. Optional Requirements for equivalent alkalis analyses
    d. Certification for compliance with ASTM C 150 and C 1157
5. Chemical and Physical Analysis of Fly Ash (ASTM C 618):
    a. Chemical composition
    b. Physical test results
    c. Plant of origin

D. Concrete batch tickets
1. Suppliers name and date
2. Truck number
3. Project name and location
4. Any concrete class designation
5. Cubic yards batched
6. Time batched
7. Mix design number
8. Type, manufacturer and quantity of each admixture in ounces
9. Type, manufacturer and weight of cement and any pozzolans
10. Weights of fine and coarse aggregates
11. Moisture content of fine and coarse aggregates
12. Gallons of water batched (including ice)
13. Gallons of water that can be added without exceeding the w / c ratio.
14. Temperature of the mix at the time of batching

E. Hot and Cold Weather Placing and Curing Plans

F. Placement size and configuration plans

1.4 QUALITY ASSURANCE

A. Acquire cement and aggregate from the same source for all work.

B. Conform to ACI 305

C. Conform to ACI 306

D. Conform to ACI 309

1.5 SOURCE QUALITY CONTROL

A. Test cement for total chloride content.

B. Test fly ash in accordance with ASTM C 311

C. Batch Plant Inspection

1. ENGINEER shall have access to and have the right to review batch plants, cement mills and facilities of suppliers, manufacturers and subcontractors providing products included in this specification.
2. Batch plant equipment shall be either semi-automatic or fully-automatic in accordance with ASTM C 94.

1.6 CONTRACTOR ASSISTANCE

A. The CONTRACTOR shall assist the OWNER or his concrete testing consultant as requested during the performance of quality control testing.

B. Concrete for testing will be sampled from the point of the ready-mixed truck discharge chute. When concrete is placed by concrete pumper, additional testing may be performed at the point of pumper discharge hose at the ENGINEER's discretion.

1.7 DELIVERY, STORAGE AND HANDLING

A. The ready-mixed concrete truck driver shall provide the batch ticket to the ENGINEER at the time of concrete delivery. Hand written modifications to computerized tickets are unacceptable.

B. The batch ticket shall be modified on site to record the:

1. Gallons of water added by the ready-mixed truck operator
2. Number of revolutions of drum at mixing speed after the addition of any water or admixtures
3. Discharge time
4. Approximate location of batch discharge in the structure component or paving.

C. Delivery shall conform to the recommendations of ACI 304 as determined by the ENGINEER.

PART 2 PRODUCTS

2.1 CEMENT

A. Portland Cement Type I II and sulfate resistant shall conform to ASTM C 150. The maximum alkali content shall be ≤ 0.60%.

2.2 AGGREGATES

A. General

1. Aggregates shall be furnished from one source for the entire work.
2. All aggregates shall be natural aggregates. Recycled concrete aggregates are unacceptable.
3. Non-potentially reactive
   a. Aggregates shall be tested for reactivity in accordance with ASTM C 1260 once a month concrete is placed. Aggregates shall be tested, and report submitted to the ENGINEER not less than every 30 days.
   b. Reactivity measured shall be in accordance with ASTM C 33, Appendix, paragraph X1.1.
4. Soundness
   a. Test fine and coarse aggregates in accordance with ASTM C 33.
   b. Test fine and coarse aggregates in accordance with ASTM C 88 using sodium sulfate solution.

B. Fine Aggregates

1. Fine aggregate shall consist of hard, strong, durable particles conforming to the provisions of ASTM C 33. Fine aggregates shall be a natural sand or blend of natural sand and crushed sand.
2. Crushed sand must be less than 50% of the total sand measured by dry weight.
3. Fine aggregates shall conform to the grading and quality requirements of ASTM C 33
4. The total materials passing the No. 200 sieve shall be ≤ 4% by weight.
5. Deleterious substances shall be limited to:
   a. Table 1, ASTM C 33.
   b. Total deleterious material finer than the No. 200 sieve shall be ≤ 3% by weight.
   c. Coal and lignite shall be ≤ 0.50% by weight

C. Lightweight Fine Aggregate for ICC

1. Expanded shale, clay or slate (ESCS) lightweight aggregate produced by the rotary kiln method shall meet ASTM C 330.

D. Coarse Aggregate

1. Coarse aggregates shall conform to the provisions of ASTM C 33.
2. Coarse aggregate shall be crushed aggregate or natural gravels.
3. Coarse aggregates shall conform to ASTM C 33, Size No. 8, Size No. 67, Size No. 467 or Size No. 57.
4. The maximum size aggregate shall conform to the requirements of ACI 318/318R.
5. Limit deleterious substances in accordance with the values found in ASTM C 33, Table 3 for exposed concrete.
6. If the aggregates used are known to be reactive with high alkali cement as determined by ASTM C 2295, or its reactivity of the aggregates is unknown, the used of low alkali cement as defined in ASTC C 150, Table 2, is required to provide protection from potential alkali aggregate reaction.

2.3 FLY ASH

A. Finely Divided Mineral Admixtures (Fly Ash):

1. Mineral admixtures shall be limited to fly ash conforming to ASTM C 618 Class F.
2. Fly ash Class F substitution for cement is limited to ≤ 5% by weight of cement or as otherwise limited by this specification and ASTM C 618.

2.4 WATER

A. Water shall be clean and free from injurious amounts of oils, acids, alkalis, salts, organic materials, or other substances that may be deleterious to concrete or steel.

B. Water for mixing concrete shall conform to ASTM C 1602 and ASTM C 1603.

C. Mixing water for prestressed pretensioned and prestressed post-tensioned concrete or for concrete, which will contain aluminum embedments, shall not contain deleterious amounts of chloride ion.

D. Unless otherwise permitted or specified in the Drawings, the concrete shall be proportioned and produced to have a slump not to exceed that shown in Tables 1 – 5 in Paragraph 2.5 at the ready-mixed truck discharge chute. The slump shall be determined by ASTM C 143.

2.4 ADMIXTURES

A. General:

1. Admixtures to be used in concrete shall be subject to prior review and acceptance by the ENGINEER.
2. The admixture shall maintain the same composition and performance throughout the work as the product used in the concrete proportions established in accordance with ACI 211.

3. Admixtures containing chloride ions shall not be used.
4. The products from one manufacturer shall be used to assure compatibility between admixtures and to avoid adverse impacts to concrete durability and quality.

B. Chemical Admixtures Conforming to ASTM C 494:

1. The table below identifies seven types of chemical admixtures meeting ASTM C 494 that can added to Portland cement for the purpose or purpose indicated.

C.

Type	Purpose
A	Water Reducing
B	Retarding
C	Accelerating
D	Water Reducing and Retarding
E	Water Reducing and Accelerating
F	Water Reducing, High Range
G	Water Reducing, High Range and Retarding

D. Air Entrainment:

1. An air-entraining agent shall be used in all concrete. The agent used shall conform to ASTM C 260.
2. The air entraining agent shall maintain the air percentage as batched within ± 1% for time required for concrete placement.
3. The admixture shall be added to the mix in accordance with ASTM C 94.
4. The admixture in the concrete shall be non-toxic after 30 days in accordance with ASTM C 260.

E. Water Reducing, Set-Controlling Admixture:

1. The concrete mix shall contain a mid or high-range water-reducing admixture that conforms to ASTM C 494 classification A, F or G.

F. Hydration Stabilizer Admixture:

1. The mix shall contain a hydration stabilizer admixture, DELVO manufactured by BASF Admixtures, Inc. (BASF) or Recover by W. R. Grace, meeting the requirements of ASTM C 494 Classification B and Type D, to delay the start of hydration reaction.
2. The actual amount of hydration stabilizer required will depend on transit time and ambient environmental conditions at the time of concrete placement. The concrete producer shall conduct tests to verify proper

hydration dosage rates for the desired delay in hydration reaction. The CONTRACTOR shall provide test results to the OWNER.

a. The desired delay of hydration for wall and column placements, i.e., placements more than 4-feet high, is 30 minutes when the transit time is less than 45 – minutes.
b. The desired delay for floor slab, footing and beam placements, i.e., placements 4-feet or less in height, can be the same as wall placements or less time if desired or if conditions warrant.

2.5 CONCRETE MIX DESIGN

A. GENERAL USE - The concrete mix for general structural use other than water storage tanks use, shall meet the properties and characteristics specified in Table 1 and in other parts of this specification. Minimum reinforcing steel clearance shall be 1-1/2-inches.

TABLE 1

Parameter	Plastic Properties	Hardened Properties	Mix Design	ASTM Specification
28-day compressive Strength, psi		F'c ≥ 4,500		C 873
Shrinkage[1]		≤ 0.04%		C 157
Set time (hours)	6 ± 1			C 403
Air Entrainment, %	5 ± 1 1/2			C 173
Temperature, ° F[2]	50 ≤T≤ 90			C 1094
Slump at max w/(c + p), in.	4 to 7 max.			C 143
Class F fly ash, %[3]			5% max.	A 618
w / c[4]			0.40≤W/C≤0.45	
Cement content, PCY[5]			as required	
ASTM Max. Size aggregate.[6]			No. 8 or No. 67	C 33

1. The water to cement W / C + P ratio shall control the amount of total water added to concrete regardless of admixtures added to the mix.

1 Testing shall be in accordance with ASTM C 157 except that the specimens shall be cured in a water bath until 7-days of age then stored in a 50% humidity environment for an additional 28-days. Percent length change shall be calculated using the 7-day soak measurement as the initial length.
2 Temperature taken at the point of discharge.
3 Fly ash substitution for cement shall be based on specific gravity and weight of materials.
4 W/C+P ration shall be calculated at both minimum and maximum water cement ratios and be within the permitted range of values.
5 Cement content shall be sufficient to produce the required strength.
6 ASTM C 33, Table 2, Size Numbers 8, 467 and 67 or 57.

2. For average ambient air temperatures less than 60-degrees the fly ash shall be eliminated.

B. WATER STORAGE TANK CONCRETE shall be internal curing concrete also known as ICC - The concrete mix for tanks shall meet the properties and characteristics specified in Table 2 and in other parts of this specification. Minimum reinforcing steel clearance shall be 1-1/2-inches.

Light weight aggregate must be pre-conditioned to a minimum moisture content equal to or greater than the desorption value of the particular aggregate before batching the concrete.

Testing for moisture content shall be in accordance with ASTM C 127 or C 128

TABLE 2

Parameter	Plastic Properties	Hardened Properties	Mix Design	ASTM Specification
28-day compressive Strength, psi		F'c ≥ 4,500		C 873
Shrinkage		≤ 0.04%		C 157
Set time (hours)	6 ± 1			C 403
Air Entrainment, %	5 ± 1 1/2			C 173
Temperature, ° F	50 ≤T≤ 90			C 1094
Slump at max w/(c + p), in.	4 to 7 max.			C 143
Class F fly ash, %			0 to 5 max.	A 618
w / c			0.40≤W/C≤0.45	
Cement content, PCY			as required	
ASTM Max. Size aggregate.			No. 67	C 33

1. The water to cement W / C + P ratio shall control the amount of total water added to concrete regardless of admixtures added to the mix.
2. For average ambient air temperatures less than 60-degrees the fly ash shall be reduced to the lesser value or eliminated.
3. For interior slabs that are not subjected to freeze-thaw cycles the maximum air content can be reduced to a 2 ± 1%.
4. Mix will contain about 275 pounds of light-weight fine aggregate replacing about 275 pounds on normal weight fine aggregate.

C. MASS CONCRETE – Mass concrete is defined as slabs or walls ≥ 36 - inches in thickness and minimum reinforcing steel clearance of 3-inches. The mass concrete mix shall meet the properties and characteristics specified in Table 3 and in other parts of this specification.

TABLE 3

Parameter	Plastic Properties	Hardened Properties	Mix Design	ASTM Specification
28-day compressive Strength, psi		F'c ≥ 4,000		C 873
Shrinkage		≤ 0.04%		C 157
Set time (hours)	6 ± 1			C 403
Air Entrainment, %	5 ± 1 ½			C 173
Temperature, ° F	50 ≤T≤ 80			C 1094
Slump at max w/(c + p), in.	3 to 6 max.			C 143
Class F fly ash, %			10 – 20 max.	A 618
w / c			0.40≤W/C≤0.45	
Cement content, PCY			as required	
ASTM Max. Size aggregate.			No. 57 or 357	C 33

1. The water to cement W / C ratio shall control the amount of total water added to concrete regardless of admixtures added to the mix.
2. For average ambient air temperatures less than 60-degrees the fly ash may be reduced to the lesser value but not eliminated.
3. For interior slabs that are not subjected to freeze-thaw cycles the maximum air content can be reduced to a 2 ± 1%.

D. CURB, GUTTER, SIDEWALKS AND PAVING - The concrete mix for site work shall meet the properties and characteristics specified in Table 4 and in other parts of this specification. Minimum reinforcing steel clearance shall be 1-1/2-inches.

TABLE 4

Parameter	Plastic Properties	Hardened Properties	Mix Design	ASTM Specification
28-day compressive Strength, psi		F'c ≥ 3,500		C 873
Shrinkage		≤ 0.06%		C 157
Set time (hours)	6 ± 1			C 403
Air Entrainment, %	5-1/2 ± 1-1/2			C 173
Temperature, ° F	50 ≤T≤ 90			C 1094
Slump at max w/(c + p), in.	4 to 7 max.			C 143
Class F fly ash, %			0 - 20% max.	A 618
w / c			0.40≤W/C≤0.45	
Cement content, PCY			as required	
ASTM Max. Size aggregate.			No. 57	C 33

1. The water to cement W / C + P ratio shall control the amount of total water added to concrete regardless of admixtures added to the mix.
2. For average ambient air temperatures less than 60-degrees the fly ash shall be reduced to the lesser value or eliminated.

E. KICKBLOCKS AND DUCTBANKS - The concrete mix for kickblocks and ductbanks shall meet the properties and characteristics specified in Table 5 and in other parts of this specification. Minimum reinforcing steel clearance shall be 1-1/2-inches.

TABLE 5

Parameter	Plastic Properties	Hardened Properties	Mix Design	ASTM Specification
28-day compressive Strength, psi		F'c ≥ 2,500		C 873
Shrinkage		≤ 0.06%		C 157
Set time (hours)	6 ± 1			C 403
Air Entrainment, %	5-1/2 ± 1-1/2			C 173
Temperature, ° F	50 ≤T≤ 90			C 1094
Slump at max w/(c + p), in.	4 to 7 max.			C 143
Class F fly ash, %			0 - 20 max.	A 618
w / c			0.40≤W/C≤0.45	
Cement content, PCY			as required	
ASTM Max. Size aggregate.			No. 67	C 33

1. The water to cement W / C + P ratio shall control the amount of total water added to concrete regardless of admixtures added to the mix.
2. For average ambient air temperatures less than 60-degrees the fly ash shall be reduced to the lesser value or eliminated.

2.6 BATCHING

A. Measuring and batching of materials shall be done at a batching plant and conform to ASTM C 94.

B. Portland Cement:

1. Either sacked or bulk cement may be used.
2. No fraction of a sack of cement shall be used in a batch of concrete unless the cement is weighed.
3. Bulk cement shall be weighed on scales separate and distinct from the aggregate hopper or hoppers.
4. Batching shall be such that the accuracy of batching shall be plus or minus one percent of the required weight.

C. Water:

1. Unless water is to be weighed, the water-measuring equipment shall include an auxiliary tank from which the measuring tank shall be filled.
2. In lieu of the volume method, the CONTRACTOR will be permitted to use a water-metering device.

D. Aggregates:

1. Aggregates shall be handled from stockpiles or other sources to the batching plant in such a manner as to secure a uniform grading of the material.
2. Aggregates that have become segregated, or mixed with earth or foreign material, shall not be used.
3. Batching shall be so conducted as to result in the weights of material required for each type aggregate within a tolerance of two percent.
4. Free water contents of the coarse and fine aggregates shall be continuously tested and concrete mixture adjusted for moisture conditions of the aggregate in order to meet the designated water/cement ratio.
5. Fine Aggregate:

    a. The proportion of fine aggregate shall be between 36 and 44% by volume of the total aggregates in the concrete.

2.7 CONCRETE MIXING

A. Ready-mixed concrete shall be “central mixed” or “shrink mixed” concrete as defined in ASTM C 94. “Truck mixed” concrete as defined in ASTM C 94 shall be permitted where central or shrink mixed concrete is infeasible.

B. Changes in the amounts or sources of materials of the approved mix are unacceptable without the review and written approval of the ENGINEER.

C. Mixing time shall be measured from the time water is added to the mix, or cement contacts the aggregate.

D. All concrete shall be homogeneous and thoroughly mixed, and there shall be no lumps or evidence of undispersed cement.

E. Mixers and agitators, which have an accumulation of hard concrete or mortar, shall not be used.

F. Ready-mixed concrete shall be mixed and transported in accordance with ASTM C 94.

G. The time elapsing from the time water is added to the mix (or the cement comes in contact with aggregate) that does <u>not</u> contain a hydration stabilizer until the concrete is deposited in place at the site of the work shall not exceed 45 minutes when the concrete is hauled in non-agitating trucks, nor more than 90 minutes when hauled in truck mixers or truck agitators unless otherwise permitted by the ENGINEER.

H. The batch shall be so charged into the drum that a portion of the mixing water shall enter in advance of the cement and aggregates. The flow of water shall be uniform, and all water shall be in the drum by the end of the first 1/4 of the specified mixing time.

I. Cement shall be charged into the mixer by means that will not result in loss of cement due to the effect of wind, or in accumulation of cement on surfaces of hoppers or in other conditions, which reduce or vary the required quantity of cement in the concrete mixture.

J. Add admixtures in accordance with ASTM C 94 and the manufacturer's written instructions.

K. Concrete mix temperatures shall be as specified in ACI 305 (hot weather) and ACI 306R (cold weather) during production, transit, placement and curing.

L. ENGINEER shall have access and the right to inspect batch plants providing concrete to the project.

M. When truck mixed concrete is accepted for the work by the ENGINEER, reverse rotation of the drum is required to discharge all wash water prior to charging the drum with the mix components.

N. Weighing scales shall be tested and certified within tolerances set forth in NIST Handbook No. 44

2.8 TRANSPORTING MIXED CONCRETE - MIXED CONCRETE OR TRUCK MIXERS

A. Transporting of mixed concrete shall conform to ASTM C 94.

B. Truck agitators shall be loaded not to exceed the manufacturer's guaranteed capacity. They shall maintain the mixed concrete in a thoroughly mixed and uniform mass during hauling

C. No additional mixing water shall be incorporated into the concrete during hauling or after arrival at the delivery point, unless approved. If additional water is to be incorporated into the concrete at the site, the drum shall be revolved not less than 30 revolutions at mixing speed after the water is added and before discharge is commenced. One addition of water at the site to adjust mix workability is permitted but the maximum water cement ratio shall not be exceeded.

D. The CONTRACTOR shall furnish a water-measuring device in good working condition, mounted on each transit mix truck, for measuring the water added to the mix on the site. All water tanks on transmit mix trucks shall be filled prior to being batched and arrive at the construction site 100 percent full.

E. Each load of ready mixed concrete delivered at the job shall be accompanied by an electronic ticket showing volume of concrete, the weight of cement in pounds, percent of free water in coarse and dry aggregates, and the total weight of all ingredients in pounds. The ticket shall also show the time of day at which the materials were batched and the reading of the revolution counter at the time the truck mixer is charged.

2.9 CONCRETE VIBRATORS

A. Concrete vibrators for consolidating concrete shall be 2 1/2-inch diameter vibrator powered by a 180Hz three-phase “high cycle” motor in the vibrator head with a frequency under load of 8,500 – 12,500 vibrations per minute (vpm). Concrete vibrators of lesser capacity are unacceptable for use in any part of the construction.

B. The CONTRACTOR shall have at least one standby concrete vibrator ready for use for every two concrete vibrators in use during a concrete placement.

2.10 VIBRATING SCREEDS

A. Vibrating screeds shall be capable of uniformly consolidating the concrete.

B. The screed bar blade shall be constructed of magnesium.

C. Screed bars up to 16-feet in length shall be powered by a single engine and exciter. Screed bars 20 – 24-feet in length shall be powered by two engines and exciters (heads). 18-foot single head screeds are unacceptable.

D. Products manufactured by MBW, Inc., the “Screedemon”, are acceptable. No equivalents. Bobcat of the Rockies is the local distributor.

E. When a “wet” screed is used for concrete placement, the maximum out-to-out width of the wet screeds shall be limited to the wet screed width less 2-feet, over lapping the previously placed concrete by a minimum of 1-foot. Size the screed accordingly.

PART 3 EXECUTION

3.1 GENERAL

A. Concrete placements shall be scheduled a minimum 24 hours in advance with the ENGINEER. Concrete shall be placed only when the ENGINEER is present to conduct the appropriate reviews. Concrete placed in the ENGINEER’s absence is subject to rejection.

B. Concrete can be placed after the ENGINEER performs a final reinforcing steel review prior to closing any formwork.

C. See SECTION 01 32 29 – CONSTRUCTION REVIEW for additional requirements.

D. Pre-placement Meetings

1. The ENGINEER may conduct pre-placement conferences during the week prior to a concrete placement. The purpose of the meeting will be to discuss placement activities, review applicable specifications, testing activities and lines of communication.

2. The ENGINEER will prepare a meeting agenda.

E. The CONTRACTOR shall provide a standby placement technique, such as standby pumper or crane and bucket with a tremie if a pumper is being used, on concrete placements where loss of the placement technique could result in a cold joint. The secondary placement technique is required to assure adequate redundancy for placement completion free of cold joints.

F. Concrete Placements

1. Unless shown in the drawings the CONTRACTOR shall configure, size and sequence placements to account for reinforcing steel restraint, volume change due to shrinkage, concrete strength gain and equipment limitations.
2. The CONTRACTOR shall submit detailed drawings illustrating placement sizes, sequences and joint waterstops for the ENGINEER's review and approval. In the event unacceptable shrinkage cracking occurs in the first of repeated similar placements the CONTRACTOR shall revise means and methods of construction, including revisions to the concrete mix design, to avoid repetition of unacceptable levels of cracking. This includes the revision and re-submittal of any previous reviewed and approved plan.
3. Unless otherwise shown or noted in the Drawings or approved by the ENGINEER beams, girders, brackets, column capitals and haunches shall be placed monolithically as a part of a floor, wall, and column or roof structure component.
5. Unless otherwise shown in the Drawings or permitted by the ENGINEER all joints shall contain a waterstop.

3.2 ADJACENT PLACEMENTS

A. Unless otherwise reviewed and approved by the ENGINEER formwork shall remain in place for 72 hours after completion of a placement.

B. Unless otherwise permitted by the ENGINEER concrete placements shall have attained 70% of their specified 28 compressive strength or been in place for seven days, whichever is less, prior to terminating concrete curing and placing the adjacent concrete.

3.3 CONSTRUCTION JOINTS

A. The location of all construction joints will be subject to the acceptance of the ENGINEER. No horizontal joints are permitted in the walls or columns of water retaining structures.

B. The surface of all construction joints shall be thoroughly cleaned and all laitance and standing water removed. Clean aggregate shall be exposed by abrasive blast cleaning. Wire brushing and air water jets may be used while concrete is fresh provided results are equal to abrasive blast cleaning.

C. When shown in the Drawings construction joints shall be keyed at right angle to the direction of shear. Except where otherwise shown on the Drawings, keyways shall be at least 1-1/2" in depth over at least 25% of the area of the section.

D. Joints shall be spaced to limit the size of each placement to allow for volume change from shrinkage and to minimize the potential of restraint and shrinkage cracking.

1. The size and configuration of all placements shall be reviewed and approved by the ENGINEER.

E. See SECTION 03 30 01 – CONSTRUCTION JOINTS.

3.4 PRIOR TO CONCRETE PLACEMENT

A. Prior to placing concrete, the CONTRACTOR shall remove all debris and materials that would prevent or reduce bonding of the and thoroughly dampen the surfaces that will be in contact with the concrete to be placed. Surfaces shall be clean and saturated surface dry.

B. The CONTRACTOR shall use compressed air from an air-compressor to blow-out construction debris and dirt at the bottom of members to be placed such as walls, beams and columns, prior to final placement of forms that will obscure any joint. The CONTRACTOR shall demonstrate to the ENGINEER that all debris, such as concrete particles, saw dust, loose tie wire, bar tags, tape, trash and dirt, have been thoroughly removed.

C. No concrete shall be placed when form surfaces that will be in contact with the concrete, reinforcement, embedded items or sub-base is less than 34°F. When the mean daily outdoor temperature is less than 40°F, the temperature of the concrete shall be maintained between 50° and 70°F for the required curing period. When necessary, arrangements for heating, covering, insulating, or housing the concrete work shall be made in advance of placement and shall be adequate to maintain the required temperature without injury due to concentration of heat. The maximum temperature differential within the concrete shall be a maximum of 20°F. Combustion heaters shall not be used during the first 24-hours unless precautions are taken to prevent exposure of the concrete to exhaust gases which contain carbon dioxide.

D. Concrete shall not be placed against forms exposed to heating unless the temperature of the forms is first cooled to $\leq$ 90°F.

3.5 OPENINGS AND INSERTS

A. Pipe sleeves, inserts for pipe connections, anchors and forms for pipe holes must be accurately placed and securely fastened to the forms in such a manner that the placing of concrete will not alter their alignment or location.

B. If openings are inadvertently omitted or improperly placed, the ENGINEER may require the concrete to be cored at the proper location.

C. Filling of improperly placed openings shall be done with expansive grout or dry pack or mortar applied with an accepted epoxy adhesive. The surfaces of the opening shall be roughened prior to filling.

3.6 EMBEDDED ITEMS

A. At the time of concrete placement, embedded items should be clean and free from mud, oil and other coatings that may adversely affect bonding capacity.

B. Aluminum embedments shall be coated with a bituminous material to prevent electrolytic action between the embedded item and reinforcing steel that results in concrete deterioration.

C. Embedment items shall be accurately placed and securely fastened to the forms in such a manner that the placing of concrete will not alter their alignment or location.

D. Contact between embedded items and reinforcing steel or tendon ducts is unacceptable and is not permitted.

E. Embedded items that penetrate through a wall or floor shall contain a waterstop.

3.7 DELIVERY

A. Concrete shall be delivered at a rate that will assure continuous progress in the placing and finishing operations.

1. In the event the time intervals between successive loads or batches are such to cause a partial drying of previously placed concrete, the CONTRACTOR shall provide additional equipment of the kind necessary to preclude such delays.
2. Water may be added only once at the site, immediately upon arrival of the truck and provided that the w/ (w + p) ratio of the mix is not exceeded.
3. Except during mixing revolutions, the drum of the vehicle shall operate at agitating speed until discharge of the mix.

B. The concrete at the time of delivery shall be uniform in composition, of the required consistency and required air content.

C. Deliver in accordance with ACI 304.

3.8 PLACEMENT

A. No concrete shall be placed until all formwork, reinforcement, installation of parts to be embedded, bracing of forms, and preparation of surfaces involved in the placing have been reviewed by the ENGINEER.

B. The ENGINEER shall be notified 24 hours prior to a placement and shall be present at all concrete placements unless otherwise permitted in writing.

C. Placement shall conform to:

1. ACI 301
2. ACI 304R
3. ACI 305
4. ACI 306

D. No concrete shall be placed in water except with the written permission of the ENGINEER.

E. All surfaces of forms and embedded materials that have become encrusted with dried mortar or grout from concrete previously placed shall be cleaned of all such mortar or grout before the surrounding or adjacent concrete is placed.

F. Immediately before placing concrete, all surfaces upon or against which the concrete is to be placed shall be free from standing water, mud, debris or loose materials.

G. The surfaces of absorptive materials against or upon which concrete is to be placed shall be moistened thoroughly so that moisture will not be drawn from the freshly placed concrete.

H. The concrete shall be placed by equipment that will prevent segregation or loss of ingredients. The stream of concrete shall not be allowed to separate by permitting it to fall freely over rods, spacers or other embedded materials.

I. No wetting of concrete surfaces during slab finishing operations shall be permitted. Further, no concrete finishing operation shall be permitted while there is water on the surface of slabs and other flatwork.

J. Unless otherwise called out in these Specifications or shown in the Drawings the placement lift depth of concrete shall be limited to two feet or less to minimize surface defects such as air voids that can form on concrete surfaces. Lift depths will be limited to one foot if, in the opinion of the ENGINEER, the quality of the finish is unacceptable at the two-foot lift depth.

K. The temperature of mixed concrete, immediately before placing, shall not be less than 50°F or more than 90°F. Aggregates and water shall be heated or cooled as necessary to produce concrete within these temperature limits. Neither aggregates nor mixing water shall be heated to exceed 150°F.

L. Place and consolidate successive layers prior to initial set of first layer to prevent cold joints.

M. Vertical Free Fall Drop to Final Placement

1. The drop shall be ≤ 5-feet in forms 8-inches or less in width.
2. The drop shall be ≤ 8-feet in forms greater than 8-inches in width
3. Concrete that contains a high-range water reducing agent (superplastizer) may be drop up to 15-feet provided the slump is ≥ 6-inches.
4. For placements greater than specified above, use a steel tremie to limit the drop to that specified. Plastic or PVC membrane type tremies are unacceptable for use in placing concrete in forms.
5. Aluminum tremies are unacceptable.

3.9 CONSOLIDATION

A. All concrete shall be thoroughly consolidated immediately after deposition as recommended in ACI 309.

B. Concrete shall be thoroughly worked around the reinforcing steel, around embedded items and into corners of forms.

C. Vibration shall be supplemented by spading, rodding or forking to eliminate all honeycomb and voids around embedded items.

1. The vibrator shall be inserted vertically, allowing it to penetrate rapidly to the bottom of the lift and at least six inches into the previous lift. The vibrator shall be held at the bottom of lift for five to 15 seconds. The vibrator shall be pulled up at a rate of about three inches per second.
2. The vibrator shall be inserted so that the fields of action overlap. The field of action is approximately eight times the vibrator's head diameter. Thus, for a 2 1/2-inch diameter vibrator, the spacing of each insertion will be approximately 20 inches.
3. Vibration shall be stopped when the concrete surface takes a sheen and large air bubbles no longer escape.
4. Do not use a vibrator to move concrete horizontally.
5. Use care to vibrate in areas requiring careful consolidation such as congested reinforcing steel, embedments, prestressing steel anchorages and construction joints that have waterstops.

D. Vibrating screeds are required for finishing floor slabs.

1. The screed shall be used to produce uniformly consolidated concrete.
2. The screed shall be used in accordance with the manufacturer's directions.

3.10 CONTROL OF BLEED WATER

A. The presence of bleed water is needed for finishing. A bleed-water versus time curve in accordance with ASTM C 232 shall be submitted for approval before any slab concrete placement. Alternate methods to estimate bleed water shall be reviewed and approved by the ENGINEER.

3.11 FINISHING

A. SEE SECTION 03 35 00 – CONCRETE FINISHING

3.12 CURING

A. See SECTION 03 39 00 – CONCRETE CURING

3.13 PATCHING TIE HOLES

A. See SECTION 03 66 00 – GROUT FOR TIE HOLES

3.14 READY-MIX CONCRETE PRODUCERS SERVICES

A. When requested by the ENGINEER the ready-mixed concrete producer shall provide qualified technical staff to assist in the evaluation of the field performance, placement, consolidation and finishing of the concrete mix.

END OF SECTION

SECTION 03 35 00
CONSTRUCTION JOINTS

PART 1 GENERAL

1.1 WORK INCLUDED

A. Supply all labor, tools, equipment and material for the preparation of construction joints in concrete structures in accordance with these Specifications and as shown in the Drawings.

B. This work includes all construction joints such as slab and wall penetrations, column-footing joints, wall construction joints, column capital-slab joints and footing-slab joints.

C. The location of all construction joints will be subject to the acceptance of the ENGINEER. No horizontal joints are permitted in the walls of water retaining structures.

D. When shown in the Drawings construction joints shall be keyed at right angle to the direction of shear. Except where otherwise shown on the Drawings, keyways shall be at least 1-1/2 inches in depth over at least 25% of the area of the section.

E. Joints shall be spaced to limit the size of each placement to allow for volume change from shrinkage and to minimize the potential of restraint and shrinkage cracking.

F. The size and configuration of all placements shall be reviewed and approved by the ENGINEER.

1.2 QUALITY STANDARDS

A. American Concrete Institute (ACI):

1. ACI 117 - Standard Tolerance for Concrete Construction and Materials
2. ACI 301 - Specifications for Structural Concrete for Buildings
3. ACI 302 - Guide for Concrete Floor and Slab Construction
4. ACI 318 - Building Code Requirements for Structural Concrete

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.1 SURFACE PREPARATION

A. Concrete Surfaces:

1. The surface of concrete construction joints shall be clean and all materials that inhibit bond, such as curing compounds, laitance, saw

dust, wood, dirt, polyethylene, pipe tape coating and paper and standing water shall be removed.

2. Concrete shall be roughened to produce a rough, plus or minus 1/16 inch, surface texture.
3. Concrete surfaces shall be wetted with clean potable water and standing water removed immediately before new concrete is placed.
4. Clean aggregate shall be exposed by abrasive blast cleaning. Wire brushing and air water jets may be used while concrete is fresh provided results are equal to abrasive blast cleaning

3.2 PIPE PENETRATIONS

A. Unless otherwise detailed in Drawings, all pipes penetrating concrete sections such as wall and floor slabs shall have all coatings, such as tape coating or paint and other materials, that can inhibit bond completely removed from the portion of the pipe to be in contact with the concrete.

B. The ground surface shall be smooth and properly graded and compacted. All debris, such as Styrofoam, paper, polyethylene and wood, shall be removed. The ground surface shall be dampened and prepared to prevent the inclusion of dirt, pieces of aggregate or balls of soil in the concrete.

3.3 CONSTRUCTION REVIEW

A. The ENGINEER shall review the preparation of all construction joints prior to concrete placement.

B. It is the responsibility of the CONTRACTOR to notify and provide a minimum of 24 hours notice to the ENGINEER of these activities. If joint placement is performed without the ENGINEER's presence, the work will be deemed unacceptable and non-conforming to these Specifications.

C. If the ENGINEER determines that construction review of a particular activity is unnecessary, he will provide written direction to the CONTRACTOR to proceed with that particular activity without his construction review.

END OF SECTION

SECTION 03 35 10
WST CONCRETE SLABS FINISHING AID

PART 1 GENERAL

1.1 WORK INCLUDED

A. Supply all labor, tools, equipment and material for using a concrete finishing aid for use prior to manual float finish of WST concrete slabs in accordance with these Specifications and as shown in the Drawings.

1.2 REFERENCED STANDARDS

A. American Concrete Institute (ACI):
   1. ACI 117 - Standard Tolerance for Concrete Construction and Materials
   2. ACI 301 - Specifications for Structural Concrete for Buildings
   3. ACI 302 - Guide for Concrete Floor and Slab Construction
   4. ACI 318 - Building Code Requirements for Structural Concrete

1.3 SUBMITTALS

A. Product data sheets
B. MSDS
C. Recommended use and application rates

PART 2 PRODUCTS

2,1 MANUFACTURERS / PRODUCTS

A. Lythic Solutions, Inc. Day1, (360) 694-5347, PO Box 5028, Vancouver, WA, 98668

B. Fritz-Pak Control Finish, (214) 221-9494 4821 Eastover Circle, Mesquite, TX, 75149

PART 3 EXECUTION

3.1 USE OF PRODUCTS

A. Follow the manufacturer's written recommendataions for the use of these products.

END OF SECTION

SECTION 03 36 00
CONCRETE FINISHING

PART 1 GENERAL

1.1 WORK INCLUDED

A. Supply all labor, tools, equipment and materials to finish properly placed concrete.

B. The work includes the repair of concrete that fails to conform to the requirements of this Section.

1. The ENGINEER shall review the CONTRACTOR's means and methods prior to performing repair of improperly placed or finished concrete.
2. Regardless of prior approval of the means and methods of concrete finish repair, no concrete finish shall be repaired until the ENGINEER has reviewed the existing finish. This includes defects caused by ineffective and improper vibration such as honeycomb, excessive air voids on formed surfaces, placement "pour" lines (cold joints) and sand streaking. It also includes defects caused by excessive form deflections, form damage or form failure.

C. Vibrating screed equipment shall be submitted and accepted prior to the slab pre-placement meeting.

D. Unless otherwise called out in the Drawings tie holes shall be finished as specified in SECTION 03 67 00.

E. Also see SECTION 03 66 00.

1.2 QUALITY STANDARDS

A. American Concrete Institute:

1. ACI 116 - Cement and Concrete Terminology
2. ACI 121 - Quality Assurance Systems for Concrete Construction
3. ACI 301 - Specifications for Structural Concrete for Buildings
4. ACI 302 – Guide for Floor and Slab Construction
5. ACI SP-15 - 301 Field Reference Manual
6. ACI 304 - Placing Concrete by Pumping Methods
7. ACI 309 - Identification and Control of Consolidation-Related Surface Defects in Formed Concrete
8. ACI 311 - Guide for Inspection of Concrete

B. American Society for Testing and Materials:

1. ASTM STP 169C, Significance of Tests and Properties of Concrete and Concrete-Making Materials
2. ASTM C 150, Standard Specification for Portland Cement

3. ASTM C 33, Concrete Aggregates

C. US Department of Interior - Bureau of Reclamation (BUREC):

1. M-47 Standard Specifications for Repair of Concrete

1.3 SUBMITTALS

A. General:

1. Submittals shall be made in accordance with SECTION 01 33 00.

B. Submittals:

1. Thermometers for measuring concrete surface temperature
2. Vibrating screed - MBW, Inc., “Screedemon”
3. Placing and finishing tools.
4. Confirmation of specified finishes

C. Manufacturer’s safety data sheets

D. Performance of test panels for concrete finishes

E. A drawing detailing pump location(s), progression of crew placement, testing area, ready mixed concrete truck staging, and wash out areas

1.4 DELIVERY, STORAGE AND HANDLING

A. Deliver the materials to the project site in the manufacturer’s containers with all labels intact and legible at the time of use.

B. Materials shall be stored in a secure, indoor, dry area.

PART 2 PRODUCTS

2.1 VIBRATING SCREEDS

A. Vibrating screeds shall be capable of uniformly consolidating the concrete.

B. The screed bar blade shall be constructed of magnesium.

C. Screed bars up to 16-feet in length shall be powered by a single engine and exciter. Screed bars 20 – 24-feet in length shall be powered by two engines and exciters (heads). 18-foot single head screeds are unacceptable.

D. Products manufactured by MBW, Inc., the “Screedemon”, are acceptable, no other equivalent. Bobcat of the Rockies is the local distributor.

2.2 CONCRETE VIBRATORS

A. Concrete vibrators for consolidating concrete shall be 2 1/2 inch diameter vibrator powered by a 180Hz three-phase “high cycle” motor in the vibrator head with a frequency under load of 8,500 – 12,500 vibrations per minute (vpm).

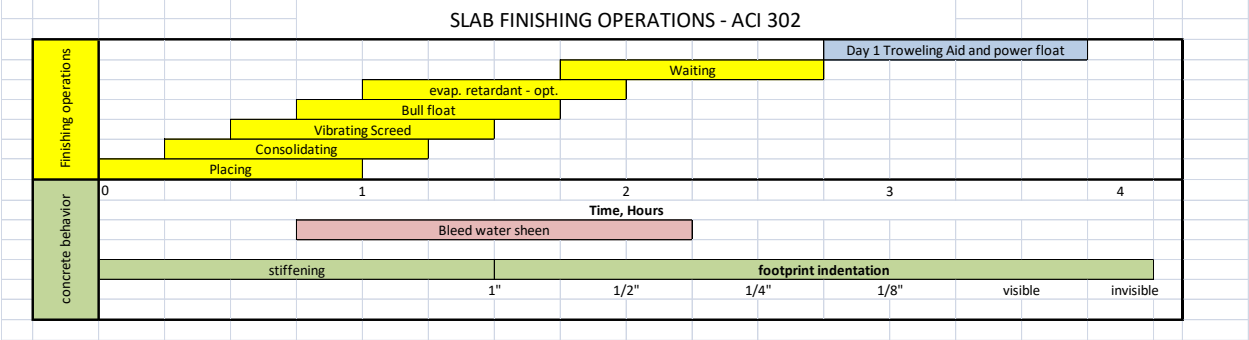
Concrete vibrators of lesser capacity are unacceptable for use in any part of the construction.

B. Have at least one standby concrete vibrator ready for use for every two concrete vibrators in use during a concrete placement.

PART 3 EXECUTION

3.1 GENERAL

A. Finishes called out in the Drawings shall conform to the following table.



Finish No.	Surface Orientation	Finish Description	Exposed To view	Un-exposed To view	Lift Depth (Feet)
1	Vertical	Architectural gloss finish	X		1.0
2		Architectural high-gloss finish	X		1.0
3		Architectural semi-gloss finish	X		1.0
4		Non-architectural semi-gloss finish	X	X	1.5
5		Non-architectural semi-gloss smooth finish	X	X	1.5
6		Non-architectural semi-gloss finish alternate		X	2.0
7		As-cast low-gloss finish		X	2.0
8		As-cast matte finish		X	2.0
9	Horizontal and suspended slabs	Float finish	X	NA	NA
10		Smooth trowel finish	X	NA	NA
11		Broom finish	X	NA	NA
12		Hard-trowel finish	X	NA	NA

B. Place, consolidate, vibrate and, for exposed surfaces, finish normal-weight concrete within a proper time period, neither too early nor too late in the concrete hardening process, during specified environmental conditions including wind, ambient air, materials and form temperatures, and humidity.

1. Place, consolidate and vibrate concrete discharged from a chute, belt or tremie at a rate to eliminate risks of segregation and in specified lifts in forms.
2. Place concrete for slabs at a rate in conformance with specified spreading, vibrating, screeding and floating procedures before bleed water has had an opportunity to collect on the concrete surface.
3. Properly staff placing and finishing operations with due regard for the effects of concrete temperature and atmospheric conditions on the rate of hardening of the concrete to avoid defects and cold joints. If the

CONTRACTOR lacks proper staffing, the placement shall be postponed and re-scheduled to a time when adequate staffing will permit proper placing and finishing operations.

4. If unacceptable environmental conditions occur with the risk of defects, cold joints or non-conforming work, take action to mitigate the conditions to bring the work into compliance with this and referenced Specifications.
5. Have proper equipment to perform the work in conformance with the Specifications. Also, have sufficient stand-by equipment, including generators and vibrators, so that in the event of equipment failure, proper placing and finishing operations can continue.
6. Slab placing finishing operations shall comply with the following illustration.

3.2 PLACING

A. Plan for and coordinate proper placing, finishing and curing operations and conduct a pre-placement meeting. Advance planning shall include issues such as, time of placement, duration of placement, access to and around the site, rates of concrete delivery, crew sizes, approved concrete mixes, number of active and stand-by concrete pumpers and capacities, placing sequences, finishing equipment and procedures in consideration of anticipated environmental conditions, testing procedures, means of curing and maintenance of curing procedures.

B. All concrete handling procedures shall be performed to eliminate the risk of segregation. Regardless of the method of discharge the concrete shall be deposited as near as possible to its final position and toward previously placed concrete.

C. Monitor the setting of concrete to avoid defects and cold joints.

D. Place concrete in walls in lift depths specified herein or shown on the drawings. Monitor lift depths by measuring the depth of concrete in, or by sounding, the formwork.

3.3 SPREADING AND CONSOLIDATING

A. Spread the concrete to avoid segregation and consolidate the concrete by proper vibration that conforms to this and referenced Specifications. Do not spread concrete by vibration.

B. Vibrating concrete in walls shall be properly performed to consolidate concrete along lift lines. Vibrating procedures shall conform to this and referenced Specifications.

C. Use a vibrating screed on slabs-on-grade and suspended slabs to strike of the concrete lying above the desired plane and grade of the concrete. A rigid metal screed may be used when the grade is too steep for a mechanical vibrating screed. Wood screeds shall not be used unless otherwise accepted by the ENGINEER during the submittal process.

D. Limit placement strip widths and lengths using wet screeds or formwork to facilitate placement operations, to eliminate the risk of cold joints and other defects and reduce the effects of shrinkage including cracking.

3.4 FINISHING

A. General:

1. All finishes shall be uniform. Finishes that lack uniformity as determined by the ENGINEER shall be repaired to produce a uniform appearance. Maintain the formwork, including application of form release agents and reconditioning formwork to provide a uniform finish.
2. Meet the finishes required. Construct test panels and place concrete to confirm conformance with the requirements of this Specification unless otherwise determined to be unnecessary by the ENGINEER during the submittal process. Test panels shall be sufficiently sized to permit an evaluation of the form system and finishes by the ENGINEER and OWNER.
3. Coordinate the formwork systems found in SECTION 03 11 13, and selecting the formwork to meet finish requirements.

B. Straightedging:

1. If requested by the ENGINEER, straightedge the concrete surface to cut and fill the concrete surface to achieve the proper surface flatness particularly along joints.
2. The straightedge shall be used at a 45-degree angle to axis the strip of joint, overlapping the previous work by 50% of the straightedge length. The straightedge shall be used in two directions perpendicular to each other to produce a flatter smoother slab.

C. Edging and Jointing:

1. Edging shall only be performed when noted in the Drawings.

2. Jointing shall be performed to create contraction joints shown in the Drawings.
3. Jointing shall not be performed if the floor slab is to be covered by hard or soft tile.
4. The jointing tool shall have a bit deep enough to cut grooves 1/4 the slab thickness. The jointer shall have a 1/8-inch radius for floors. Use a straight one x eight-inch or one x ten-inch board as a guide when making the joint in the concrete slab.
5. As an alternative to jointing, especially with slabs over 5-inches in thickness, saw cut joints or preformed joints are permitted.
6. Edging and jointing shall be performed prior to floating.
7. Joints shall be cut in slabs using either the early entry, using a diamond dry-process saw, or conventional, wet-process saw, four hours in hot weather to 12 hours in cold weather after the slab has been finished. The saw cut shall be 1/4 the slab thickness or a minimum of one-inch using a wet process saw and one-inch minimum for a dry-process saw for slabs up to nine-inches in thickness.

D. Floating:

1. Use wood or magnesium bull-floats and hand floats to smooth the concrete surface and eliminate ridges and fill in voids left by screeding operations. The floating process shall compact and consolidate the concrete surface to embed the coarse aggregate slightly and “close” the concrete surface. Tearing the concrete surface is unacceptable.
2. Initial “bull” floating shall be performed immediately after screeding and completed before any excess moisture or bleed water is present on the surface.
3. Floating shall remove marks left by edging and jointing.

E. Troweling:

1. Impart a smooth relatively hard and dense surface to the concrete by troweling. This work includes using hand trowels, Fresno trowels and power trowels, when permitted by the ENGINEER. Power troweling shall be reviewed and approved in writing by the ENGINEER during the submittal process. Power troweling will not be permitted for concrete slabs containing fly ash.
2. Washboard or chatter surfaces are unacceptable.
3. Troweling shall be kept to a minimum to obtain the desired surface, especially during hot, dry and windy weather conditions in order to permit curing to commence.

F. Brooming:

1. Brooming shall impart a scored surface by drawing a soft-bristled broom across the surface.

2. Brooming shall be performed after floating and excess moisture has left the surface.

3.5 FINISHES

A. Architectural Finishes:

1. The form facing material shall produce a smooth, hard, uniform texture on the concrete. Wood grain transfer to the concrete shall be minimal.
2. The arrangement of the facing material shall be orderly and symmetrical, with the number of seams kept to the practical minimum.
3. As determined by the ENGINEER, unacceptable surface textures that result from forms with raised grain, torn surfaces, worn edges, patches, dents, or other defects shall be ground smooth or otherwise repaired.
4. Air voids shall be limited to 25% of that shown in Figure 1.
5. Form “fins” are unacceptable.

B. Non-architectural Finishes:

1. The form facing material shall produce a smooth, hard, uniform texture on the concrete. Wood grain transfer to the concrete can be slight to moderate depending on the finish required. See SECTION 03 11 13.
2. The arrangement of the facing material shall be orderly and symmetrical, with the number of seams kept to the practical minimum.
3. As determined by the ENGINEER unacceptable surface textures that result from forms with excessive raised grain, torn surfaces, worn edges, patches, dents, or other defects shall be ground smooth or otherwise repaired.
4. Air voids shall be limited to the requirements shown in Figure 1.
5. Form “fins” less than 1/16-inch are acceptable. Chip or rub-off form fins exceeding 1/16 inch in height.

C. As-cast Finishes:

1. The form facing material shall produce a smooth, hard, uniform texture on the concrete. Wood grain transfer to the concrete can be moderate to heavy depending on the finish required. See SECTION 03 11 13.
2. The arrangement of the facing material shall be orderly and symmetrical, with the number of seams kept to the practical minimum.
3. As determined by the ENGINEER, unacceptable surface textures that result from forms with torn surfaces, worn edges, patches, dents, or other defects shall be repaired.
4. Air voids shall be limited to the requirements shown in Figure 1.
5. Form “fins” less than 1/4-inch are acceptable. Chip or rub-off form fins exceeding 1/4 inch in height.

D. Horizontal (Slabs on Ground) and Suspended Slab Finishes:

1. Broom the surface of slabs, walks and stairways exposed to weather or water in the case of water retaining structures interior floor slabs.
2. All other slabs shall have a smooth steel trowel finish.
3. Slab Defects that shall be repaired include (See 302.1R, Chapter 11) but not be limited to include:
    a. Cracks wider than permitted by the Specifications or that cause seepage in water retaining structure.
    b. Low wear resistance. See 302.1R, 11.3.
    c. Dusting
    d. Scaling
    e. Mortar flaking
    f. Popouts
    g. Blisters and delaminations
    h. Spalling
    i. Discoloration
    j. Low spots and poor drainage
    k. Curling
    l. Ridges from power troweling
    m. “gouges” from non-uniform brooming

E. Rubbed Finish:

1. Rubbed finishes shall only be utilized for Finish No. 3 – Architectural semi-gloss finishes and where called out in the Drawings.
2. Immediately after removing the forms, form ties shall be broken back a minimum of 3/4 inch from the surface, honeycomb, voids and other surface defects grouted products reviewed and accepted by the ENGINEER. See SECTION 01 33 00.
3. The surfaces shall be thoroughly dampened and rubbed with a No. 16 carborundum stone or equal abrasive to create a uniform surface paste. The rubbing shall be continued to remove all form marks and surface irregularities producing a smooth, dense surface.
4. After setting, the surface shall then be rubbed with a No. 30 carborundum stone until the surface is smooth in texture and uniform in color.
5. Rubbed finish work on surfaces exposed to view shall not be performed on water retaining structures, such as tanks, until after the watertightness test is completed.

F. Air Voids on Formed Surfaces:

1. Air voids on formed surfaces deeper than 1/4 inch shall be filled with patching mortar.
2. The frequency and size of air voids shall be equal to or better than shown in Figure 1. The total void area is 1% of the surface area, or 0.36 sq. in. This 6-inch x 6-inch figure is the visual standard for acceptance of the finish that does not require filling of air voids.

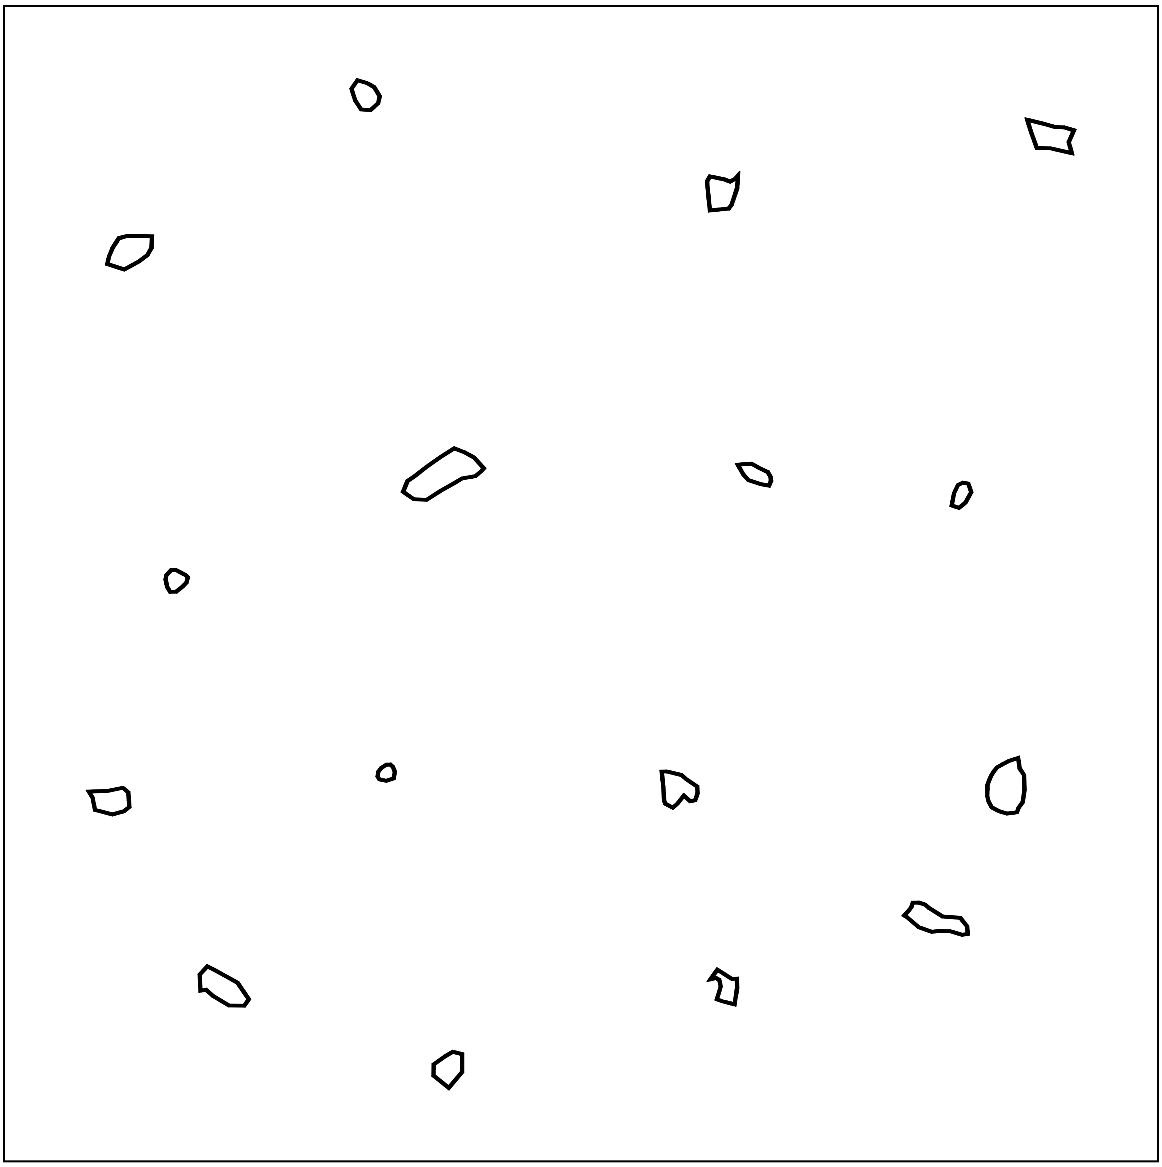


FIGURE 1

G. Tie Holes

1. Tie holes shall be filled as specified in SECTION 03 66 00.

3.6 PLASTIC SHRINKAGE CRACK REPAIR DURING FINISHING

A. If during finishing plastic shrinkage cracks appear, rework the surface to close the crack by re-floating the surface.

B. Do not add additional water or evaporative retardant to the surface of the concrete during re-floating.

3.7 POST PLACEMENT CRACK REPAIR

A. Repair cracks $\geq$ 0.005 inches wide as measured by the ENGINEER.

B. All cracks regardless of width in walls or slabs that separate potable from non-potable water in water retaining structures shall be repaired, including water retaining structure floor and roof slabs.

C. Crack widths shall be measured using a crack comparator gauge.

3.8 WATERPROOFING

A. Walls of below grade structures such as pump stations and valve vaults shall be waterproofed in addition to the specified finish. Water retaining structure walls shall not be waterproofed unless otherwise called out in the drawings.

B. See SECTION 07 10 00.

END OF SECTION

SECTION 03 36 00
CONCRETE FINISHING

SUPPLEMENT

FINISH SCHEDULE

Structure component	Finish No.	Comments
Floor slab	11	
Vertical edge of footing / slab	8	
Vertical edge of column footing	3	Rubbed Finish
Top of wall footing under wall	10	Finish applies to width of wall
Top of Column Footing	11	
OF Wall	6	
IF Wall	6	
Columns	6	
Top of wall	10	
Top of roof slab	11	
Concrete hatch pedestals	3	Rubbed finish OF only

SECTION 03 39 00
CONCRETE CURING

PART 1 GENERAL

1.1 WORK INCLUDED

A. Furnish all labor, tools and equipment for curing cast-in-place concrete in accordance with referenced documents and applicable specifications.

B. Methods for curing concrete contained herein represent the minimum work required. Perform curing to obtain the specified concrete finish. Not all means and methods that could be used are contained herein.

1.2 QUALITY STANDARDS

A. American Concrete Institute (ACI)

1. ACI 305 - Hot Weather Concreting
2. ACI 306 - Cold Weather Concreting
3. ACI 308 - Standard Practice for Curing Concrete

B. American Society for Testing Materials (ASTM)

1. ASTM C 171 - Sheet Materials for Curing Concrete
2. ASTM C 309 - Liquid Membrane-Forming Compounds for Curing Concrete
3. ASTM D 2103 - Polyethylene Film and Sheeting
4. ASTM D 882 - Test Methods for Tensile Properties of Thin Plastic Sheeting
5. ASTM D 883 - Terminology Related to Plastics

C. Corps of Engineers (CRD)

1. CRD-300, Specifications for Membrane-Forming Compounds for Curing Concrete.

1.3 SUBMITTALS

A. Submittal for Review

1. Product Data
   a. Evaporation retardant
   b. Curing compounds
   c. Sheet and blanket materials
   d. Curing plan

2. Shop Drawings: show curing methods proposed

B. Quality Control Submittals

1. Manufacturer's Certificate of Compliance showing moisture retention.

1.4 QUALITY CONTROL

A. Perform the work in accordance with this Specification and in accordance with applicable ACI standards.

B. When a conflict between this Specification and ACI occurs, the ACI standard shall control.

C. Keep a copy of the current applicable ACI standards on site.

D. All materials shall be used in accordance with the manufacturer's printed instructions, a copy of which shall be on site.

1.5 DELIVERY, STORAGE AND HANDLING:

A. Deliver, store and handle products under the provisions of the Specifications.

B. Deliver curing materials in manufacturer's original packaging including applicable instructions and manufacturer's safety data sheets (MSDS).

PART 2 PRODUCTS

2.1 WHITE-BURLAP-POLYTHYLENE SHEET)

A. White burlap-polyethylene sheeting, known as burlene, with burlap weighing not less than 10 oz/linear yard, and polyethylene 0.004 inches thick, 40 inches wide, conforming to ASTM D 2103. The polyethylene be securely bonded to the burlap so that there will be no separation.

B. The polyethylene shall also conform to ASTM D 882 and D 883.

2.2 LIQUID MEMBRANE-FORMING COMPOUNDS FOR CURING CONCRETE

A. Liquid membrane-forming compounds for curing concrete shall and conform to ASTM C 309, Type 2 (white pigmented), Class B as defined by ASTM D 883 (resin based) and CRD C-300.

B. The membrane film shall also conform to CRD-300 which permits a maximum unit moisture loss through the membrane of 0.030 grams per cm^2 after seven days exposure to a 10-mph current of air at 100° F and a 30% R.H when applied at 200 sq. ft. per gal.

B. Liquid membrane-forming curing compounds shall be a resin-based white-pigmented solvent with a minimum of 20% solids.

C. The product shall exhibit a daylight reflectance of not less than 60% of that of magnesium oxide.

D. Approved manufacturers and products (no equivalents)

1. US Spec Maxcure Resin White HS.

2.3 SINGLE USE WET CURING BLANKET

A. Moisture-retaining covering, natural colored, non-staining cellulose fabric with an opaque and impervious coating applied to one side that is a non-perforated and reflective vapor barrier, which provides UV protection.

B. Approved manufacturers and products

1. SIKA® UltraCure NCF™ or equivalent

C. The single use blanket is for use on horizontal surfaces only.

2.6 EVAPORATIVE RETARDANT

A. Sources

1. Confilm by Master Builders, Inc.
2. Eucobar by Euclid Chemical Co..

B. Use

1. Use only with written approval.

2.7 WATER

A. Only water that has been determined to be non-detrimental to concrete shall be used.

PART 3 EXECUTION

3.1 GENERAL

A. Cure concrete in accordance with ACI 305, 306 and 308.

B. Submit alternate products and methods to those specified for the ENGINEER's review and evaluation.

C. Beginning immediately after placement, all concrete shall be protected from premature drying, excessively hot or cold temperatures, and mechanical injury. The concrete shall be maintained with minimal moisture loss at a relatively constant temperature for the period necessary for hydration of the cement and hardening of the concrete in accordance with ACI 308, "Standard Practice for Curing Concrete".

D. The maximum temperature differential between the surface of the concrete and air temperature shall be 25° F.

E. Curing shall be continued for at least seven days. Alternatively, moisture retention measures may be terminated when the average compressive strength has reached 70% of the specified concrete strength. Formwork shall remain in place at least three days unless it can be shown the formwork can be safely removed without damage to the concrete and permit the application of curing products

F. Monitor the concrete temperature several times a day to assure that proper curing conditions are maintained.

1. Remove blankets, burlene or other curing membranes in several locations to monitor both moisture and temperature conditions at least four times in a 24 hour time period.

3.2 EVAPORATION CONTROL DURING CONCRETE PLACEMENT

A. Utilize a recording thermometer, hygrometer and wind gage on site seven days prior to first concrete placement.

B. Precautions against plastic shrinkage cracks may be required in conditions other than what is normally considered hot weather conditions.

C. If the rate of evaporation approaches 0.10 lb/ft^2/hr precautions against plastic shrinkage cracking are required. See SECTION 03 30 00.

D. The effect of concrete and air temperatures, relative humidity and wind velocity on the rate of evaporation of surface moisture from concrete shall be estimated throughout a placement using the following Figure 1, taken from ACI 308. When the evaporation rate exceeds 0.10 lb/ft^2/hr the use of an evaporative control measures are required and shall be used throughout the remainder of the placement.

E. Alternative means of reducing evaporation to an acceptable level shall be submitted for review and acceptance. Provisions for alternates, or in addition, to evaporative retardants including windbreaks and shading, shall be made in advance of placement, and such protective measures shall be taken as quickly as concrete hardening and finishing operations will allow.

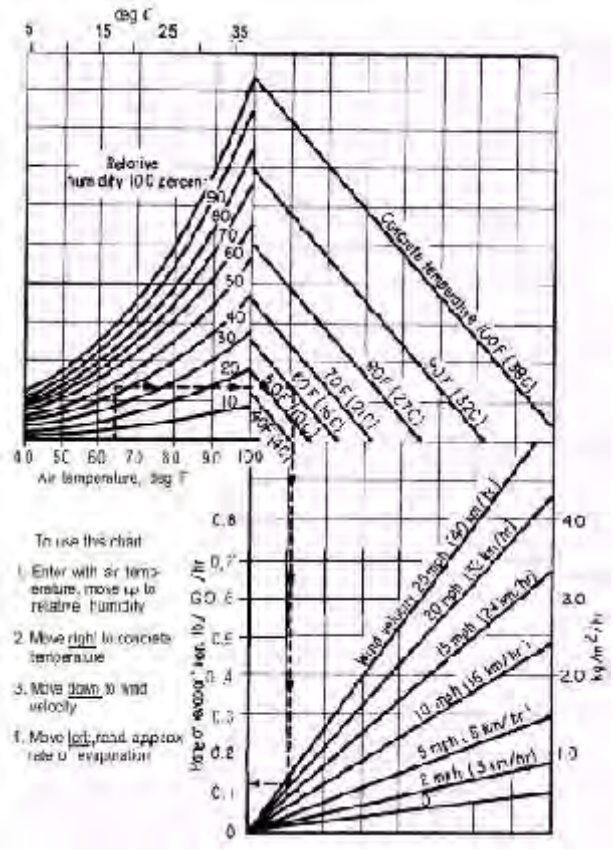

Figure 1

F. Apply retardant in strict conformance with the manufacturer's recommendations and precautions.

G. In no case shall the retardant be used as a finishing agent or worked into the concrete as part of the finishing operation.

H. Use of an evaporative retardant requires review and approval by the ENGINEER.

3.3 LIQUID MEMBRANE-FORMING CURING COMPOUNDS

A. Rate of Application

1. Apply at a maximum rate, R, of 200 sq. ft. square feet per gallon. The 200 square feet per gallon application rate is the sum for two coats of curing compound.
2. Apply as soon as the surface water has dissipated and the concrete has been finished or formwork removed.
3. When a spray applied membrane-curing compound is used, it shall be applied in two coats with the second coat applied at right angles to the first coat with a one-hour, or more for a proper applicataion, interval between coats.

B. Demonstrate that the proper application rate is being applied by applying a known quantity of product to a measured test area. The test area shall be used as a visual reference for the remainder of the surface.

C. Follow manufacturer's directions.

1. Do not use material that has frozen.
2. Do not mix with other chemicals or alter in any way.

D. Apply in accordance with the recommendations of the manufacturer immediately after any water sheen that may develop after finishing has disappeared from the concrete surface.

E. After the curing period is complete, thoroughly remove curing compounds using mechanical abrasive measures such as a sand or grit blast as recommended by the manufacturer. prior to placing concrete to the slab, such as walls on slabs, to promote proper bond of concrete to concrete. It shall be removed from all remaining surface areas after 7 days or when the concrete reaches 70% of the mix design strength.

F. Discharge of water from a concrete surface cured with a liquid membrane forming curing compound and off the site may require a permit and treatment to meet water quality criteria. Acquire any permit required to treat and discharge water used for curing.

3.4 FLOOR AND ROOF SLABS AND OTHER CONCRETE FLAT WORK

A. Water retaining and other structure slabs ≥ 3,000 SF

1. All slabs shall be cured using a single-use wet curing blanket

B. Water retaining and other structure slabs < 3,000 SF

1. All slabs shall be cured with a liquid membrane forming, burlene or single-use wet curing blanket.

2. Apply products in accordance with manufacturer's recommendations.
3. Maintain moisture beneath burlap or blanket

3.5 WALLS AND COLUMNS

A. Moisture loss from surfaces placed against wooden or metal forms exposed to heating by the sun shall be minimized by keeping the forms wet until they can be safely removed. After form removal, the concrete shall be cured until the end of the curing time by one of the previously described curing methods. excluding the

B. After the curing period is complete, thoroughly remove membrane curing compounds using mechanical abrasive measures, such as a sand or grit blast as recommended by the manufacturer, prior to placing concrete to promote proper bond of concrete to concrete or adherence on non-concrete items, such as sheet neoprene, to the top of walls.

C. The top of walls and columns not covered by forms shall be cured using a membrane-curing compound, burlene or single use blankets.

3.6 OTHER SURFACES

A. Unless otherwise shown in the Drawings all other surfaces shall be cured using two applications of a membrane-curing compound conforming to ASTM C 309.

3.7 COLD WEATHER

A. Curing during cold weather conditions measures shall be taken to prevent freezing of water used in burlene and single use blankets.

3.8 RATE OF TEMPERATURE CHANGE

A. Changes in temperature of the air immediately adjacent to the concrete during and immediately following the curing period shall be kept as uniform as possible and shall not exceed 5° F in any one hour or 50° F in any 24-hour period.

3.9 PROTECTION FROM MECHANICAL INJURY

A. During the curing period, the concrete shall be protected from damaging mechanical disturbances, such as load stresses, heavy shock, and excessive vibration.

B. All finished concrete surfaces shall be protected from damage by construction equipment, materials, or methods, by application of curing procedures, and by rain or running water.

C. Self-supporting structures shall not be loaded in such a way as to overstress the concrete.

4.0 FAILURE TO PROPERLY CURE CONCRETE

A. If, in the opinion of the ENGINEER, the curing methods do not meet provisions of this specification, immediately revise or supplement the means of curing concrete. The ENGINEER shall review and approve the revised plan.

B. If, in the opinion of the ENGINEER, the CONTRACTOR fails to modify the curing methods to achieve an acceptable cure, the section will be subject to immediate rejection.

END OF SECTION

SECTION 03 66 00
GROUT FOR TIE HOLES

PART 1 GENERAL

1.1 WORK INCLUDED

A. Furnish all labor, tools and equipment for the placement of grout in reservoir form tie holes as shown on the Drawings and specified herein.

B. This Section includes basic mixing, application, and curing methods for one component, cement-based, chloride-resistant, flowable surface renovation grout.

C. Have a printed set of manufacturer's recommendations for product use on site for review during preparation, mixing and application of grouts.

1.2 QUALITY STANDARDS

A. American Society for Testing Materials (ASTM):

1. C 78 - Test Method for Flexural Strength of Concrete (Using Simple Beam with Third-Point Loading.
2. C 109 - Test Method for Compressive Strength of Hydraulic Cement Mortars – Modified.
3. C 469 - Test Method for Static Modulus of Elasticity and Poisson's Ratio of Concrete in Compression.
4. C 666 - Test Method for Resistance of Concrete to Rapid Freezing and Thawing.
5. C 882 - Test Method for Bond Strength of Epoxy Resin Systems used with Concrete – Modified.
6. C 1012 -Test Method for Length Change of Hydraulic Cement Mortars Exposed to Sulfate Solution – Modified.
7. C 1202 - Electrical Indication of Resistance to Chloride Ion Penetration.

1.3 SUBMITTALS

A. Product Data:

1. Cement Based Repair Grout.
2. Evaporative Retardant Films.
3. Curing Compounds.
4. Form Release Agents.
5. Bonding Agents.
6. Vibrator Specifications.
7. Sheet Materials for Curing Concrete.

1.4 QUALITY ASSURANCE

A. Field Tests:

1. When the ENGINEER is to perform grout testing, the CONTRACTOR shall assist the ENGINEER or his concrete testing consultant as requested during the performance of quality control testing. When mortar is placed using a pump, mortar for testing will be taken from the pumper discharge hose.
2. When prescribed in the Drawings or by these Specifications, length change test specimens will be taken during construction from the first placement of each type of mortar, and at intervals thereafter as selected by the ENGINEER to ensure continued compliance with these Specifications. Unless otherwise specified on the Drawings or Specifications the testing will be performed by the ENGINEER.
3. When required length change tests and fabrication of specimens for cement based mortar will be performed as specified in ASTM C 1012 at intervals during construction as selected by the ENGINEER. A set of three specimens will be made for testing at 7 and 28 days.
4. All mortar, already placed, that fails to meet the requirements of this Specification, is subject to removal and replacement at the cost of the CONTRACTOR.
5. Unless otherwise specified in the Drawings or Specifications, the cost of all laboratory tests on grout will be borne by the OWNER, but the CONTRACTOR shall assist the ENGINEER in obtaining specimens for testing. However, the CONTRACTOR shall be charged for the cost of any additional tests and investigation on work performed which does not meet the Specifications.

B. Construction Tolerances:

1. The grout shall be placed within ±1/16 inch of the surface of the surrounding concrete.

1.5 DELIVERY, STORAGE AND HANDLING

A. Cement based mortar shall be delivered and stored in manufacturer's packaging until it is ready to be mixed and placed.

B. Mortar bags shall be stored off the ground and protected from water and all other substances that will penetrate packaging.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS/PRODUCTS

A. Master Builders Technologies:

1. EMACO S88-CI.
2. EMACO S66-CR.
3. MB 429, Masterkure CR, Masterkure 200W or Masterkure 100W - curing compounds.

B. No Substitutes.

2.2 MORTAR FOR PATCHING TIE HOLES

A. EMACO S88-CI.

2.3 MORTAR FOR PATCHING DEEP TIE HOLES ≥ 1-1/2 INCHES DEEP

A. EMACO S66-CR (aggregate extended).

2.4 BONDING ADHESIVES

A. Concresive Liquid LPL or Concresive Standard Liquid.

2.5 EVAPORATION REDUCER

A. Confilm, Master Builders, Inc.

B. Monofilm, ER US Spec.

2.6 WATER

A. Only clean potable water shall be used.

B. A calibrated measuring device is required for measuring the proper amount of water to be added to grouts and mortars.

2.7 CURING COMPOUND

A. MB 429, Masterkure 100W, Masterkure 200W.

PART 3 EXECUTION

3.1 GENERAL

A. These grouts contain admixtures that increase grout strength and workability. The strength and performance of the grout is dependent on proper surface preparation, grout mixing and curing.

B. The CONTRACTOR shall be required to use a calibrated measuring device to add clean potable water to the grout mix. Water added to a grout mix without a calibrated device is cause for grout rejection, removal and re-placement.

C. Curing is critical to prevent shrinkage cracks that can develop with grouts containing some admixtures. Curing shall begin immediately after placement.

D. All mixing, surface preparation, handling, placing, consolidation, and other means of execution for pre-packaged mortars shall be done according to the instructions and recommendations of the manufacturer and this Specification.

E. In the event that a conflict occurs between this Specification and manufacturer's instructions, the manufacturer's instructions shall prevail in all cases.

3.2 GROUTING

A. Preparation:

1. Thoroughly clean surfaces and anchorage steel of rust, dirt, loose chips, and dust.
2. Maintain substrate in a saturated, surface-dry condition.
3. Do not apply unless the surface temperature of the concrete is a minimum of 40°F.

B. Mixing for S88-CI:

1. Mixing using a mortar (paddle-type) mixer is recommended, however a Jiffler mixer with a slow speed drill (400/600-rpm) is acceptable for small batches.
2. Enough water shall be added to the mixing container to obtain a slump of four (minimum) to six inches (maximum) (approximately 0.5 gallon per bag).
3. Do not exceed water quantity shown in manufacturer's instructions.
4. Add contents of bag to the container while continuing to mix to a uniform consistency. Mixing time shall not exceed five minutes.

C. Mixing for S66-CR:

1. Mechanical mixing using a mortar (paddle-type) mixer is required. However, a Jiffler mixer or a slow speed drill (400-600 rpm) may be used for small batches.
2. Add enough water to the mixing container to obtain a minimum slump of four inches, maximum slump of six inches (approximately 0.5 gallon per bag).
3. Add the contents of the bag to the container while continuing to mix.
4. Mix to a uniform consistency
5. Typical mixing time is three to five minutes. Do not mix longer than five minutes.

D. Application:

1. Apply bonding adhesive.
2. Place and finish with trowel or screed.
3. In hot, windy, or dry conditions, where rapid surface evaporation may occur, use evaporation reducer.

E. Curing:

1. Apply curing compound in accordance with label instructions as soon as the surface cannot be marred by the application.
2. Protect the grout from freezing and maintain at a temperature ≥50°F.

END OF SECTION

SECTION 03 67 00
GROUT FOR POST-TENSIONING (PT) ANCHORAGE POCKETS

PART 1 GENERAL

1.1 WORK INCLUDED

A. Furnish all labor, tools and equipment for the placement of grout in post-tensioning anchorage pockets as shown on the Drawings and specified herein.

B. This Section includes basic mixing, application, and curing methods for one component, cement-based, chloride-resistant, flowable surface renovation grout.

C. Have a printed set of manufacturer's recommendations for product use on site for review during preparation, mixing and application of grouts.

1.2 QUALITY STANDARDS

A. American Society for Testing Materials (ASTM):

1. C 78 - Test Method for Flexural Strength of Concrete (Using Simple Beam with Third-Point Loading
2. C 109 - Test Method for Compressive Strength of Hydraulic Cement Mortars - Modified
3. C 469 - Test Method for Static Modulus of Elasticity and Poisson's Ratio of Concrete in Compression
4. C 666 - Test Method for Resistance of Concrete to Rapid Freezing and Thawing
5. C 882 - Test Method for Bond Strength of Epoxy Resin Systems used with Concrete - Modified
6. C 1012 -Test Method for Length Change of Hydraulic Cement Mortars Exposed to Sulfate Solution - Modified
7. C 1202 - Electrical Indication of Resistance to Chloride Ion Penetration

1.3 SUBMITTALS

A. Product Data:

1. Cement Based Repair Grout.
2. Evaporative Retardant Films.
3. Curing Compounds.
4. Form Release Agents.
5. Bonding Agents.
6. Vibrator Specifications.
7. Sheet Materials for Curing Concrete.

1.4 QUALITY ASSURANCE

A. Field Tests:

1. When the ENGINEER is to perform grout testing, assist the ENGINEER or his concrete testing consultant as requested during the performance of quality control testing. When mortar is placed using a pump, mortar for testing will be taken from the pumper discharge hose.
2. When prescribed in the Drawings or by these Specifications, length change test specimens will be taken during construction from the first placement of each type of mortar, and at intervals thereafter as selected by the ENGINEER to insure continued compliance with these Specifications. Unless otherwise specified on the Drawings or Specifications the testing will be performed by the OWNER or testing representative.
3. When required length change tests and fabrication of specimens for cement based mortar will be performed as specified in ASTM C 1012 at intervals during construction as selected by the ENGINEER. A set of three specimens will be made for testing at 7 and 28 days.
4. All mortar, already placed, that fails to meet the requirements of this Specification, is subject to removal and replacement at the cost of the CONTRACTOR.
5. Unless otherwise specified in the Drawings or Specifications, the cost of all laboratory tests on grout will be borne by the OWNER, but the CONTRACTOR shall assist the ENGINEER in obtaining specimens for testing. However, the CONTRACTOR shall be charged for the cost of any additional tests and investigation on work performed which does not meet the Specifications.

B. Construction Tolerances:

1. The grout shall be placed within ±1/16 inch of the surface of the surrounding concrete.

1.5 ACCEPTABLE MANUFACTURERS/PRODUCTS

A. Master Builders Technologies:

1. EMACO S88-CI.
2. EMACO S66-CR.
3. MB 429, Masterkure CR, Masterkure 200W or Masterkure 100W - curing compounds.

B. No substitutes.

1.6 DELIVERY, STORAGE AND HANDLING

A. Cement based mortar shall be delivered and stored in manufacturer’s packaging until it is ready to be mixed and placed.

B. Mortar bags shall be stored off the ground and protected from water and all other substances that will penetrate packaging.

PART 2 PRODUCTS

2.1 MORTAR FOR PATCHING ANCHORAGE HOLES ≤ 1-1/2-INCHES DEEP

A. EMACO S88-CI.

2.2 MORTAR FOR PATCHING PT ANCHORAGE POCKETS > 1-1/2-INCHES DEEP

A. EMACO S66-CR (aggregate extended).

2.3 BONDING ADHESIVES

A. Concresive Liquid LPL or Concresive Standard Liquid.

2.4 WATER

A. Only clean potable water shall be used.

B. A calibrated measuring device is required for measuring the proper amount of water to be added to grouts and mortars.

2.5 CURING COMPOUND

A. MB 429, Masterkure 100W, Masterkure 200W.

PART 3 EXECUTION

3.1 GENERAL

A. These grouts contain admixtures that increase grout strength and workability. The strength and performance of the grout is dependent on proper surface preparation, grout mixing and curing.

B. The CONTRACTOR shall be required to use a calibrated measuring device to add clean potable water to the grout mix. Water added to a grout mix without a calibrated device is cause for grout rejection, removal and re-placement.

C. Curing is critical to prevent shrinkage cracks that can develop with grouts containing some admixtures. Curing shall begin immediately after placement.

D. All mixing, surface preparation, handling, placing, consolidation, and other means of execution for pre-packaged mortars shall be done according to the instructions and recommendations of the manufacturer and this Specification.

E. In the event that a conflict occurs between this Specification and manufacturer's instructions, the manufacturer's instructions shall prevail in all cases.

3.2 GROUTING

A. Preparation:

1. Thoroughly clean surfaces and anchorage steel of rust, dirt, loose chips, and dust.
2. Maintain substrate in a saturated, surface-dry condition.
3. Do not apply unless the surface temperature of the concrete is ≥ 40°F.

B. Mixing for S88-CI:

1. Mix using a mortar (paddle-type) mixer is recommended, however a Jiffler mixer with a slow speed drill (400/600-rpm) is acceptable for small batches.
2. Enough water shall be added to the mixing container to obtain a slump of four (minimum) to six inches (maximum) (approximately 0.5 gallon per bag).
3. Do not exceed water quantity shown in manufacturer's instructions.
4. Add contents of bag to the container while continuing to mix to a uniform consistency. Mixing time shall not exceed five minutes.

C. Mixing for S66-CR:

1. Mechanical mixing using a mortar (paddle-type) mixer is required. However, a Jiffler mixer or a slow speed drill (400-600 rpm) may be used for small batches.
2. Add enough water to the mixing container to obtain a minimum slump of four inches, maximum slump of six inches (approximately 0.5 gallon per bag).
3. Add the contents of the bag to the container while continuing to mix.
4. Mix to a uniform consistency
5. Typical mixing time is three to five minutes. Do not mix longer than five minutes.

D. Application:

1. Apply bonding adhesive.
2. Place and finish with trowel or screed.
3. In hot, windy, or dry conditions, where rapid surface evaporation may occur, use Confilm Evaporation Reducer.

E. Curing:

1. Apply curing compound in accordance with label instructions as soon as the surface cannot be marred by the application.
2. Protect the grout from freezing and maintain at a temperature ≥ 50°F.

END OF SECTION

SECTION 03 80 00
AWWA D115 PRESTRESSED CONCRETE TANKS WITH "W" DRAPED CIRCUMFERENTIAL WALL TENDONS

PART 1 GENERAL

1.1 WORK INCLUDED

A. Furnish all labor, tools and equipment for the construction of prestressed concrete water storage tanks (WSTs) as shown on the Drawings and as herein specified.

B. The CONTRACTOR is required to self-perform the construction of the wall including formwork erection, wall concrete placement and the roof slab formwork.

C. Prepare and submit a floor and roof slab placement plan for the ENGINEER's review and approval. The plan shall detail the specifics of the placement such as, positioning of the pumpers, number of crews, staff per crew, foremen, configuration of screeds relative to the slab area, ability to meet the specified time for the slab placements and sufficient fogging equipment for the probable placement conditions. See 03 36 00 – CONCRETE FINISHING

D. A friction test is required on the first floor slab, wall, and roof slab tendons to confirm that the wall prestressing designed provides stress equal to or greater than the stress measured in the field. See SECTION 03 23 40.

1.2 GENERAL

A. Rubber tired vehicles are not permitted on the tank floor slab unless it can be demonstrated that rubber from the vehicle tires will not "mark" the concrete. Any marking that occurs regardless of source shall be thoroughly removed. Any vehicles used on the slab shall be "diapered" to prevent any fluids, such as oil or hydraulic fluid, from coming in contact with the slab.

B. Do <u>not</u> use paint or other marking systems, such as crayon, on inside tank surfaces. The ENGINEER will require the thorough removal of <u>any</u> paint or crayon that is used. Appropriate testing and lab analysis of the concrete will be required by the OWNER after removal of the paint or marking to ensure that the concrete is not contaminated. These tests will be performed by an accredited lab at the CONTRACTOR's expense. The results of the tests shall be provided to the OWNER.

C. Drilled inserts or concrete nails shall not be used in the concrete floor slab or top of column footings inside the tank to anchor formwork and formwork braces. Deadmen or other non-destructive means shall be used to support and brace formwork.

D. Keep a steel pipe tremie on site, flattened to facilitate concrete placement in the walls and columns.

1.3 REFERENCED STANDARDS

A. American Society for Test and Materials International (ASTM)

1. ASTM C 309 - Liquid Membrane-Forming Compounds for Curing Concrete
2. ASTM C 1218 - Test Method for Water-Soluble Chloride in Mortar and Concrete.
3. ASTM C 1602 - Specification for Mixing Water Used in the Production of Hydraulic Cement Concrete

B. American Concrete Institute (ACI)

1. ACI - 117 - Standard Specifications for Tolerances of Concrete Construction
2. ACI 302/1R - Guide for Concrete Floor and Slab Construction
3. ACI 373R - Design and Construction of Circular Prestressed Concrete Structures with Circumferential Tendons

C. American Water Works Association (AWWA)

1. AWWA D115 - Tendon-Prestressed Concrete Water Tanks

1.4 ALTERNATIVE POST-TENSIONING SYSTEMS

A. Ducts and anchorages manufactured by VSL Corp. have been used by the ENGINEER to design the structure, i.e., bursting steel and edge distances to a free concrete edge, and establish the quality and type of bonded and un-bonded post-tensioning system components required. The VSL systems as shown on the Drawings shall be included in the base bid.

B. The OWNER will evaluate the merits and add/deduct cost of any other system submitted in the alternate bid schedule in the proposal of the CONTRACTOR to be awarded the contract.

C. Submittals for alternative systems shall include complete technical documentation to enable the ENGINEER to become knowledgeable about the technical merits of the alternative system, a list of WST projects where the system has been used and Drawings illustrating any proposed deviations from the tendon locations and spacings shown on the Drawings. Technical documentation shall include information concerning friction and wobble coefficients, duct and couplings, strand / duct fretting characteristics, anchorage design and supplemental reinforcing, installation procedures, corrosion protection and any special construction considerations such as changes to the distance from the anchorage bearing plate to the free edge of the concrete.

D. Any re-design required for an alternate post-tensioning system will be performed by the ENGINEER for the OWNER at the CONTRACTOR'S expense.

1.5 SUBMITTALS

A. Tabulation of column heights.

B. Wall form system.

C. Column form system.

D. Ties for all forms, i.e., wall footing and walls.

E. Floor and roof slabs placements plan.

F. Construction drainage sump

G. Fogging equipment and vibrating screeds

H. Slabs placement Drawings illustrating pumper locations progression of placement and crew size.

I. First wall section W Drape tendon test results

1.6 CONSTRUCTION LOADS

A. A ramp bridge may be constructed over the completed wall footing when the concrete has reached design strength. The ramp bridge shall span from the sub-grade to the floor slab. Contact with the ring wall is unacceptable. Wall bearing(s) shall not be placed in the area of the ramp bridge until the ramp bridge is removed. The footing / wall waterstop shall be protected from any damage by covering the waterstop with a 12-inch pipe cut in half.

B. Submit wheel loads and wheelbase data for any construction vehicles to be used on the completed floor slab for review by the ENGINEER.

C. Shoring removed from the tank after completion of the roof can be temporarily placed on the roof. However, place the shoring in a manner to avoid overstressing the slab.

PART 2 PRODUCTS

2.1 CONCRETE

A. See SECTION 03 30 00

B. Calcium chloride ions shall not exceed 0.005% for the total concrete mix. The test for chloride ion content shall be in accordance with ASTM C 1218.

2.2 POST-TENSIONED BONDED TENDON SYSTEM GROUT

A. For grout materials see SECTION 03 23 50.

B. See SECTION 03 23 50 for grout mixing procedures.

2.3 WATER FOR TENDON GROUT

A. Only clean potable water shall be used.

B. Comply with ASTM C 1602.

C. A calibrated measuring device is required for measuring the proper amount of water to be added to grouts.

2.4 WALL FORMS

A. Symons hand set steel-ply concrete forms.

B. Gates & Sons, Inc. gang forms with No. 9 or "V-Lock" style ties (with waterstops).

1. "Pass through" style taper tie is unacceptable.
2. Inner ties with plastic sleeves are unacceptable.
3. Adjustable wall tie forming systems are unacceptable.
4. Form systems shall have a positive wall tie locking system.
5. Tendon locations shall not be moved to accommodate form ties.

C. Form faces shall be in as-new condition.

D. The ENGINEER shall visually review form surfaces prior to erection and prior to each placement. Forms that are rejected shall be re-faced or replaced.

E. Also see SECTION 03 10 00

PART 3 EXECUTION

3.1 GENERAL

A. This Section describes construction activities for earthwork, floor slab construction, wall construction, roof slab construction and prestressing materials for floors slabs, walls and roof slabs.

B. The provisions of this Section are based on the success of other similar projects but are not meant to prohibit innovative approaches to post-tensioned WST construction.

C. The CONTRACTOR may submit alternatives for review to meet the requirements discussed herein.

3.2 EARTHWORK

A. General:

1. Slope existing ground surfaces around the excavation away from the excavation thus preventing runoff from flowing into the excavation.
2. Surface drainage shall be directed away from any ramp area by appropriate grading and straw bale dams.
3. Ramps are not permitted above pipelines.
4. Slope ramps into the excavation to facilitate concrete truck and material delivery vehicles.
5. Excavation dimensions shall consider construction activities around the WST walls such as steel and form placement from scissors lifts. Where specific dimensions are shown on the Drawings, no variance is permitted.
6. Where a granular structural fill has been placed, maintain the fill surface and remove non-granular materials, which slough onto the surface or are "tracked" onto the granular fill surface by vehicles.

B. Materials Identification and Stockpiles:

1. The CONTRACTOR is responsible for identifying, separating and stockpiling of topsoil, granular soils, and clay soils. The OWNER will provide guidance during reviews of Work in progress to assist in the identification of any granular soils to be used in fills.
2. The stockpiles shall be graded and maintained to keep the segregated materials from sloughing, eroding and mixing with the other materials. Material slopes shall be in conformance with all appropriate safety regulations.

C. Floor Slab Sub-grade:

1. The floor slab sub-grade shall be maintained during formwork and reinforcing and post-tensioning steel placement to assure proper steel alignment and profile, proper concrete thickness and required moisture content. Non-granular material that is "tracked" onto the surface or sloughed onto the surface shall be removed. Any mud that accumulates on the grade and reinforcing steel prior to concrete placement shall be thoroughly removed.
2. The tolerance for grade shall be + 1/2 inch, -1/2 inch.
3. Construct a temporary sump at the center, low point, of the floor slab grade, flush with the sub-grade. The sump may connect to the drain line. The purpose of the sump is to facilitate rainwater drainage during floor slab construction. The OWNER shall review and accept the CONTRACTOR's sump design and plan.
4. Use heat and or other means of preventing the subgrade from becoming frozen. During winter months the subgrade shall be covered with tarps / blankets with sufficient capability to prevent frost from the subgrade and to facilitate removal of snow.

D. Wall Backfill:

1. Backfill may be placed against the wall footing during wall construction to facilitate placing wall reinforcing from scissor lifts. However, the backfill shall be kept at least 2 inches below the top of footing to prevent surface drainage from covering the wall-footing joint.
2. The WST shall be filled to the overflow level during wall backfill unless otherwise approved by the ENGINEER.

3.3 CONCRETE PLACEMENT – GENERAL

A. See SECTION 03 30 00.

B. Concrete placements shall not begin until the ENGINEER is satisfied with the placement and condition of the reinforcing and post-tensioning steel, post-tensioning anchorages and waterstops.

C. Concrete shall be placed in accordance with the project Specifications and referenced ACI standards.

3.4 FLOOR AND ROOF SLAB CONSTRUCTION

A. General:

1. The construction of the floor and roof slabs includes placement of forms to lines and grades, reinforcing steel, post-tensioning steel and concrete placement and finishing.
2. Placements shall be scheduled such that the maximum temperature of the day coincides with the initial set of the first concrete placed. For example, if the 25-year running average maximum temperature for the day is 4 pm and the initial set time is 6 hours, according to concrete design mix set time, the placement can begin no earlier than 10 am. The ENGINEER will review alternate start times proposed by the CONTRACTOR when seasonal summer monsoon rains are likely to occur or during winter when shorter periods of sunlight occur.
3. One pumper can be used to supply concrete for slab placements up to 10,000 SF in area. At least 2 concrete pumpers shall be used to supply concrete for slab placements from 10,000 to 38,000 SF in area. Slabs greater than 38,000 SF but less than 65,000 SF will require at least 3 concrete pumpers. Tanks slabs larger than 65,000 SF will require 4 or more concrete pumpers to complete the slab in the specified time frame.
4. A finishing crew is required for each concrete pumper at a minimum.
5. Concrete shall be delivered and placed at a rate to complete placement of slab concrete (final screed) at a rate no less than 6,500 SF per hour or five hours, whichever is greater. The time limitation is based on the need to have the slab curing at as uniform rate as possible to reduce the probability and risk of shrinkage cracking.

B. Waterstops:

1. Floor-slab Wall Joint:
    a. PVC Waterstop:
        1) See SECTION 03 15 13.01
        2) The PVC waterstop shall be properly tied to reinforcing steel at a maximum of one-foot centers.
        3) Curved alignment of the portion of the waterstop outside of the slab concrete placement shall be maintained by a reinforcing steel bar attached to the top of the waterstop. This bar shall be removed the day following concrete placement.

    b. Chemical Grout Waterstop:
        1) See SECTION 03 15 13.03
        2) The chemical grout waterstop duct shall be securely attached to the PVC waterstop at one-foot intervals assuring contact between the waterstop and duct.
        3) Gaps between the chemical grout waterstop duct and the PVC waterstop are unacceptable.
        4) Attach the chemical grout waterstop ports to reinforcing steel or place a tie rod inside the port to assure alignment and support during concrete placement.
        5) The ports shall extend at minimum of one-foot outside of the footing form.

C. Floor and Roof Slab Unbonded Post-tensioned Steel and Reinforcing Steel Placement

1. Reinforcing Steel:
    a. Reinforcing steel shall be placed as shown on the Drawings and accepted reinforcing and post-tensioning steel submittals.
    b. See SECTION 03 21 00.
2. Unbonded Tendon Placement:
    a. See SECTION 03 23 10.
    b. The post-tensioning steel shall be unwound from pack racks and placed in the slab in a manner to avoid damaging the extruded plastic duct. Pack racks that damage the duct during strand pack unwinding shall be removed from the project.
    c. Unless otherwise permitted by the ENGINEER,50% of the tendon / tendon intersections, 100% of tendon/reinforcing steel intersections, and 50% of the reinforcing steel/reinforcing steel intersections shall be tied. Tie wire "tail twists" shall be flattened to the post-tensioning and reinforcing steels prior to concrete placement.
    d. Tears in the extruded plastic duct shall be repaired on a daily basis during post-tensioning steel placement.
    e. Horizontal plane tendon deviations around slab-penetrations, such as pipelines, shall have a minimum radius of 25 feet. The minimum clearance to the pipe, or other appurtenance, shall be 6 inches, unless otherwise shown on the Drawings.

D. Concrete Placement:

1. Have at least one ironworker present (full-time) for each concrete placing crew during concrete placement to secure wire ties that become loose during concrete placement, replace support chairs and perform other Work related to the reinforcing steels to assure a proper installation meeting the intent of the design and Drawings.
2. Moisten the floor slab sub-grade beginning 1 day prior to, and maintained up to, the time floor slab concrete is placed unless the introduction of water is likely to introduce frost into the subgrade, or in the opinion of the ENGINEER, otherwise interfere with the compaction of the subgrade.
3. Floor and roof slab placements can be made using a wet screed method. Staff gages can be used to establish the proper depth. The length of wet screed shall be limited in order to assure that the placement edge remains "fresh".
4. Proper placement and consolidation is critical at post-tensioning anchorages to avoid anchorage blowout during stressing.
5. Concrete shall be placed in even lifts on both sides of the wall footing – wall joint PVC waterstop to avoid displacing the waterstop from its proper alignment.
6. Exercise caution to avoid damaging the chemical grout waterstop and grout port.
7. During placement of concrete on the roof slab, caution shall be exercised to avoid hitting the bearing pad on top of the wall with the vibrator. Hitting the pad with the vibrator has been known to displace the pad sufficiently to allow bonding of the roof slab concrete to the wall concrete. Bonding of roof slab concrete to the top of the wall is unacceptable.
8. Regardless of the time of year and need for cold weather protection, place insulating blankets on the perimeter of the roof slab and down the vertical roof edge face to assist in concrete strength gain to permit early slab post-tensioning.
9. When required by SECTION 03 39 00 an evaporative retardant shall be applied as recommended by the Manufacturer.
10. Unless otherwise shown on the Drawings, the slabs shall be finished with a POWER FLOAT. See 03 36 00 – CONCRETE FINISHING
11. Curing:
    a. See SECTION 03 39 00.
    b. Unless otherwise permitted in writing by the ENGINEER concrete slabs shall be cured using a spray applied membrane cure conforming to ASTM C 309 prior to ponding and wet curing..
    c. The membrane-curing compound shall be applied in as soon as practical upon completion of C
    d. When the ENGINEER permits curing with burlene, the burlene shall be applied within 4 hours of completion of the brooming. The edges of the burlene shall be lapped a minimum of 3 inches. Burlene shall be securely kept in place and continuously wet for a time period of 7 days or until the concrete reaches 70% of its design strength.
    e. When requested by the CONTRACTOR the ENGINEER may permit small areas of sheeting to be removed during working hours to facilitate subsequent activities such as hatch construction, wall form bracing and column footing construction.

12. In the event that shrinkage cracks develop, the crack shall be immediately covered with duct tape to prevent the entry of dirt and debris into the crack.
13. Shrinkage cracks wider than 0.005 inches after slab stressing shall be repaired by the CONTRACTOR after completion of the slab stressing operations. The means and methods of repair shall be submitted to the OWNER for review and acceptance. See SECTION 03 68 00.

3.5 COLUMN CONSTRUCTION

A. Forms:
   1. Only fiberglass or steel forms are acceptable for use in column forming.
   2. Brace column forms at mid-height and at the top of the column. Bracing shall be set at 90° so that column plumbness can be assured.
   3. Demonstrate column plumbness prior to concrete placement.

B. Column Height:
   1. Tabulate column heights to be submitted for review and acceptance.
   2. The column construction joint may project a maximum of 1/4 inch into the roof slab. If the joint exceeds this amount of projection, the excess concrete shall be carefully removed to within 1/4 inch of the correct elevation.

C. No construction joints are permitted in the columns.

D. Concrete Placement:
   1. Use a solid wall steel pipe tremie to properly place the concrete in columns.
   2. If steel forms are used, the forms shall be heated or cooled prior to placement to avoid thermal shock to the concrete.
   3.

3.6 WALL CONSTRUCTION

A. General:
   1. Wall segment lengths shall be constructed per the Drawings. No deviations from the plan lengths shown in the Drawings will be permitted unless reviewed and accepted by the ENGINEER.

B. Wall Natural Rubber Bearing Pads:
   1. See SECTION 03 15 20.01.
   2. The natural rubber bearing pads shall be securely adhered to the concrete.
   3. Prior to closing-up the outside wall face forms, check the adhesion of the bearing pads.

C. Vertical Wall Joints:
   1. Hydrophilic Rubber Waterstop:
      a. The hydrophilic waterstop shall be adhered to the wall with an approved adhesive.
      b. No joints are permitted in this waterstop.
      c. The waterstop shall be terminated below the top of the wall as shown on the Drawings.
   2. The concrete surfaces shall be clean and free of substances that would inhibit the bond of concrete. See SECTION 03 36 00.

D. Reinforcing Steel and Tendon Placement:

1. General:
    a. Post-tensioning tendon duct couplers and clamps shall be securely fastened to prevent the entry of concrete during concrete placement.
    b. Duct may be welded in lieu of using couplers if it can be shown that the joint is airtight.
    c. Ducts shall be plugged with foam or duct tape to prevent the entry of debris, water and concrete during placing operations. The tape or foam shall be carefully removed immediately prior to placing wedges and stressing.
2. Tendons:
    a. Tendon duct shall be placed from scissor or boom lifts.
    b. Climbing on the duct shall be minimized. The intent is to avoid damage to the duct that could possibly result from ironworkers climbing on or restraining themselves to the ducts.
    c. The transition to anchorages shall be as shown on the Drawings.
    d. The tendon shall be placed within a tolerance of 1/4 inch vertically and 2 inches horizontally.
    e. Where fewer strands are used in a multi-strand anchorage, i.e., 9 strands in a 12 strand anchorage, and anchorage grout caps not used, the extra strand holes in the anchorage shall be carefully plugged as shown in the photograph to prevent the intrusion of concrete during anchorage block-out concrete placement prior to grouting.
    f. Proper alignment shall be maintained throughout a tendon profile.
3. Wall Form-Tie / Post-tensioning Duct Conflicts:
    a. Wall form tie systems shall be designed to avoid conflicts between the tendon and wall form-ties.
4. Tie Frequency:
    a. Unless otherwise permitted by the ENGINEER tie 100% of the tendon-tendon, 100% of the tendon-reinforcing steel and 50% of reinforcing steel-reinforcing steel intersections.
    b. Tie wire tails shall be flattened against the steel to prevent contact with the form.

E. Setting Outside Face Wall Forms:
1. Prior to placing the outside wall forms the concrete and bearing pad surfaces at the bottom of the wall shall thoroughly cleaned by compressed air or by other means necessary to completely remove all debris such as tie-wire, mud, sawdust and wood.
    a. Any void area between the bearing pad and the PVC waterstop shall be carefully cleaned with compressed air and thoroughly filled with polyurethane foam to prevent any wall concrete from coming in contact with the wall footing.
    b. Check to ensure that the foam has completely bonded to prevent floating during wall concrete placement.
2. Outside face hand set modular style wall forms shall be set using scissors lifts.
3. Personnel shall not climb on the tendon ducts or reinforcing steel to set forms.

4. Care shall be exercised to avoid damaging or displacing the vertical tendon grout and vent tubes when placing forms. The foam washer of the grout and vent ports should be sufficiently compressed to prevent concrete and cement paste from getting into the tubes.

F. Wall Concrete Placement, Vibration and Finish:

1. Due to the requirement for void and cold joint free concrete in wall concrete placements, use personnel with prior experience in placing and vibrating concrete in high thin wall construction.
2. The same experienced personnel shall be responsible for vibrating and consolidating concrete in each wall segment concrete placement unless otherwise accepted by the ENGINEER.
3. Wall placement concrete lift depths shall be limited to 2 feet or less.
4. Wall segments shall be completed in a manner to permit stressing as soon as concrete compressive strengths permit. The intent is for each wall segment to have similar creep and shrinkage characteristics. Thus, delaying the last wall segment to permit roof-scaffolding access is not acceptable.
5. The top of the wall shall have a smooth trowel finish. Grind or grout the top of the wall to remove roughness, surface irregularities, and fins caused by the post-tensioning anchorage pocket and grout from vertical tendon grouting.

3.7 PREPARATION FOR STRESSING OF POST-TENSIONING STEEL TENDONS

A. The anchorages shall be cleaned and determined to be free of concrete and any other debris that could inhibit proper seating of the wedges.

B. Wedges shall be carefully placed to assure reasonably even seating.

C. Mark the concrete next to each tendon anchorage with the tendon identification number shown on the Drawings prior to stressing.

D. Each strand of a monostrand jacked tendon or one strand of a multi-strand jacked tendon shall be marked with a saw to aid elongation measurement. Water-soluble paint or crayon is unacceptable for marking the tendon for elongation measurement. The saw cut mark shall be made in a location so as to not affect tendon strength.

E. If requested by the ENGINEER, check the tendon ducts for blockages using compressed air, after concrete is placed and forms removed.

3.8 TENDON STRESSING

A. General:
1. See SECTION 03 23 10

B. Floor and Roof Slab Tendon Stressing:

1. A friction test shall be conducted on the first wall tendon to confirm that the design stress can be met.
2. The slab tendons shall be half-stressed when the compressive strength of the slab has been determined to be greater than 60% of the anchorage capacity.
3. Tendons less than 100 feet in length shall be stressed from one end with adjacent tendons stressed from alternate ends. Tendons greater than 110 feet in length shall be stressed from both ends. The first and second "pull" of adjacent tendons shall be made from opposite tendon ends unless otherwise permitted by the ENGINEER.
4. When the concrete has reached a compressive strength greater than 110% of the anchorage capacity the tendons shall be fully stressed.

C. Wall Tendon Stressing:

1. General:
   a. Any formwork under the wall including materials such as foam, plywood, sand etc., shall be removed prior to stressing the wall tendons.
   b. The formwork materials under the wall shall be physically removed. The use of an open flame, such as a weed burner propane torch, or other method of removing the material that could potentially harm the natural rubber bearing pads, is unacceptable.

2. Circumferential Draped Tendons:
   a. The circumferential draped tendon stressing sequence shown on the Drawings shall be used.
   b. Circumferential draped tendons shall be stressed from both ends.

D. Tendon Grouting:

1. Tendon grouting shall be performed within 5 days of stressing and completed within 10 days of tendon stressing.
2. In the case of walls, tendon stressing shall be completed prior to any grouting.
3. A grout Manufacturer's representative shall be present during the initial mixing and pumping of the grout to assist with the proper preparation and performance of the grouting.
4. The temperature of the concrete shall be a minimum of 40° F unless the manufacture of the grout permits a lower temperature and the CONTRACTOR requests to use the lower temperature. Both surface and internal concrete temperatures shall meet this criteria.

E. Tendon Anchorage Pockets:

1. See SECTION 03 67 00

END OF SECTION

SECTION 05 51 51
GALVANIZED STEEL STEPS AND LADDERS

PART 1 GENERAL

1.1 WORK INCLUDED:

A. This work includes furnishing and installing of the hot dipped galvanized steel ladder and steps, including materials, fabrications, and installation in accordance with the Drawings and applicable local state, and federal safety regulations.

B. It is the intent of this specification that the ladder assembly conform to the Code of Federal Regulations (CFR) Section 29, Chapter XVII, Part 1910.27, Fixed Ladders. In the event a conflict occurs between this specification and the CFR, the CFR specification shall in all cases prevail.

1.2 QUALITY STANDARDS:

A. American Welding Society (AWS)

1. ANSI/AWS D1.1 – Structural Welding Code
2. Welding Handbook – Materials and Applications – Part 1

B. American Society for Testing Materials

1. ASTM A 6, Specification for General Requirements for Rolled Structural Steel Bars, Plates, Shapes and Sheet Piling
2. ASTM A 36, Specifications for Structural Steel
3. ASM A 123, Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products
4. ASTM E 488, Test Methods for Strength of Anchors in Concrete and Masonry Elements
5. ASTM A 615, Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement

C. American Institute for Steel Construction (AISC)

1. Steel Construction Manual

D. Code of Federal Regulations (CFR)

1. Section 29, Chapter XVII, Part 1910.27

E. Society for Protective Coatings (SSPC)
   1. SP 8 – Pickling
   2. SP 10 – Near White Blast Cleaning

1.3 SUBMITTALS

A. Shop drawings shall conform to the requirements of the Specifications.

B. Shop drawings detailing fabrication including plan and elevation views, sections, details and connections. Indicate welded connections using standard AWS welding symbols. Clearly indicate net weld lengths, sizes and welding sequences.

C. Submit copies of welder certifications

D. Submit copies of coating system certification

1.4 DELIVERY, STORAGE AND HANDLING

A. See Specifications.

B. Handle the fabrication using nylon slings in such a manner to avoid damaging or permanently bending the fabrication.

C. Store the fabrication in a safe location on wood pallets and protect from damage due to any construction operations.

D. Remove dirt prior to lifting and installing.

1.5 QUALITY ASSURANCE

A. All welding shall conform to referenced AWS standards

B. Materials shall conform to referenced AISC – Steel Construction Manual and ASTM standards

C. Qualify welding processes and welders in accordance with AWS D1.1.

D. Field Measurements: Take field measurements prior to fabrication and after structure deflections have occurred to ensure proper fitting of the work. Allow for trimming and fitting whenever the taking of field measurements before fabrication might delay the work

1.6 DESIGN LOADS

A. Design loads shall be in accordance with CFR Section 29, Chapter XVII, Part 1910.27, Fixed Ladders

1.7 ZINC (HOT-DIP GALVANIZED) COATING

A. Unless otherwise shown in the drawings the ladder shall be hot-dip ganvanized after fabrication.

PART 2 MATERIALS

2.1 GENERAL

A. Materials used in the work shall conform and meet the requirements for the class of the material named.

B. The as-fabricated straightness tolerances of members shall be less than or equal to one-half of the tolerances in ASTM A 6.

2.2 BAR AND PLATE STEEL

A. The steel used for fabricating ladder and safety cage assemblies shall conform to the requirements of ASTM A 36.

2.3 DEFORMED REINFORCING BAR STEEL

A. Deformed reinforcing bar steel used for ladder rungs shall conform to ASTM A 615, Grade 40 or 60.

2.4 CONCRETE ANCHOR BOLTS

A. Type 316 or 316L SS wedge style anchor bolts shall be used for anchoring steps or ladders to the walls of concrete structures .

B. Ramset / Red Head WW-5860 (5/8-inch dia. by 3 1/2-inch long) anchor bolts, or equal, shall be used.

1. Bolt body shall conform to Type 316 stainless steel
2. Expansion clip shall conform to Type 316 stainless steel
3. Washer shall conform to Type 316 stainless steel
4. Nut shall conform to Type 316 stainless steel

PART 3 EXECUTION

3.1 GENERAL

A. Fabrication shall conform to the appropriate sections of the AWS and AISC Standards.

3.2 WELDING

A. All welding shall conform to the Structural Welding Code of the AWS.

B. The ladder and safety shall be fabricated using prequalified fillet welds provided that they conform to the requirements of the AWS Code and the AISC Specifications.

C. All fillet welds shall have a 1/4-inch root thickness.

3.3 FABRICATION AND GALVANIZING

A. Flame cutting of steel may be by hand or mechanically guided means.

B. Surfaces shall have a maximum ANSI roughness height value of 500. Any fabricating technique, such as friction sawing, cold sawing, milling, etc., that produces such a finish may be used.

C. Members which are to be framed to other parts of the steel ladder or safety cage may have a variation from the detailed length not greater than 1/16-inch.

D. Completed members shall be free from twists, bends, and open joints.

E. Sharp kinks, bends, or burrs are cause for rejection of the ladder.

F. After fabrication surfaces shall be prepared and galnvanized in accordance with ASTM A 123.

3.4 SURFACE PREPARATION:

A. Surfaces shall be cleaned after fabrication of the assembly by SSPC-SP10, Near White Metal Blast Cleaning or SSPC-SP8, Pickling.

B. SSPC-SP10 requires the removal of 95% of all visible rust, mill scale, paint and other foreign material from each square inch of surface by compressed air nozzle blasting, centrifugal wheels or other means of abrasive blast cleaning.

3.6 INSTALLATION

A. Concrete Structures

1. All wedge style anchor boltholes shall be drilled when the ladder is temporarily set in place as a template. Re-drilling of holes or enlarging of holes is not permitted.

2. The drilling operations shall be performed to avoid damage to any post-tensioning tendons in the wall. The stainless steel wedge anchors shall be installed in accordance with the manufacturer's recommended procedures.

3. Fabrications shall be installed after stressing of post-tensioning steel tendons.

END OF SECTION

SECTION 06 82 00
WST FIBERGLASS REINFORCED PLASTIC (FRP) FABRICATIONS

PART 1 GENERAL

1.1 DESIGN

A. The drawings illustrate FRP fabrications for ladders, cages, railings and stairways that require a CONTRACTOR / manufacturer's design with loads as described herein.

B. The design shall be prepared and sealed by a Professional Engineer licensed to practice in Colorado. Calculations shall be submitted to the ENGINEER for review and acceptance.

1.2 REFERENCES

A. The following is a list of standards which may be referenced in this Section:

1. American Society for Testing and Materials (ASTM):

a. ASTM C 177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded Hot-Plate Apparatus.
b. ASTM C 581 - Standard Practice for Determining Chemical Resistance of Thermosetting Resins Used in Glass-Fiber-Reinforced Structures Intended for Liquid Service.
c. ASTM C 582 - Standard Specification for Contact-Molded Reinforced Thermosetting Plastic (RTP) Laminates for Corrosion-Resistant Equipment.
d. ASTM D 570 - Standard Test Method for Water Absorption of Plastics.
e. ASTM D 635 - Standard Test Method for Rate of Burning and/or Extent and Time of Burning of Plastics in a Horizontal Position.
f. ASTM D 638 - Standard Test Method for Tensile Properties of Plastics.
g. ASTM D 695 - Standard Test Method for Compressive Properties of Rigid Plastics.
h. ASTM D 696 - Standard Test Method for Coefficient of Linear Thermal Expansion of Plastics Between -30 °C and 30°C With a Vitreous Silica Dilatometer.
i. ASTM D 790 - Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials.

j. ASTM D 792 - Standard Test Methods for Density and Specific Gravity (Relative Density) of Plastics by Displacement
k. ASTM D 2344/D2344M - Standard Test Method for Short-Beam Strength of Polymer Matrix Composite Materials and Their Laminates
l. ASTM D 2583 - Standard Test Method for Indentation Hardness of Rigid Plastics by Means of a Barcol Impressor.
m. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

2. Building Officials and Code Administrators International (BOCA): National Building Code (NBC).
3. International Conference of Building Officials (ICBO): Uniform Building Code (UBC).
4. Occupational Safety and Health Act (OSHA): 29 CFR 19.10, Code of Federal Regulations.
5. Southern Building Code Congress International (SBCCI): Standard Building Code (SBC).
6. Underwriters' Laboratories, Inc. (UL): 94-91, UL Standard for Safety Tests for Flammability of Plastic Materials for Parts in Devices and Appliances, Fourth Edition.
7. American National Standards Institute / National Sanitation Foundation (NSF)

a. ANSI / NSF 61 – Drinking Water System Components – Health Effects

1.3 DESIGN REQUIREMENTS

A. This Section contains components and connectors that require CONTRACTOR design.

B. Products and fabrications to be used inside a potable water retaining structure shall be ANSI/NSF 61 Certified or coated with an ANSI/NSF 61 Certified coating system.

1.4 SUBMITTALS

A. Shop Drawings:

1. Product Data: Catalog information and catalog cuts showing materials, design tasks, load, span, and deflection; include manufacturer's specifications.
2. Submit calculations for fabricated items showing dimensions, materials of construction, weight, size, location, and verifying compliance with

the specified design criteria. Calculations shall also include the following data on the structural elements:

a. Section properties.
b. Flexural, tensile, compressive and shear strengths.
c. Weight per foot.
d. Modulus of elasticity.

3. Grating and Top Plates: Show location of connections to adjacent grating, supports, and other Work.
4. Grating Supports: Show anchorage to supporting structure.
5. Hatches, Stairs, Platforms, Stringers, Handrails, Ladders, and Support Structures:

a. Show dimensions, weight, size, and location of connections to adjacent supports and other Work.
b. Structural calculations for hatches, gratings, platforms, ladders and cages, handrails, and other fabrications shown.
c. Hatches: Show method of attaching hatch cover to grating such that the cover can be independently removed by hand without the use of tools.
d. Test Reports:

1) Test data for handrails and supports may supplement load calculations providing data covers the complete system, including anchorage.
2) Test data for all components showing load and deflection due to load, in enough detail to prove handrail is strong enough and satisfies national, state, local standards, regulations, code requirements, and OSHA 29 CFR 19.10, using design loads specified.
3) Include test data for the following:

a) Railing and post connections.
b) Railing wall connections.
c) Post and base connections.
d) Railing expansion joint connections.

B. Samples: Each type of grating, including grating with bonded top plate, handrail, and handrail connection.

C. Quality Control Submittals:

1. Handling and storage requirements.

2. Manufacturer's installation instructions.
3. Factory test reports for physical properties of product.
4. Manufacturer's Certification of Compliance for specified products.
5. Fabricator’s qualification experience.
6. Independent laboratory test report, dated within 2 years of submittal date, of fire retardant testing conducted on exact type of grating proposed (not a resin test report).
7. Manufacturer’s qualification experience.

1.5 QUALIFICATIONS

A. Fabricator: Minimum of 5 years experience.

B. Manufacturer: Minimum of 5 years experience in the manufacturing of products meeting these Specifications.

C. Designer: Calculations required for CONTRACTOR design shall be prepared and stamped by a Professional Engineer licensed in the State of Colorado.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Preparation for Shipment:

1. Ladders shall be shipped fully shop-fabricated and assembled.
2. Insofar as is practical, factory assemble other items provided hereunder.
3. Package and clearly tag parts and assemblies that are of necessity shipped unassembled in a manner that will protect the materials from damage, and facilitate identification and final assembly in the field.

B. Storage and Handling: In accordance with manufacturer's recommendations and in such a manner as to prevent damage of any kind, including overexposure to sunlight.

PART 2 PRODUCTS

2.1 GENERAL

A. Like Items of Materials: Where possible, provide end products of one manufacturer to achieve standardization for appearance, maintenance, and replacement.

B. Unless otherwise specified, all products shall be manufactured by a pultruded process using vinyl ester resin.

C. Unless otherwise specified, products shall be manufactured with ultra-violet (UV) inhibitor additives.

D. Exterior surfaces shall have a synthetic surface veil covering.

E. Furnish molded products as an option where permitted by Specifications.

F. Chemical Resistance: Unless otherwise specified, resins used in the fabrication of FRP products shall be resistant to the chemicals in the location where the FRP product will be used.

G. Fire Retardance (unless otherwise specified):

1. Flame spread shall be less than 25 as measured by ASTM E 84.
2. Include combinations of aluminum trihydrate, halogen, and antimony trioxide, where required to meet fire retardance, in the resin system.
3. Meet self-extinguishing requirements of ASTM D 635.

H. Unless otherwise specified, color pigment shall be dispersed in the resin system. Color of fabricated products shall be OSHA Safety Yellow.

I. Unless otherwise specified, fabricate FRP products exposed to outdoor conditions with an additional 1-mil-thick UV coating to shield product from UV light.

J. All cut ends, holes, and abrasions of FRP shapes shall be sealed with resin to prevent intrusion of moisture.

2.2 GRATING WITH BONDED TOP PLATE, AND STAIR TREADS

A. General:

1. 100 psf minimum, unless otherwise shown.
2. Maximum Deflection: 1/4-inch, unless otherwise shown.
3. Grating shall have a shop-bonded top plate at locations shown on the Drawings. The top plate shall have an epoxied coated anti-skid grit surface.
4. Stair Tread: 100 psf uniform load or a concentrated load of 300 pounds on an area of 4 square inches located in the center of tread, whichever produces the greater stress.

B. Molded Type:

1. Nonskid grit affixed to top of bar surface or a concave, meniscus top to all bars, providing skid resistance. Skid-resistant surface not required for grating at locations where bonded top plate is used.
2. Load bars in both directions with equal stiffness.

3. Square mesh, 1-1/2-inch maximum spacing.

C. Pultruded Type:

1. Main bars joined by cross bars secured in holes drilled in main bars.
2. Cross bars, with 6-inch maximum spacing, shall mechanically lock main bars in position such that they prevent movement.
3. Intersections: Bond using adhesive as corrosive-resistant as pultrusion resin.
4. Main Bar Ends: Minimum bearing support width of 1-1/2 inches.
5. Skid-Resistant Surface: Grit adhesively bonded, manufacturer's standard. Skid-resistant surface not required for grating at locations where bonded top plate is used.
6. Provide extra stiffness around openings.

D. Hold-Down Clamps: Same material as grating or Type 316 stainless steel, minimum of 4 clamps per panel.

E. Bolts and Connectors:

1. Corrosion-resistant FRP or Type 316 stainless steel.
2. Size and strength to meet UBC requirements.

F. Manufacturers:

1. Fibergrate Composite Structures, Inc., Addison, TX.
2. IKG/Borden, Clark, NJ.
3. Strongwell, Chatfield Division, Chatfield, MN, or Bristol Division, Bristol, VA.
4. Chemgrate Corp., Woodinville, WA.
5. Advanced Composite Technology, Inc., Seattle, WA

2.3 HANDRAIL

A. Structural Criteria:

1. Deflection: No permanent set in any member or connection when tested to design load.
2. Apply load to produce maximum stress and deflection in each of the respective components.
3. Top Rail and Posts of Handrails: Capable of withstanding the following load cases applied with a safety factor of 3.0:

a. Concentrated load of 200 pounds applied at any point and in any direction in accordance with UBC.
b. Uniform load on the top rail of 50 pounds per linear foot applied horizontally in accordance with UBC.

c. Concentrated load need not be assumed to act concurrently with uniform loads in accordance with UBC.

4. Mid-Rails with Corner Returns: Withstand 300-pound concentrated vertical load applied at any point or direction without damage and loosening of fittings or attachment hardware.
5. Concrete Anchors for Handrail Wall Brackets: Not to exceed UBC allowable loads for actual spacing, edge distance, and embedment, with assumed concrete strength of 4,000 psi.
6. Concrete Anchors: In accordance with UBC allowable load values for size, length, embedment, spacing, and edge distance to match required loads shown in calculations.
7. Connections, Mounts, Bases: Withstand all handrail loads without permanent set and with a safety factor of at least 1.65 against failure.

B. Thermal Movement:

1. Allow for maximum range of ambient temperature change (difference between high or low and installation temperature).
2. Base design on actual surface temperatures of materials due to both solar heat gain and night time sky heat loss.
3. Temperature Change Range: 70 ºF, ambient; 100 ºF, material surfaces.

C. Rails and Posts:

1. 2-inch nominal square or round tubing posts.
2. 1-3/4- or 2-inch nominal round or square rails.
3. Maximum Post Spacing: 5 feet.

D. Kickplates/Toeboard: Corrugated, 4-inch by 1/2-inch by 0.125-inch thick or 4-inch by 9/16-inch thick at all handrail locations.

E. Kickplate/Toeboard Connectors and Splices: Continuous with provision for expansion and contraction without distortion or buckling.

F. Connections, Mounts, Bases: Fiberglass or Type 316 stainless steel.

G. Pultruded Parts:

Minimum Mechanical Properties	Test Method	Values
Tensile Stress	ASTM D 638	30,000 psi
Tensile Modulus	ASTM D 638	2.5×10^6 psi

Minimum Mechanical Properties	Test Method	Values
Compressive Stress	ASTM D 695	30,000 psi
Compressive Modulus	ASTM D 695	2.5×10^6 psi
Flexural Stress	ASTM D 790	30,000 psi
Flexural Modulus	ASTM D 790	1.6×10^6 psi
Shear Stress	ASTM D 2344	4,500 psi
Density	ASTM D 792	0.060-0.070 lbs/in.^{3}
24-Hour Water Absorption	ASTM D 570	0.6% max.
Coefficient of Thermal Expansion	ASTM D 696	4.4×10^{-6} in./in./F
Flexural Stress	Full Section	36,000 psi
Flexural Modulus	Full Section	3.7×10^6 psi

H. NSF Certification: Where shown in Drawings, handrails shall be certified by NSF International as complying with ANSI / NSF Standard 61.

I. Manufacturers:

1. Strongwell, Chatfield Division, Chatfield, MN, or Bristol Division, Bristol, VA, or approved equal.

2.4 STRUCTURAL SHAPES AND PLATFORMS

A. Deflection and Safety Factors:

1. Deflection Criteria: Not to exceed L/360.
2. Safety Factors: Minimum ratios of the ultimate stress to the allowable static service stress:

   a. Flexural Members: 2.5
   b. Compression Members: 3.0.
   c. Shear: 3.0.
   d. Connections: 4.0.

3. Minimum design safety factors for dynamic or impact loads shall be twice the values for static service loads.

B. Loads:

1. 100 psf uniform live load over platform unless specifically indicated otherwise.
2. Static and dynamic loads for equipment shown.

C. Glass fiber reinforced polyester or vinyl ester resin matrix, approximately 50 percent resin-to-glass ratio.

D. Continuous glass strand rovings shall be used internally for longitudinal strength.

E. Continuous strand glass mats shall be used internally for transverse strength.

F. Material Properties:

Minimum Ultimate Coupon Properties (UN)		
Material Properties	**Test Method**	**Units**
Pultruded Fiberglass Structural Shapes		
Ultimate tensile stress in longitudinal direction, psi (Mpa)	ASTM D 638	30,000 (207)
Ultimate compressive stress in longitudinal direction, psi (Mpa)	ASTM, D 695	30,000 (207)
Ultimate flexural stress in longitudinal direction, psi (Mpa)	ASTM D 790	30,000 (207)
Ultimate short beam shear in longitudinal direction, psi (Mpa)	ASTM D 2344	4,500 (31)
Ultimate tensile stress in transverse direction, psi (Mpa)	ASTM D 638	7,000 (48)
Ultimate compressive stress in transverse direction, psi (Mpa)	ASTM D 695	15,000 (103)
Ultimate flexural stress in transverse direction, psi	ASTM D 790	10,000 (69)

Minimum Ultimate Coupon Properties (UN)		
Material Properties	**Test Method**	**Units**
Pultruded Fiberglass Structural Shapes		
(Mpa)		
Density (lb/in.^{3}) (kg/mm^3)	ASTM D 792	0.060-0.070 (0.00166-00194)
Water absorption (25 hr immersion)	ASTM D 570	0.60 max, % by weight
Barcol hardness	ASTM D 2583	45
Coefficient of thhermal expansion 10^{-6} in./in./ºC	ASTM D 696	
Expansion, LW10^{-6} in./in./ºF		4.4
Thermal conductivity, Btu-in./ft^2/hr/ºF	ASTM C 177	

G. Flame-Retardant Properties:

Minimum Ultimate Coupon Properties (UN)		
Material Properties	**Test Method**	**Units**
Flame-Retardant Properties		
Flammability test	ASTM D 635	Self-extinguishing
Surface burning characteristics	ASTM E 84	25 Maximum
Flammability class	UL 94	VO
Temperature index	UL 94	130 ºC

H. Manufacturers:

1. Strongwell, Chatfield Division, Chatfield, MN, or Bristol Division, Bristol, VA.
2. Fibergrate Composite Structures Inc., Addison, TX.

PART 3 EXECUTION

3.1 GENERAL

A. Install in accordance with manufacturer's written instructions.

B. Install plumb or level, rigid and neat, as applicable.

C. Furnish all fasteners and anchorages for complete installation.

D. Seal all field cut holes, edges, and abrasions with a catalyzed resin compatible with original resin.

3.2 GRATING AND GRATING WITH TOP PLATE

A. Anchor grating securely to supports to prevent displacement.

B. Install each grating section such that it is easily removable.

C. Clearance (Grating to Vertical Surfaces): 1/4-inch (plus or minus 1/8-inch tolerance).

3.3 HANDRAIL

A. Provide and install expansion and contraction connections as shown on approved Shop Drawings.

END OF SECTION

SECTION 07 73 00
WST ACCESS HATCHES

PART 1 GENERAL

1.1 WORK INCLUDED

A. This Section of the Specifications will govern the furnishing and installation of all access hatch assemblies, including materials, fabrications, and installation. Not all hatches in this specificataion are used in the WORK.

B. The type and size of the manway and equipment hatches are shown on the Drawings.

1.2 ACCEPTABLE MANUFACTURER / MODELS

A. Products manufactured by the Bilco Company, New Haven, Connecticut are used herein to establish quality and type.

B. Hatch types include Type “D” scuttles.

1.3 INTENDED USE

A. The intended use of the Type “D” scuttle is for a water and insect-tight installation.

B. The CONTRACTOR is responsible for informing the manufacturer of the intended use.

1.4 DESIGN LOAD

A. The Type “D” scuttle shall be capable of meeting a **snow load of 45 psf** applied uniformly over the hatch unless otherwise shown in the drawings..

1.5 SHOP DRAWINGS

A. Drawings

B. Manufacturer’s data sheets

C. Guarantee

1.6 GUARANTEE

A. The manufacturer shall guarantee the hatch for a period of five years from defects in material or workmanship.

PART 2 PRODUCTS

2.1 TYPE “D” SCUTTLES

A. Cover Leaf:

1. The door leaf shall be manufactured from 11 gauge aluminum with an 18 gauge aluminum liner.
2. The cover shall be insulated with one inch glass fiber between the liner and cover material.
3. The cover shall have a continuous extruded neoprene gasket all around the cover perimeter to provide a positive, complete, seal onto the top surface of the curb to prevent entry of insects, dust and snow when the cover is closed. Splices or gaps in the gasket are unacceptable. Light visible through any part of the gasket is cause for rejection of the access hatch. If the hatch is rejected it shall be replaced at the CONTRACTOR's expense.
4. The equipment hatch cover shall be equipped with an enclosed two point snap lock.
5. Covers shall automatically lock in the open position with a rigid hold open arm equipped with a vinyl grip to permit easy release for opening.

B. Curb:

1. The 12-inch high fully enclosed curb shall be manufactured from 11 gauge aluminum inside and outside. The curb shall have a 3 1/2-inch flange with holes for anchors spaced at 9 inch centers maximum to secure the hatch to the concrete pedestal. The curb shall be equipped with an integral 11 gauge aluminum cap flashing fully welded at the corners and weathertight.
2. Anchor bolt holes in the flange of the curb shall be spaced no greater than 9-inches.

C. Anchor bolts:

1. Wedge style anchor bolts shall be Redhead WW-5860 (5/8-inch dia. by 3 1/2-inch long) stainless steel anchor bolts.

D. Hardware:

1. All hardware shall be stainless steel, Type 302 or 304, including the latch assembly, inside and outside padlock hasps, arm guide bracket, hinges, hinge pins, hold open arm, lock strike, spring tubes, shoes and all fasteners.
2. Cover hardware shall be bolted to the cover into heavy gauge channel supports welded to the underside of the cover and concealed within the insulation space.
3. The hatch shall be completely assembled with heavy pintle hinges and compression spring operators enclosed in telescopic tubes. The upper tube shall be the outer tube to prevent accumulation of moisture, grit and debris inside the tube assembly.

E. Lock:

1. The scuttle shall have a spring latch with handles on the inside and outside and padlock hasps on the outside.

F. Padlock Hasp:

1. The scuttle shall have a padlock hasp incorporated into the outside handle.
2. Alternatively, the padlock hasp may be separate from the handle. The separate padlock hasp shall also be enclosed with a covered three sided box enclosure.

2.2 TYPE "K" DOOR

A. Frame:

1. The frame shall be 1/4-inch extruded aluminum, mill finished, with built-in neoprene cushion for the door leaf and with strap anchors bolted to the exterior.
2. A bituminous coating shall be factory applied to the exterior of the frame to prevent electrolytic action between the aluminum and the reinforcing steel in the concrete.

B. Door Leaf:

1. Door leaf shall be 1/4-inch aluminum diamond plate reinforced with aluminum stiffeners as required to withstand a live load of 150 pounds per square foot.
2. The door leaf shall open to 90-degrees and lock automatically in that position.
3. The hinge direction shall be as shown in the Drawings.
4. The door leaf shall be equipped with a "snap" lock and removable exterior handle "key wrench".

C. Hardware:

1. All hardware shall be stainless steel, Type 302 or 304, including the latch assembly, hinges, hinge pins, hold open arm, lock strike and all fasteners.
2. The hinges shall be bolted to the underside of the frame and pivot on torsion bars that counterbalance the weight of the door leaf for easy operation.
3. A vinyl grip handle attached to the hold open arm shall be provided to release the cover for closing.

2.3 GASKET

A. Sheet rubber with a Shore A Durometer of 40.

2.4 CURB FLANGE BACKING BAR

A. The 1/4-inch thick backing angle shall be fabricated from aluminum meeting ASTM B 209 and ASTM B 210.

PART 3 EXECUTION

3.1 GENERAL

A. The scuttles and doors shall be installed in accordance with the manufacturer's instructions and recommendations and the Drawings.

B. A watertight seal is required between the scuttle and the concrete pedestal. Place a fabricated 1/2 inch thick x 2-1/2-inch wide neoprene gasket between the scuttle and the concrete pedestal. No more than four joints are permitted in the gasket. Also, joints shall be fabricated to eliminate gaps in the gasket.

C. Place the 1/4 inch thick x approximately 2-inch wide aluminum angle on top of the curb flange to stiffen the flange and facilitate a tight seal between the scuttle and concrete. Do not over tighten the bolts.

D. Sikaflex 1-c sealant shall be placed between the concrete pedestal and the scuttle curb flange using the sheet neoprene gasket as a backerrod. Place sealant on both the inside and outside surfaces.

3.2 INSTALLATION

A. Scuttles:

1. All wedge style anchor bolt holes shall be drilled when the scuttle is temporarily set in place as a template.
2. Redrilling of holes or enlarging of holes is not permitted.
3. The stainless steel wedge anchors shall be installed in accordance with the manufacturer's recommended procedures.
4. The threads of the exposed bolt shall be tack welded or "cross" threaded to prevent removal.

B. Doors:

1. The frame shall be leveled and supported during concrete curb placement.
2. Check strap anchor bolt nut for tightness prior to placing concrete.
3. Remove any concrete from the exposed frame and door leaf immediately after concrete placement.

END OF SECTION

SECTION 07 91 23
BACKER ROD

PART 1 GENERAL

1.1 WORK INCLUDED

A. The work consists of furnishing and installing closed cell foam backer rod in joints between adjacent constructions in accordance with these Specifications and in conformity with the Drawings.

B. See SECTION 07 92 00 for requirements relating to use with sealants.

1.2 QUALITY STANDARDS

A. American Society for Testing and Materials (ASTM):

1. D 1621 – Test Method for Compressive Properties of Rigid Cellular Plastics
2. D 1622 - Test Method for Apparent Density of Rigid Cellular Plastics
3. D 1623 – Test Method for Tensile and Tensile Adhesion Properties of Rigid Cellular Plastics
4. E 96 – Test Methods of Water Vapor Transmission of Materials
5. C 509 – Specification for Elastomeric Cellular Preformed Gasket and Sealing Materials
6. C 1016 – Test Method for Determination of Water Absorption of Sealant Backup (Joint Filler) Material

1.3 DELIVERY, STORAGE AND HANDLING

A. Deliver the materials to the project site in the manufacturer's containers with all labels intact and legible at the time of use.

B. Materials shall be stored in a secure, indoor, dry area.

C. Maintain the material in a dry condition during delivery, storage, handling and installation.

1.4 SUBMITTALS

A. Manufacturer's data sheet and installation instructions

PART 2 MATERIALS

2.1 PHYSICAL PROPERTIES

Physical Property	*ASTM Test Method*	*Value*
Density	ASTM D 1622	2.0 lbs. / cu. Ft.
Tensile Strength	ASTM D 1623	50 psi

Physical Property	*ASTM Test Method*	*Value*
Compressive deflection	ASTM D 1621	25% at 5 psi
Water absorption	ASTM C 1016	0.03 gm / cc
Water Absorption	ASTM C 509	0.02% by volume
R Value	ASTM E 96	3.4
Color		Grey

2.2 COMPATIBILITY

A. The backer rod shall be compatible with butyl, polysulfide, acrylic, polyurethane and silicone sealant compositions.

2.3 MATERIAL

A. The backer rod shall be an extruded round, closed cell, low-density polyethylene foam material with a skin-like outer texture.

2.4 ACCEPTABLE PRODUCTS/ MANUFACTURERS

A. Industrial Thermo Polymers Limited (ITP) closed-cell Polyethylene Foam Backer Rod, 2316 Delaware Avenue, Suite 216, Buffalo, New York 14216 (800) 387-3847.

PART 3 EXECUTION

3.1 GENERAL

A. Examine the concrete surfaces and correct any surface imperfections that will prevent proper installation and performance of the backer rod.

B. The joint shall be clean, dry and free of obstructions.

C. Backer rod for each joint shall be furnished in a single piece for the full depth, length and thickness required for the joint.

D. Where joints are required, i.e., around a rectangular or circular opening, the backer rod joint shall be made by butting two pieces together.

E. Backer rod that is torn or irregular in any manner shall not be used.

F. Use a blunt instrument, which will not damage the backer rod, or roller to uniformly install the backer rod at the proper depth.

G. Unless otherwise shown, the joint depth shall be 1.5 times the joint width.

3.2 BACKER ROD DIAMETER

A. Install the backer rod in accordance with the following table:

Joint Width (Inches)	Backer Rod Size (Inches)
3/16	1/4
1/4	3/8
3/8	1/2
1/2	5/8
5/8	3/4
3/4	7/8
7/8	1
1	1 1/4
1 1/8	1 1/2
1 5/8	2
2	2 1/2
2 1/2	3
3 1/2	4

END OF SECTION

SECTION 07 92 00
SEALANTS

PART 1 GENERAL

1.1 WORK INCLUDED

A. The Contractor shall furnish all labor, materials, tools, equipment, and perform all work and services for all sealant work, both exterior and interior where the words caulk, caulking or sealant is shown on drawings or specified, in accordance with provisions of the Contract Documents, and completely coordinated with work of all other trades.

B. Although such work is not specifically indicated, furnish and install all supplementary or miscellaneous items, appurtenances and devices incidental to or necessary for a sound, secure and complete installation.

1.2 QUALITY STANDARDS

A. American Society for Testing and Materials (ASTM)

1. ASTM C 509, Cellular Elastomeric Preformed Gasket and Sealing Material
2. ASTM C 920, Elastomeric Joint Sealants
3. ASTM D 1056, Flexible Cellular Materials - Sponge or Expanded Rubber
4. ASTM D 1565, Flexible Cellular Materials - Vinyl Chloride Polymers and Copolymers (Open-Cell Foam)

B. SWRI (Sealant, Waterproofing and Restoration Institute) - Sealant and Caulking Guide Specification

C. Federal Specification (FS)

1. TT-S-011543A
2. TT-S-00227E(3)
3. TT-S-00230C, Type II, Class A

D. Acceptable manufacturers

1. Subject to compliance with specifications, products of the following manufacturers are accepted for use:

a. Potable Water Containment Structures

1) Polyurethane sealant:

a) Sikaflex - 1a
b) Sikaflex -2c, NS

b. Fire Resistant Sealant for Buildings

1) Fire resistant sealant:

a) 3-6548 silicone RTV foam by General Electric

c. Portland Cement Concrete Pavements

1) Dow Corning 888 or 890.
2) Sika, Sikaflex - 15 LM

d. Portland Cement Concrete Curb, Gutter and Sidewalk

1) Sikaflex 1a
2) Sikaflex - 2c, NS or SL

1.3 SUBMITTALS

A. Sealants

B. MSDS

C. Primers

1.4 QUALITY ASSURANCE

A. Perform work in accordance with SWRI requirements for materials and installation.

B. Perform work in accordance with sealant manufacturer's requirements for preparation of surfaces and material installation instructions.

C. Maintain one copy of each document on site.

PART 2 PRODUCTS

2.1 MATERIALS

A. Color

1. Provide colors matching materials being sealed.
2. Where compound is not exposed to view in finished work, provide manufacturer's color which has best performance.

B. Type

1. Provide non-sagging sealant for vertical joints.
2. Sealants for horizontal joints may be self-leveling.

C. Filler Compatibility

1. Before use of any sealant, investigate its compatibility with joint surfaces, fillers and other materials in joint system.
2. Provide only materials compatible with installation conditions.

D. Field Services

1. Obtain sealing compounds only from manufacturers who will, when required, provide services of manufacturer's field service representatives at project site for purposes of advising and instructing installers in proper procedures and precautions for use of materials.
2. Provide such services, when required, without expense to Owner.

E. Compressible Sealants

1. Size compressible sealant so that width of material is twice joint width.

F. Sealant Applications

1. One or two component polyurethane. (Exterior and interior use).
2. One or two component silicone. (Exterior use and interior wet area use.)
3. Compressible Sealant (where indicated).
4. Epoxy Sealants (where indicated).

G. Joint Cleaner

1. The joint shall be cleaned as recommended by sealant manufacturer.

H. Joint Primer-Sealer

1. The joint shall be primed as recommended by sealant manufacturer.

I. Bond Breaker

1. Bond breaker material shall be furnished and installed as recommended by sealant manufacturer.

2. Sealant Backer Rod

a. Rod stock of polyethylene, polyethylene jacketed polyurethane foam, or other flexible, non-absorbent, non-bituminous material recommended by sealant manufacturer. The backer rod shall;

1) Control joint depth.
2) Break bond of sealant at bottom of joint.
3) Provide proper shape of sealant bead to minimize possibility of sealant extrusion.

3. Tape

K. Compressible Sealant

1. Foamed polyurethane strip saturated with polymerized polybutylene waterproofing.
2. Foamed polyurethane strip saturated with polymerized polybutylene waterproofing coated on front face with non-reactive release agent that will act as bond breaker for applied sealant.
3. Foamed polyurethane strip saturated with polymerized polybutylene waterproofing coated on front face with non-reactive release agent that will act as bond breaker for applied sealant.

L. Adhesive for Compressive Sealant

1. Apply adhesive as recommended by sealant manufacturer.

PART 3 EXECUTION

3.1 INSTALLATION

A. Surface Preparation

1. Clean all joint surfaces.
2. Joint walls must be sound, clean dry and, free from oil, grease, and frost.

3. Curing compound residues and any other foreign matter must be thoroughly removed.
4. Where required to completely clean the joint, the joint shall be mechanically cleaned by water or sand blasting.

B. Bond Breaker Installation

1. Install bond breaker or backer rod as specified to regulate depth of sealant.

C. Areas to be Sealed

1. Seal building and any joints or areas which will permit penetration of moisture unless sealing work is specifically required under other Sections and/or as shown on the Drawings.
2. Make all joints watertight.

D. Priming

1. Where required, prime joint surfaces.
2. Limit application to surfaces to receive caulking. Mask off adjacent surfaces.

E. Application

1. Use sufficient pressure to fill all voids and joints solid.
2. Apply sealant when joint slot is at the mid-point of its designed expansion and contraction.
3. Install sealant with hand or power-operated caulking gun horizontally in one direction and vertically from top to bottom.
4. Avoid overlapping of sealant to eliminate entrapment of air.
5. To facilitate tooling, wet concave pointing tool with a diluted soap solution.
6. Apply sealants when the surface and ambient temperature is 40° F or higher and in accordance with the temperature limitations of the manufacturer.

F. Compressible Joint Sealant

1. Install compressible sealant in joint to depth recommended by manufacturer. Take care to avoid contamination of sides of joint.
2. Protect side walls of joint (to depth of sealant) as recommended by manufacturer.
3. Install with adhesive on two faces in contact with sides of joints.

G. Clean Up

1. Dispose of all spillage and refuse sealant material in accordance with applicable regulations.

END OF SECTION

SECTION 26 42 00
SACRIFICIAL ANODE CATHODIC PROTECTION

PART 1 GENERAL

1.1 WORK INCLUDED

A. The CONTRACTOR shall furnish all labor, materials, tools, and equipment and perform all work necessary for complete and operational sacrificial anode cathodic protection system(s) for facilities such as ductile iron piping, steel piping, steel tank bottom, and steel pump station as shown on the Drawings and specified herein.

1.2 REFERENCED STANDARDS:

A. The cathodic protection installation shall comply with applicable requirement codes, laws, and ordinances of Federal, State, and local bodies having jurisdiction.

B. The cathodic protection systems shall comply with the National Association of Corrosion Engineers (NACE) RP-01-69 latest revision.

C. Ductile iron pipe polyethylene encasement shall comply with AWWA Standard C105, "Polyethylene Encasement for Gray and Ductile Cast Iron Piping for Water and Other Liquids".

1.3 SUBMITTALS:

A. The CONTRACTOR shall submit the following items for approval:

1. Category I:

a. Sacrificial Anodes
b. Test Stations and Shunts
c. Exothermic Weld Mastic and Caps
d. Conductors, Cables, and Joint Bond Wires
e. Wire Splice Connectors and Splice Sealing Kits
f. Exothermic Weld Equipment and Materials
g. Wire and Cable Marker Tags
h. Insulating Flange Kits with One-Piece Sleeve and Washers
i. Plastic Warning Marker Tape

2. Category II:

a. Record Drawings

PART 2 MATERIALS

2.1 GENERAL

A. Unless otherwise specified, all materials and equipment shall be of domestic (USA) manufacture and shall be of the best quality used for the purpose in commercial practice.

2.2 STANDARD PRODUCTS

A. Materials and products submitted for approval shall be a product of a manufacturer regularly engaged in the manufacture of the product, shall meet the requirements of the specifications and essentially duplicate materials that have been in satisfactory use for at least two years prior to the bid opening.

2.3 CONDUCTORS

A. Test Station

1. Test station wires shall be #12 AWG and #8 AWG single conductor, stranded copper and may have any of the following insulation types: **RHW, RHH or XHHW**.
2. Wire color-coding shall be as shown on the Drawings and specified herein.

B. Joint Bond

1. Joint bond wires shall be #4 AWG single conductor, stranded copper cathodic protection cable with Type HMWPE insulation.
2. The HMWPE insulation shall comply with ASTM D 1248 and shall be high molecular weight polyethylene, Type I, Class C, Grade 5.

2.4 WIRE SPLICE CONNECTIONS

A. Splice Connectors

1. All splices of anode wires or of test station wires shall be made using a copper, crimpit type connector.

B. Splice Sealing

1. Splices of anode or test station wires (if applicable) shall be sealed using Royston "MINI SPLICE-RITE" cathodic protection splice kits or two half-lapped layers of Scotch 130C followed by two half-lapped layers of Scotch 88 tape

2.5 EXOTHERMIC WELDS

A. All electrical cable connections to the buried piping shall be made by an exothermic weld.

B. Exothermic type weld materials including the proper size and type of weld cartridges and welder molds for use on steel or ductile iron pipe shall be by Erico Products Inc. "CADWELD" or Burndy "THERMOWELD" or other approved equal. Weld metal for ductile-iron pipe shall be XF-19 alloy and weld metal for steel pipe shall have a “CA” designation.

C. Copper sleeves specifically designed for the purpose shall be crimped on all bare wire ends prior to exothermic welding to improve mechanical strength and thermal capacity.

2.6 EXOTHERMIC WELD COATING

A. Exothermic weld coatings for ductile iron pipe shall be a cold applied compound such as Koppers "Bitumastic 50", Royston Mfg. "Roskote A51", or equal.

B. All exposed ductile iron pipe and fittings shall also be encased with polyethylene wrap per AWWA C105. The polyethylene film shall be Type I, Class A, Grade E-1 in accordance with ASTM D 1248.

C. Exothermic weld coatings for steel pipe shall be a cold applied compound such as Koppers "Bitumastic 50", Royston Mfg. "Roskote A51", or equal. In addition, all exothermic welds on steel pipe shall be covered with a weld backfill shield composed of a plastic weld cap specifically made for the purpose and installed in accordance with the manufacturer's directions. The weld caps may be prefilled with mastic by the manufacturer or may be filled in the field with mastic according to the manufacturer's directions. Prefilled weld caps shall be Royston "Handicaps" or equal.

2.7 TEST STATIONS

A. Type

1. Cathodic protection test stations shall be flush-to-ground type Christy G5 Traffic Valve Box (10 3/8” ID x 12”) with a cast-iron lid with “CP TEST” permanently printed on its center.

B. Terminal Board

1. Each test station shall be furnished with a 3/16 inch thick plastic or reinforced laminate terminal block with minimum dimensions measuring three x four inches.

2. The terminal block shall be equipped with five 1/4-inch diameter by 1-inch long brass studs with double brass nuts, flat washers, and lock washers.

3. Test stations shall be equipped with Cott Mfg. 0.01 ohm - 8 ampere shunt (color code -- yellow) as shown on the Drawings. Exception: shunt not required at test stations designated as Insulating Fitting or Pipe Casing type test stations.

2.8 WIRE AND CABLE MARKERS

A. All test station and wires shall be identified using nonmetallic marker tags.

B. Marker tags for wire and cables shall be of an opaque nylon material arranged to include a marking area, nonreleasing holding device, and cable fastening tail similar to Panduit Corporation "Part No. PLF1MA".

C. The marker board shall not be less than 1.0 inches (W) by 0.75 inches (L) and 25 mils thick with one side roughened to hold black nylon marking ink from a fine tip pen similar to Panduit Corporation "Part No. PFX" or 3M Corporation "ScotchCode SMP". Identification shall be permanent and waterproof.

D. The marker-holding device shall be designed to allow the fastening tail to pass around the cable and through the holding device so that removal of the cable marker can be accomplished only by cutting it loose from the cable.

2.9 INSULATING FITTINGS

A. Electrical isolation shall be accomplished through the use of insulating pipefittings as shown on the Drawings.

1. Type

a. Insulating mechanical couplings (IMC) shall be Dresser Style 39-62 or approved equal.
b. Insulating flange kits shall consist of full-faced gaskets, nonmetallic one-piece bolt sleeves and washers, and steel backing washers.

2. Insulating flange Kits

a. Insulating Gaskets shall be Type E (Full Face) Pyrox 1E glass reinforced epoxy or phenolic laminate, 1/8 inch thick, with Buna-N sealing element and shall be rated for the working pressure of the pipe flange.

b. Insulating bolt sleeves shall be one-piece plastic sleeve and washers made of Minlon or acetyl resin. Two piece insulating sleeves consisting of a separate non-metallic sleeve and washers are not acceptable.

c. Backing washers shall be cadmium plated steel, 1/8 inch thick, two for each flange bolt.

3. Restrained IMC

a. In the event an IMC is restrained using tie rods, each tie rod shall be insulated using one-piece rod insulating sleeve and washers and steel backing washers.

2.10 PLASTIC WARNING MARKER TAPE

A. Warning tape shall be a 6-inch wide, 4-mil thick, yellow plastic tape with the words "CAUTION CATHODIC PROTECTION CABLE BURIED BELOW" permanently printed on the tape.

B. The tape shall be resistant to alkalis, acids, and other destructive agents commonly found in soils.

2.11 SACRIFICIAL ANODES

A. Dimensions of the magnesium anodes shall conform to the dimensions for standard sizes of anodes and of the weights specified.

B. All magnesium anodes shall be cast around a galvanized steel core (flat strap or spring) and be made of high potential magnesium alloy conforming to the following compositions by weight:

Aluminum	0.01% Max.
Manganese	0.50% Min. to 1.30% Max.
Zinc	0.005% Max.
Copper	0.02% Max.
Nickel	0.001% Max.
Iron	0.03% Max.
Other Impurities	0.05% Each Max.
Other Impurities	0.30% Total Max.
Magnesium	Balance

C. CONTRACTOR shall furnish spectrographic analyses or a letter of compliance on samples from each heat or batch of anodes used on this project.

D. Sacrificial anodes shall be provided with specific backfill in a permeable cloth sack. Anodes shall be centered in the backfill material. The weight and nominal dimensions of the packaged anode shall be as follows:

32 lb. bare anode (5.0” x 6.0” x 4.4” x 17”) = approx. 74 lb. packaged (8" Dia. X 26"L)

E. The anode package backfill material shall consist of 75 percent gypsum, 20 percent bentonite, and 5 percent sodium sulfate, and shall be of the quick wetting type.

F. All anodes shall be shipped and stored in waterproof bags or wrapping and shall be AMAX "MaxMag", Dow "Galvomag" or equal.

G. Sacrificial anode lead wires shall consist of #12 AWG Type **USE-2 OR RHW-2**, black insulated stranded copper wire. Lead wires shall be a minimum of 30 feet in length. The lead wires shall be connected to the galvanized steel core of the anode by silver soldering and this connection shall be sealed with a waterproof epoxy or electrical potting compound.

PART 3 EXECUTION

3.1 GENERAL

A. The cathodic protection system shall be installed in compliance with the applicable portions of NACE Standard RP-01-69 latest revision.

B. All materials and equipment shall be in accordance with the directions of the manufacturer to conform to the specification documents.

3.2 SACRIFICIAL ANODE INSTALLATION

A. CONTRACTOR shall procure, store and install high potential magnesium anodes as indicated herein.

B. Anodes shall have approved waterproofing protection at all times prior to installation. Damaged anodes or anode wires shall not be used and replacement anodes installed instead. Anode waterproofing protection shall be removed before installing the anode.

C. The specified high potential magnesium anodes shall be installed at the locations indicated herein. Anode locations or spacing may be adjusted slightly to clear

other buried or topographical obstructions with prior approval of the OWNER's representative.

D. The specified magnesium anodes shall be installed completely dry and shall be lowered into the excavated (augured or otherwise) holes as shown on the Drawings by rope sling or by grasping the cloth gather. The anode lead wire shall not be used in lowering the anodes. The anode shall be backfilled with fine native excavated soil (imported sand or other select backfill shall not be allowed) in six-inch layers and each layer shall be hand tamped around the anode. Care must be exercised not to strike the anode or lead wire with the tamper. After the anode has been backfilled approximately halfway, a minimum of ten gallons of fresh water shall be added and allowed to soak into and around the anode. After water absorption by the anode and surrounding soil, continue backfilling and tamping with native soil to a point approximately six inches above the anode. Add another ten gallons minimum of fresh water and allow to soak into the soil. After the water has soaked in, backfilling and soil compaction may be completed to the top of the hole. Anodes shall be installed as shown herein.

3.3 TEST STATIONS

A. The CONTRACTOR shall install cathodic protection test stations as shown on the Drawings and specified herein.

B. Test stations shall be installed directly over the pipe unless otherwise specified.

C. Test station wiring shall be arranged and completed as described herein. Wire connections to the test station terminal boards for conductor sizes of #8 AWG and larger shall be made with single hole terminal lugs of corrosion resistant bronze, copper, or nickel plated brass similar to Blackburn Type L (socket), Square D Company Type LU, Burndy SCRULUG Type KPA or other approved equal.

D. Wire connections to the test station terminal boards for conductor sizes of #14 through #10 AWG shall be terminated with a properly sized uninsulated funnel entry support ring tongue compression connector similar to Panduit PNF or PV Series ring tongue connector, Burndy Type TN or TP Series ring tongue connectors, or other approved equal. Additionally, all wires shall be soldered to the ring tongue connectors.

E. Test station wires shall be color coded as shown on the Drawings and specified herein and each wire shall be permanently identified using nylon marker tags and plastic cable ties. Marker tag identification shall be completed by using a waterproof ink nylon marker pen designed specifically for this purpose and using block type lettering with the letter size to be a minimum of 1/8" high and shall specify test station number, pipe diameter, pipe material, and pipe service.

F. Test Station numbering shall be as indicated on the Drawings.

3.4 WIRE CONNECTIONS TO BURIED PIPING

A. Test station wire and joint bond wire connections to buried piping shall be accomplished by exothermic welding. The surface of the pipe shall be cleaned with a grinder or metal file to a bright, shiny condition. The exothermic weld shall be completed using the appropriate weld charge and welder as per the manufacturer's recommendations. A properly sized copper wire sleeve shall be installed around the bare wire end of all prior to welding to improve weld strength and thermal capacity. Completed welds shall be capable of withstanding moderate hammer blows.

B. The type of weld metal to be used is different for cast iron pipe and steel pipe. The CONTRACTOR shall ensure that the appropriate weld metal charges are used for each type of pipe material.

C. For ductile iron pipe, after cooling, the weld and surrounding cleaned metal surface shall be heavily coated with a cold applied mastic compound. The pipe joint with the installed bond wires shall then be encased in polyethylene wrap.

D. For steel pipe, after cooling, the weld and surrounding cleaned metal surface shall be lightly coated with a cold applied mastic compound or pipeline coating primer and covered with an exothermic weld cap. Pipeline tape wrap shall then be applied as necessary.

3.5 WIRE SPLICE CONNECTIONS

A. Buried splice connections of anode and/or test station wires shall be completed with a splice connection kit specifically designed for that purpose

B. Installation of the splice connection kit shall be completed per the manufacturers instructions with the exception that the wires shall also be soldered to the crimpit connector after tightening.

3.6 ELECTRICAL ISOLATION

A. Electrical isolation of the buried piping shall be accomplished by the use of insulating flange kits or other approved dielectric fittings to be installed at designated locations where as shown on the Drawings.

3.7 JOINT BONDING

A. All ductile iron pipe joints, except those specified to be insulating joints, shall be bonded to ensure electrical continuity.

B. All nonwelded steel pipe joints, except those specified to be insulating joints, shall be bonded to ensure electrical continuity.

C. Two bond wires shall be installed at each joint and shall be stranded copper #4 AWG Type HMWPE as shown on the Drawings.

3.8 TESTS AND MEASUREMENTS

A. Upon completion of the cathodic protection system installation work, the ENGINEER shall perform testing to ensure proper operation of the system.

1. On water storage reservoir projects, initial testing shall be conducted prior to floor slab / floor plate construction.

B. Inadequate pipe joint continuity and/or cathodic protection levels due to defective or incorrect installation work shall be corrected by and at the sole expense of the CONTRACTOR.

END OF SECTION

SECTION 31 05 19
GEOTEXTILE FABRIC

PART 1 GENERAL

1.1 WORK INCLUDED

A. Furnish all labor, materials and equipment required to complete the work of the noted Sections of this Division described herein and on the Drawings.

B. The work shall include, but is not necessarily limited to, placement of a geotextile fabric membrane upon the prepared foundation.

1.2 SUBMITTALS

A. Manufacturer's descriptive literature and recommended methods of installation

B. Manufacturer's certification that products meet specifications

C. Samples

D. Test Samples, Certification and Testing

1. Each roll should be clearly marked showing the top of the fabric. Two copies of the mill certificate signed by a legal authorized officer from the manufacturer shall be provided for each consignment. The mill certificate shall state that the fabric in that shipment meets the requirements listed above and provide proof of test results for minimum average.

2. The ENGINEER reserves the right to perform acceptance tests on the samples prior to acceptance of the material. The minimum average requirements, as indicated, must be met before installation of the geotextile. The ENGINEER will be present at the site during installation and reserves the right to collect samples periodically for confirmation testing.

1.3 QUALITY STANDARDS

A. ASTM (American Society for Testing and Materials) International (ASTM)

1. ASTM 3786, Test Method for Hydraulic Bursting Strength of Textile Fabrics – Diaphragm Bursting Strength Tester Method.

2. ASTM D 3787, Test Method for Bursting Strength of Textiles – Constant-Rate-of-Traverse (CRT) Ball Burst Test.
3. ASTM D 4355, Test Method for Deterioration of Geotextiles by Exposure to Light, Moisture and Heat in a Xenon Arc Type Apparatus
4. ASTM 4491, Test Methods for Water Perneability of Geotextiles by Permittivity
5. ASTM 4533, Test Method for Trapezoid Tearing Strength of Geotextiles.
6. ASTM D 4632, Test Method for Grab Breaking Strength and Elongation of Geotextiles.

PART 2 MATERIALS

2.1 GENERAL

A. The fabric shall have complete resistance to deterioration from ambient temperatures, acid, and alkaline conditions, and shall be indestructible to microorganisms and insects. The material shall be resistant to short-term (until placement) deterioration by ultraviolet light or protected until placement, as recommended by the manufacturer, such that no deterioration occurs. During shipment and storage, the rolls of fabric shall be protected against deterioration from the sun, mud, dirt, dust, and other deleterious conditions at all times.

B. The property values are not design values but represent the minimum accepted physical characteristics of the geotextile required. The number represents a value to be confirmed by the manufacturer. These values represent minimum average roll values (i.e., any roll tested should meet or exceed the minimum values in the table). Manufactured and field seams shall also meet the tabulated values.

2.2 EROSION CONTROL AND DRAINAGE FABRIC

A. Fibers used in the manufacture of geotextiles, and the threads used in joining geotextiles by sewing, shall consist of long chain synthetic polymers composed of at least 85% by weight polyolefins, polyesters, or polyamides. They shall be formed into a network such that the filaments or yarns retain dimensional stability relative to each other, including selvedges.

B. Erosion Control Fabric Properties

PROPERTY	CLASS A	CLASS B	TEST METHOD
Grab Strength, lbs.	200	90	ASTM D 4632
Elongation, (%)	15	15	ASTM D 4632
Sewn Seam Strength, lbs.	180	80	ASTM D 4632
Puncture Strength, lbs.	80	40	ASTM D 3787
Burst Strength, psi	320	140	ASTM D 3786
Trapezoid Tear Strength, lbs.	50	30	ASTM D 4533

Apparent Opening Size, U.S. Standard Sieve	Soil with 50% or less particles by weight passing U.S. No. 200 sieve, AOS less than 0.590 mm	CW-02215-77 mod. to 10 min.
Permittivity	Ψ fabric less than Ψ soil for all classes, sec^{-1}	ASTM D 4491
Ultraviolet Degradation at 150 Hours	70% strength retained for all classes	ASTM D 4355

C. Drainage Fabric Properties

PROPERTY	CLASS A	CLASS B	TEST METHOD
Grab Strength, lbs.	180	80	ASTM D 4632
Elongation, (%)	N/A	N/A	ASTM D 4632
Sewn Seam Strength, lbs.	160	70	ASTM D 4632
Puncture Strength, lbs.	80	25	ASTM D 3787 (5/16 in. hemispherical tip)
Burst Strength, psi	290	130	ASTM D 3786
Trapezoid Tear Strength, lbs.	50	25	ASTM D 4533

Apparent Opening Size U.S. Standard Sieve	Soil with 50% or less particles by weight passing U.S. No. 200 sieve, AOS less than 0.6 mm (greater than #30 U.S. Std. Sieve).	CW-02215-77 mod. to 10 min.
Permeability	k fabric greater than k soil for all classes, cm/sec	ASTM D 4491
Ultraviolet Degradation at 150 Hours	70 % Strength retained for all classes	ASTM D 4355

2.3 ASPHALT FABRIC

A. The asphalt reinforcement geotextile fabric shall be Phillips "Petromat" or approved equal. Fibers used in the manufacture of geotextiles, and the threads used in joining geotextiles by sewing, shall consist of long chain synthetic polymers composed of at least 85% by weight polyolefins, polyesters, or

polyamides. They shall be formed into a network such that the filaments or yarns retain dimensional stability relative to each other, including selvedges.

B. Properties

PROPERTY	VALUES	TEST METHOD
Tensile Strength, lbs.	90	ASTM D 4632
Elongation (%)	55	ASTM D 4632
Burst Strength, psi	200	ASTM D 3786
Trapezoid Tear Strength, lbs.	45	ASTM D 4533

PART 3 - EXECUTION

3.1 EROSION CONTROL AND DRAINAGE FABRIC

A. General

Grade the slope to provide a smooth, even surface. If minor natural soil caving occurs, as determined by the ENGINEER, fill areas with granular material so that the geotextile will not be distorted or torn during material placement. The prepared surface shall be inspected prior to fabric placement.

For placement of the material, care should be taken to avoid puncturing or tearing the geotextile. The material shall be placed over the fabric in sufficient time to prevent UV damage to the fabric as specified by the manufacturer. However, in no case will the fabric remain uncovered or exposed to the elements more than 14 days. Placement of the material should start at the base of the required blanket area, moving up the slope. The material should be placed from the center outward.

B. Repair

A geotextile patch shall be placed over the damaged area and extend three feet beyond the perimeter of the tear or damage.

C. Placement

1. Erosion Control

The geotextile shall be joined by either sewing or overlapping. All seams shall be subject to approval.

Overlapped seams shall have a minimum overlap of 12 inches except where placed under water where the overlap shall be a minimum of three feet.

Pin overlaps may be used using steel security pins, normally 3/16 inch diameter, 18 inches long, and pointed at one end, and fitted with 1 1/2 inch diameter metal washer on the other end. Space pins along all overlap alignments at a distance of approximately three feet center to center. No wrinkles or folds will be allowed in the fabric. If seamed, seam strength shall meet the minimum required fabric grab strength criteria listed.

Overlap successive fabric in such a manner that the upstream sheet is placed over the downstream sheet and/or upslope over downslope. In underwater applications, place the geotextile and required thickness of backfill material the same day. Begin backfill placement at the toe and proceed up the slope.

Riprap and heavy stone filling shall not be dropped onto the geotextile from a height of more than one foot. Slope protection and smaller sizes of stone filling shall not be dropped onto the geotextile from a height exceeding three feet. Replace geotextile damaged during placement as directed.

2. Drainage

In trenches, after placing the backfill material, the geotextile shall be folded over the top of the filter material to produce a minimum overlap of 12 inches for trenches greater than 12 inches wide. In trenches less than 12 inches in width, the overlap shall be equal to the width of the trench. The geotextile shall then be covered with the subsequent backfill.

3.2 ASPHALT FABRIC

A. Equipment

1. Fabric Lay Down Equipment

Mechanical lay down equipment must be capable of handling full rolls of fabric, and shall be capable of laying the fabric smoothly, without excessive wrinkles and/or folds. When manual lay down is required, a length of standard one inch pipe, together with suitable roll tension devices, are required for proper roll handling.

2. Miscellaneous Equipment

Stiff bristle brooms to smooth the fabric and scissors (or blades) to cut the fabric should be provided. Under some conditions a pneumatic roller to imbed the fabric into the asphalt sealant may be needed.

B. Installation

1. Surface Preparation

The surface on which the fabric is to be placed should be free of dirt, water and vegetation. Cracks between 1/8 inch and 1/4 inch must be filled with a suitable filler as directed by the ENGINEER. Larger cracks or holes must be repaired with slurry, hot mix, or other suitable fillers. In some cases a leveling course may be specified prior to placing the fabric.

2. Application of Sealant

The asphaltic sealant must be uniformly spray applied at the specified rate. Quantity specified will vary with the surface condition of the existing pavement (degree of porosity, for example) but will normally be applied at the target rate of 0.25 gallons per square yard (gsy) residual asphalt.

Application will be by distributor equipment wherever possible, with hand spraying kept to a minimum. Temperature of the asphalt must be sufficiently high to permit a uniform spray pattern. For asphalt cements, the minimum recommended temperature is 290° F. (NOTE: If the fabric is oversprayed, distributor tank temperatures should not exceed 325° F to avoid damage to the fabric). For emulsions, temperature of the heavier grades may be as high as 160° F to insure an optimum spray pattern.

The target width of the asphalt sealant application should be fabric width plus two to six inches. Asphalt drools or spills should be cleaned from the road surface to avoid flushing and possible fabric movement at these asphalt-rich areas.

The quantity of asphalt applied to the fabric is extremely important. The object is to fully seal the membrane, but not to use an excessive quantity which might cause a slippage plane.

3. Fabric Placement

The fabric shall be placed into the asphaltic sealant with a minimum of wrinkles prior to the time the asphalt has cooled and lost tackiness. (NOTE: When emulsions are used, allow adequate cure time before placing fabric). The fabric is unrolled so that the bearded (fuzzy) side is

unwound into the sealant, thus providing optimum bond between fabric and pavement during the construction process.

As directed by the ENGINEER, wrinkles severe enough to cause "folds" shall be slit and laid flat. Brooming or pneumatic rolling will maximize fabric contact with the pavement surface. Small wrinkles which flatten under compaction are not detrimental to performance.

Overlap of fabric joints should be minimal, although an overlap of one to three inches is recommended to insure full closure of the joint. Transverse joints should be "shingled" in the direction of paving to prevent edge pick-up by the paver. As directed by the ENGINEER, additional sealant of about 0.20 gsy should be applied to fabric joints.

4. Hot Mix Overlay

Placement of the hot mix overlay should closely follow fabric lay down. In the event that the sealant bleeds through the fabric before the hot mix is placed, it may be necessary to blot the sealant by spreading sand or hot mix over the affected areas. This will prevent any tendency for construction equipment to pick up the fabric when driving over it.

Refer to Section 02513 - Bituminous Pavement for complete execution details.

C. Special Considerations

1. Ambient Temperatures

Air temperatures during fabric installation should be warm enough to allow adequate "tack" from the asphalt sealant to hold the fabric in place. A rule-of-thumb minimum temperature for most asphalt cements is 50° F.

2. Asphalt Sealant Quality

The correct asphalt application rate should be based on the quantity of residual asphalt in the material specified, and porosity of the surface to be covered. Generally, this will approximately 0.25 gsy residual asphalt; but depending upon pavement condition, may vary between 0.20 to 0.30 gsy.

3. Tack Coat

It is usually not necessary to tack coat the fabric prior to placement of a premix overlay. However, there may be circumstances such as delay of overlay, dust accumulation, under-application of sealant, or sanding and

trafficking which would make application of a tack coat desirable. This decision should be made by the ENGINEER.

Where seams are required in the longitudinal trench direction, they shall be joined by either sewing or overlapping. Overlap successive sheets of geotextiles a minimum of 12 inches. All seams shall be subject to approval.

END OF SECTION

SECTION 31 11 00
CLEARING AND GRUBBING

PART 1 GENERAL

1.1 SCOPE OF WORK

A. This work includes all materials, equipment, and labor required for completed clearing and grubbing operations required for completion of other items of work.

B. Clearing includes for example, the removal of trees, brush, debris such as slash piles, abandoned utility poles, landscaping and vegetation from defined areas.

C. Grubbing includes work such as, the removal of stumps and roots obstructions to a minimum of three feet below proposed subgrade and related work. This work includes backfill of holes created by grubbing operations with approved on-site materials.

D. The work also includes tree trimming as required to complete other items of work and protection of all trees, which are not designated for removal. All waste materials shall be removed from the site and legally disposed of by and at the sole expense of the CONTRACTOR.

E. Removed materials, such as stumps and trees, shall not be buried in the backfill.

F. Burning of cleared and grubbed vegetation and trees on site is not permitted.

G. For removal of structures and obstructions including items such as concrete foundations, inlets, pavement, curb and gutter, sidewalks, ditch and slope paving, manholes, guardrail, fence, signs and pipe, see SECTION 02 40 00 – REMOVAL OF STRUCTURES AND OBSTRUCTIONS.

PART 2 PRODUCTS – NOT USED

PART 3 EXECUTION

3.1 CLEARING

A. Remove trees and shrubs and other vegetation called for on the Drawings or as designated in the field. Except for staging areas and construction access roads, disturbance will be limited to the excavation area required for the structure.

B. Make all reasonable efforts to minimize the area of disturbance. Aside from staging areas, the maximum area of disturbance will be 10 feet beyond the excavation slope intercept point. Unless otherwise permitted in writing by the OWNER and ENGINEER no disturbance or construction activity will be allowed outside the above area.

C. Prior to construction the OWNER and ENGINEER will meet with the CONTRACTOR to determine the area(s) required for construction staging. After an agreement is reached regarding the construction staging area size(s) and location(s) the CONTRACTOR shall identify all trees and shrubs to be removed from the staging area(s) by marking the trees with orange paint. The CONTRACTOR may submit a written request for additional construction area when warranted by conditions. The written request must state the reasons for the request and the extent and size of additional area(s) requested.

3.2 GRUBBING

A. Removal of shrubs, stumps and trees shall include sufficient depth of the root system to ensure that vegetation will not continue to grow, a minimum of three feet below existing grade. All holes left after the removal of stumps shall be backfilled with native material and compacted. The resulting unsuitable debris shall be hauled and disposed of by the CONTRACTOR at an off-site location acceptable to and at no additional cost to the ENGINEER and the OWNER. Woody debris such as limbs, small diameter logs, etc. may be chipped/ground into wood chips for mulch and revegetation purposes.

B. Some trees may be identified to remain within the construction area. Trees scheduled to remain shall be carefully protected from damage during construction operations by orange safety fence placed a minimum of 3 feet in radius from the tree trunk. Any damage due to the CONTRACTOR’s operations shall be repaired by suitable tree surgery methods reviewed and accepted by the ENGINEER or the damaged trees shall be replaced in kind as requested by the ENGINEER, all at the CONTRACTOR’s expense.

END OF SECTION

SECTION 31 23 00
EXCAVATION AND FILL

PART 1 GENERAL

1.1 WORK INCLUDED

A. Excavation and fill earthwork includes removing of vegetation and designated trees, stripping, stockpiling and placing of designated materials such as topsoil, excavating, scarifying, grading, segregating, and placing on-site, and imported fill materials. This includes incidental operations such as hauling, placing, discing, soil moisture control, and compacting to the lines and grades shown in the Drawings. Also included is the disposal of excess excavated or unacceptable materials and borrow of materials to make up deficiencies for fills in accordance with this Specification.

B. Furnish labor, materials, tools, equipment, and perform all work and services for excavating, over excavating, borrowing, removing undesired or excess materials, filling and backfilling of the soils under, adjacent to and above structures shown in the Drawings, in accordance with the Contract Documents. This work includes, but is not limited to, excavation and structural fill for building and special foundations, box culverts, bridge substructures, manholes, vaults, retaining walls, and hydraulic structures.

C. Compaction testing will be accomplished per SECTION 01 71 23 - FIELD ENGINEERING, MATERIALS TESTING AND SURVEYING.

1.2 QUALITY STANDARDS

A. American Society for Testing and Materials (ASTM)

1. ASTM D 422, Method for Particle-Size Analysis of Soils
2. ASTM D 698, Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft^3)
3. ASTM D 1556, Test Method for Density of Soil in Place by the Sand-Cone Method
4. ASTM D 1557, Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft^3)
5. ASTM D 2487, Classification of Soils for Engineering Purposes
6. ASTM D 2922, Test Methods of Density of Soil and Soil-Aggregate in Place by Nuclear Methods (Shallow Depth)
7. ASTM D 4253, Test Methods for Maximum Index Density of Soils Using a Vibratory Table

8. ASTM D 4254, Test Methods for Minimum Index Density of Soils and Calculation of Relative Density
9. ASTM D 4318, Test Method for Liquid Limit, Plastic Limit and Plasticity Index of Soils

B. Colorado Department of Transportation (CDOT)

1. (CDOT) Specifications for Road and Bridge Construction

1.3 SUBMITTALS

A. Particle-Size Analysis and Proctor Test Results for:

1. Native fill materials
2. Imported fill materials

B. Particle-Size Analysis and Proctor Test Results for:

1. Native structural fill materials
2. Imported structural fill materials

C. Submit a plan outlining the means and methods of placing fill on roofs of structures for the ENGINEER's review.

1.4 SOIL CONDITIONS

A. A geotechnical investigation may have been performed for the OWNER in order to obtain relative data concerning the character of material in and upon which the project is to be built. If an investigation has been performed, the information will be available to the CONTRACTOR for information purposes only, and is not to be considered a part of the Contract Documents. The CONTRACTOR shall satisfy himself as to the kind and type of soil to be encountered and any water conditions that might affect the construction of the project.

B. Perform all excavation regardless of the type, nature, or condition of material encountered, as specified, shown, or required in order to accomplish the construction.

C. A geotechnical engineer may or may not be retained by the OWNER to review the fill and structural fill placements. The expense of these services will be borne by the OWNER.

1.5 SPECIAL REQUIREMENTS

A. The location of existing utilities is shown in an approximate way only and not all utilities may be shown. The CONTRACTOR shall determine the exact location of all existing utilities prior to commencing work.

B. Be responsible for any and all damages that might be occasioned by his failure to exactly locate and preserve any and all utilities. If utilities are to remain in place, the CONTRACTOR shall provide adequate means of support and protection during construction.

C. Should drawn, or incorrectly drawn, piping or other utilities be encountered during excavation the CONTRACTOR shall advise the ENGINEER within 30 minutes of encountering the utility.

D. Cooperate the with ENGINEER and utility companies in keeping respective services and facilities in operation to the satisfaction of the respective owners.

E. The OWNER reserves the right to perform any and all work required should the CONTRACTOR fail to cooperate with the respective companies, and back charge the CONTRACTOR for any and all expenses.

F. Protect all monuments, benchmarks, and other reference points to be used to construct foundations. Reference points disturbed that require restaking will be restaked by the ENGINEER at the CONTRACTOR's expense.

G. Conduct all site grading operations and other construction activities to minimize erosion of site soil materials.

H. Provide barricades and signs in accordance with the Uniform Manual of Traffic Control Devices where applicable. The CONTRACTOR shall maintain all devices in a working manner. See SECTION 01 55 26 – TRAFFIC CONTROL.

I. Maintain streets daily removing any spillage of dirt, rocks or debris from equipment entering or leaving the site. See SECTION 01 74 16 – SITE MAINTENANCE.

PART 2 - PRODUCTS

2.1 TOPSOIL

A. Topsoil shall be defined as the top four inches of the native soil profile or as directed in the field by the ENGINEER.

B. Topsoil that is to be later replaced shall be free from roots, brush, weeds, debris, and stones larger than one inch in diameter.

2.2 FILL CLASSIFICATIONS

A. General

1. Materials used in any classification of fill shall be free from frozen lumps, wood, or other organic, trash, debris or other material that would otherwise adversely affect the performance of the fill.
2. Unless otherwise specified or shown in the Drawings, Class 2 materials shall be used for fills.

B. Class 1

1. Class 1 fill materials shall meet the following gradation requirements:

Sieve Size	% By Weight Passing Square Mesh Sieves
2 inch	100
No. 4	30 - 100
No. 50	10 - 60
No. 200	5 - 20

2. In addition this material shall have a liquid limit not exceeding 35, and a plasticity index of not over six, when determined in conformity with ASTM D 4318.
3. The CONTRACTOR has the option of using on-site or imported materials that meet the above gradation limits.

C. Class 2

1. Class 2 fill material shall be composed of suitable materials developed on the project site or imported if insufficient quantities are available.
2. Rocks larger than six inches are unacceptable.

D. Class 3

1. When the Drawings show specific areas for clay fill the clay soils shall be classified as CL by ASTM D 2487.

PART 3 EXECUTION

3.1 TOPSOIL

A. Topsoil shall be stripped from the area to be disturbed and stockpiled.

B. Topsoil stockpiles shall be properly protected from erosion by wind and water and shall be clearly marked with a sign as topsoil.

C. Upon completion of all filling, backfilling and compaction, topsoil shall be uniformly distributed over area disturbed by excavation and grading activities.

D. Care shall be taken to conform to the final required grades.

3.2 EXCAVATION

A. Excavation includes the removal of all materials of whatever nature encountered, including obstructions that interfere with the proper execution of the work. The removal of materials shall conform to the lines and grades shown in the Drawings.

B. Unless otherwise shown in the Drawings or specified herein, the site shall be stripped of all vegetation, such as bushes and debris. However, no trees other than those designated shall be removed. This vegetation shall be removed from the site prior to performing any excavation or placing any fill.

C. Excavations for structures shall be made to the elevations and dimensions shown on the Drawings. If no dimensions and elevations are shown on the Drawings, the CONTRACTOR shall provide a safe excavation in accordance with applicable OSHA regulations and shall provide adequate space for construction operations and review of structure construction.

D. Remove obstructions including but not limited to old foundations, pipe, unsuitable subgrade soils, and any other materials which may be concealed beneath the present grade, as required to construct an acceptable grade for the structure.

E. If required by the Drawings or specified herein, excavated materials shall be classified in accordance with ASTM D 2487 and placed in Class 1 or Class 2 stockpiles for use during construction of fill.

F. Boulders larger than one cubic yard in volume shall be stockpiled for use in site landscaping when called for in the Specifications, shown in the Drawings or directed by the ENGINEER.

G. After the required excavation has been completed the exposed surface shall be proof-rolled with compaction equipment to obtain 95% of maximum density as

determined by ASTM D 698. The surface shall be reasonably smooth for placement of the underlying fill.

3.3 FILL CONSTRUCTION

A. Construct fills to lines and grades shown or specified. The fill shall be placed in continuous horizontal layers not exceeding eight inches in loose thickness. Where hand operated compaction equipment is used, the layers shall not exceed six inches in loose thickness.

B. When the soil moisture content is below the optimum moisture content water shall be added before or during spreading until the proper moisture content is achieved.

C. Where the soil moisture content is too high to permit the specified degree of compaction, the material shall be disced and worked until it has dried to the proper moisture content.

D. Protect the fill against freezing when atmospheric temperature is less than 35° F. (1° C). Foundations and fills that have been allowed to freeze shall be removed to the depth of freezing, replaced, and recompacted.

E. Exercise caution to prevent damaging any perimeter and foundation perforated pipe drain systems when constructing fills.

3.4 OVEREXCAVATION FOR STRUCTURES:

A. Water Retaining Structures

1. Unless otherwise shown in the Drawings, areas beneath water retaining structures shall be overexcavated a minimum of five feet.
2. The overexcavation shall extend a minimum of five feet beyond the outside edge of the footing.

B. Buried Vaults

1. Unless otherwise shown in the Drawings, areas beneath buried vaults shall be overexcavated a minimum of two feet.
2. The overexcavation shall extend a minimum of two feet beyond the outside edge of the footing.

C. Other structures

1. Overexcavate subgrade soils, as required or as shown on the Drawings, which in the opinion of the ENGINEER are undesirable or unsuitable for foundation support.

3.5 FOUNDATION PREPARATION FOR STRUCTURES

A. The CONTRACTOR is responsible for protecting all monuments, benchmarks, and other reference points to be used to construct foundations. Reference points disturbed that require restaking will be restaked by the ENGINEER at the CONTRACTOR's expense.

B. Where foundations are to rest on rock, the rock shall be fully exposed and the surface of the rock shall be leveled off to approximate horizontal and vertical steps and roughened.

C. Where foundations are to rest on subgrade material other than rock, care should be taken to avoid disturbance of the bottom of the excavation. Soils loosened during excavation shall be removed from the excavation, and the excavation restored to a condition at least equal to the undisturbed subgrade.

D. The excavation for foundations to be supported by piles or drilled piers, shall be completed to the bottom of the foundations before any piles a driven or drilled, and any excess materials remaining after drilling or driving shall be removed to the elevation of the bottom of the foundation.

E. Completed excavations shall be protected from becoming unacceptable including but not limited to becoming wet, frozen, or soft due to weather, and or construction operations. Grading around excavations for structures shall be performed to prevent water from running into the excavation or from damaging completed foundations. Should any free water, ground water, or springs be encountered, the CONTRACTOR shall be required to keep excavations free from water during construction of the foundations by the use of trenches, well points, or other means as reviewed and accepted by the ENGINEER.

F. Shore, sheet pile, slope, and/or brace excavations as required to maintain a safe site and to conform to all local, State, or Federal agency regulations having jurisdiction over the work. The CONTRACTOR is fully and solely responsible for maintaining safe working conditions during construction.

G. Use a membrane or methods of construction to prevent the excavated surface from changing moisture content. This is especially critical with clay soils and clay bedrock.

H. Notify the ENGINEER as soon as excavations are completed in order that subgrade may be reviewed.

3.6 FILL FOR STRUCTURES

A. Fill structural overexcavations using materials specified herein or in the Drawings to lines and grades shown. The structural fill shall be placed in continuous horizontal layers not exceeding eight inches in loose thickness.

B. Begin fill work immediately to prevent the excavated surface from changing moisture content.

C. Fill shall not be placed until the foundations or other portions of the structure have been reviewed by the ENGINEER and accepted for backfilling. No structural fill shall be deposited against structure walls, abutments, and retaining walls until the structure has reached the strength necessary to sustain backfill and other anticipated loads.

D. When permitted by the ENGINEER, footings may be backfilled to a level equal to the top of the footings or berm elevation where appropriate, upon removal of the forms.

E. Foundations for rigid frame structures or walls or abutments which are not designed as self-sustaining against soil and backfill loads shall not be backfilled unless the superstructure has been placed and reach a strength necessary to sustain the anticipated loads.

F. Foundations shall not be backfilled until the area involved has been cleared of all falsework, sheet piling, cribbing, shoring, bracing, forms, and debris.

G. Existing slopes shall be stepped, terraced, or otherwise treated as necessary to prevent slippage and wedging of the structural fill.

H. Backfill shall be brought up uniformly on all sides of structure walls and not vary by more than one foot.

I. Unless otherwise provided, fill for structures shall be placed in continuous horizontal layers not more than eight inches in thickness that are brought up uniformly on all sides of the foundation. Each layer shall be compacted before the next layer is placed, by means of rollers, tampers or vibrators. Backfilling operations shall be performed to minimize live load and compaction effort surcharges to the foundation. Backfill operations shall be performed in such a manner that no portion of the foundation or structure is damaged or deflected out of alignment. All fill for structures shall be compacted in accordance with the densities

shown on the Drawings or indicated in this Specification, but not less than 95% of maximum density as determined by ASTM D 698.

J. If water is present in the excavation, backfill operations shall be so performed such that the water will be displaced by the fill and not trapped therein. Water shall not be used to expedite settlement of fill. Compaction by jetting is unacceptable.

K. Backfill materials transported in trucks or other vehicles shall be placed so that the contents of each vehicle are carefully and gradually deposited. All clams, dippers, or containers of fill for structures shall be lowered to within five feet of the surface of the previously deposited fill before they are dumped.

L. Protect the fill against freezing when atmospheric temperature is less than 35° F. (1° C).

3.7 SPECIAL PROVISIONS FOR BURIED WATER RETAINING STRUCTURES AND VAULTS

A. Unless otherwise permitted in writing by the ENGINEER, water storage tank wall backfilling and site grading near the structure shall be performed with the tank filled to the overflow level, .

B. Unless otherwise specified or shown in the Drawings, earthmoving and compaction equipment weighing more than 10,000 pounds, including water trucks, shall not used closer to water retaining structures and vault walls than a horizontal distance equal to the depth of the fill at that time.

3.8 COMPACTION

A. Density Requirements

1. Compact soil to not less than the following percentages of maximum density relationship determined in accordance with ASTM D 698 (Standard Proctor) unless otherwise shown in the Drawings:

    a. Foundations, Paved Areas and Sidewalks - 95%
    b. Unpaved Areas - 90%
    c. Topsoil - 80%
    d. Structural Fills - 95%
    e. Fills Adjacent to Water Retaining Structure Walls - 90%

B. Moisture Requirements

1. Control moisture content within two percent of optimum moisture content.
2. Where subgrade or layer of soil material must be moisture conditioned before compaction, uniformly apply water to surface of cut area subgrade, or loosely placed layer of soil material, to prevent free water appearing on surface during or subsequent to compaction operations.
3. Remove and replace, or scarify and air dry, soil material that is too wet to permit compaction to specified density. Soil material that has been removed because it is too wet to permit compaction may be stockpiled or spread and allowed to dry. The CONTRACTOR may assist drying by discing, harrowing or pulverizing until moisture content is reduced to a satisfactory value.
4. During construction of floor slabs on structural fills, the moisture content of the structural fill shall be maintained and not permitted to dry out.

3.9 SETTLEMENT

A. Where completed compacted areas are disturbed by subsequent construction operations or adverse weather, the CONTRACTOR shall scarify the ground surface, re-shape, and compact to required density prior to further construction.

B. Any settlement in fill or structural fill which occurs within the one-year guarantee period in the General Conditions will be considered to be caused by improper compaction methods and shall be corrected at no cost to the OWNER. Any structure damaged by settlement shall be restored to their original condition by the CONTRACTOR at no cost to the OWNER.

C. Place soil above the final grade to compensate for anticipated settlement if proper drainage can be maintained and when permitted by the ENGINEER.

3.10 GRADING

A. Perform all grading to the lines and grades as shown on the Drawings and/or established by the ENGINEER, with an allowance for topsoil where required. Stockpiled topsoil shall be placed to a uniform depth of four inches, or the uniform depth the volume of stockpiled topsoil will permit, in areas to be revegetated.

B. Shape, trim, and finish slopes of channels to conform to the lines, grades, and cross sections as shown or approved. All slopes shall be free of all exposed roots and stones exceeding three inches in diameter that are loose and liable to fall. Tops of banks shall be rounded to circular curves not less than six feet in radius. Rounded surfaces shall be neatly and smoothly trimmed.

3.11 BOULDER PLACEMENT

A. When called for in the Specifications or shown in the Drawings the CONTRACTOR shall place stockpiled boulders as directed by the ENGINEER or as shown in the Drawings.

3.12 DISPOSAL OF EXCESS EXCAVATION AND WASTE MATERIALS

A. When permitted by the ENGINEER or the OWNER, the CONTRACTOR may dispose of all excess excavated material not required on site.

B. Remove and legally dispose of excess materials not permitted to be disposed of on site. The ENGINEER may request written confirmation from the OWNER of the property where excess and waste materials are deposited.

END OF SECTION

SECTION 31 23 18
TRENCHING, BEDDING AND BACKFILLING FOR TAPE COATED STEEL PIPE

PART 1 GENERAL

1.1 GENERAL

A. Earthwork shall include all excavation, backfill, excess excavation, bedding and pipe zone material, and surface restoration as indicated on the Plans or in the Specifications as required to complete the work. The CONTRACTOR shall furnish all labor, materials, plant, tools, and equipment required to complete the earthwork.

B. Topsoil, as defined on the Drawings or directed by the ENGINEER, shall be removed from the area of general disturbance and stockpiled. After installation of all pipelines, appurtenances and structures and completion of all backfill and compaction, the stockpiled topsoil shall be redistributed evenly over all disturbed areas. Care shall be taken to conform to the original ground contour and final grading shall be done as directed by the ENGINEER.

C. Survey control for alignment and grade and compaction testing will be accomplished per SECTION 01 71 23 - FIELD ENGINEERING, MATERIALS TESTING AND SURVEYING.

1.2 QUALITY STANDARDS

A. American Society for Testing and Materials (ASTM)

1. ASTM D 422, Method for Particle-Size Analysis of Soils
2. ASTM D 698, Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft^3)
3. ASTM D 1556, Test Method for Density of Soil in Place by the Sand-Cone Method
4. ASTM D 1557, Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft^3)
5. ASTM D 2487, Classification of Soils for Engineering Purposes
6. ASTM D 2922, Test Methods of Density of Soil and Soil-Aggregate in Place by Nuclear Methods (Shallow Depth)
7. ASTM D 4253, Test Methods for Maximum Index Density of Soils Using a Vibratory Table
8. ASTM D 4254, Test Methods for Minimum Index Density of Soils and Calculation of Relative Density

9. ASTM D 4318, Test Method for Liquid Limit, Plastic Limit and Plasticity Index of Soils

B. Colorado Department of Transportation Specifications for Road and Bridge Construction (CDOT)

1.3 SUBMITTALS

A. Bedding Material

1. A minimum of 10 days prior to the start of construction, the CONTRACTOR shall submit to the ENGINEER for approval, a sample of not less than 30 pounds of the pipe bedding and pipe zone material that is proposed to be used.
2. If more than one source is to be used, a sample shall be submitted from each source. The source of each sample shall be stated, and after approval of the pipe bedding and pipe zone material, no change shall be made in the source of the material or gradation thereof without written approval of the ENGINEER.
3. The testing of proposed pipe bedding and pipe zone material will be made by the ENGINEER at no expense to the CONTRACTOR.

PART 2 MATERIALS

2.1 BEDDING MATERIAL

A. Tape Coated or Coal-Tar Enamel Coated Steel Pipe

1. The bedding and pipe zone material shall be clean, well-graded, free-draining sand with no clay fines and shall conform to the following limits when tested by ASTM D 422:

Total Passing by Sizes	
Sieve Size	Percentage by Weight
3/8-inch	100
No. 4	70 - 100
No. 8	36 - 93
No. 16	20 - 80
No. 30	8 - 65
No. 50	2 - 30
No. 100	1 - 10
No. 200	0 - 3

2. Although not a requirement, it may be necessary to provide washed material in order to meet fully the specification. If washing is necessary, it shall be at the CONTRACTOR's expense.

2.2 SPECIAL BEDDING FOR TRENCH FOUNDATION STABILIZATION

A. Washed rock uniformly graded between 1-inch and 1 1/2-inches

PART 3 EXECUTION

3.1 EXCAVATION

A. General

1. All excavation shall be made to the lines and grades shown on the Plans and as established by the ENGINEER.
2. Stockpiling of the excavated material required for backfilling and grading will be permitted on all available areas provided the place, the extent and the height of stockpile is approved by the ENGINEER.

B. Trench Excavation

1. The trench shall be excavated to a minimum depth of six inches and a maximum of eight inches below the bottom of the pipe.
2. The sides of the trench shall be excavated and maintained as nearly vertical as practical and shall be in accordance with the Occupational Safety and Health Administration (OSHA) regulations.
3. The trench width at the bottom and at the top of the pipe shall be a minimum of 24-inches plus the outside diameter of the pipe, and a maximum of 36-inches plus the outside diameter of the pipe.

C. Trench Support

1. The trench shall be adequately supported and the safety of workers provided for as required by OSHA. Sheeting and shoring shall be utilized where required to prevent any excessive widening or sloughing of the trench which may be detrimental to human safety, to the pipe or appurtenances being installed, to existing utilities, to existing structures, or to any other existing facility or item. Where excavations are made under severe water conditions, the CONTRACTOR shall use sheet piling approved by the ENGINEER instead of sheeting and shoring.

2. Excavated material and equipment shall not be placed closer than as permitted by 29 CFR 1926.651.

D. Pipe Connections

1. The excavation shall be of such dimensions as to permit construction of the necessary pipe connections.
2. Care shall be taken to insure that the excavation does not extend below established lines and grades. If the excavation extends below such lines, the CONTRACTOR shall fill in the resulting excess excavation with material suitable for compaction, or graded gravel, deposited in horizontal layers of not more than 6-inches in thickness after being compacted. The material shall be moistened as required to obtain the optimum required for compaction. After each layer has been conditioned to have the optimum moisture content, it shall be compacted by mechanical tampers or other method as approved by the ENGINEER. The CONTRACTOR may fill in the over excavated area with concrete provided it is approved by the ENGINEER.

E. Surplus Excavation

1. All surplus excavated material shall be removed from the jobsite by the CONTRACTOR at the CONTRACTOR's expense.
2. Locations for the disposal of all surplus material shall be provided by the CONTRACTOR. Written permission shall be obtained by the CONTRACTOR and a copy of said permission shall be furnished to the ENGINEER before disposal of any excess material. The OWNER relinquishes all right and title to the surplus material.

3.2 FOUNDATION AND BEDDING

A. Dewatering

1. The CONTRACTOR shall provide and maintain at all times during construction ample means and devices with which to promptly remove and properly dispose of all water from any source whatsoever entering the trench or structure excavation or other parts of the work.
2. All pipe trenches shall be kept free of water during excavation, pipe laying and jointing. The method of dewatering shall maintain a free water surface below the bedding material.
3. Dewatering shall be accomplished by the use of well points, sump pumps, rock or gravel drains placed below subgrade foundations or subsurface pipe drains. Any dewatering method shall be subject to the approval of the ENGINEER.
4. The CONTRACTOR shall dispose of the water in a suitable manner without damage to adjacent property or without being a menace to public health

or without causing a public inconvenience or nuisance. The water shall not be drained into work completed or under construction.

5. The dewatering operation shall continue until such time that it is safe to allow the water table to rise in the excavations. Pipe trenches shall contain sufficient backfill to prevent pipe flotation. Water shall not be allowed to rise unequally against concrete walls for a period of 14 days following placement of the concrete.

B. Special Foundation

1. If the bottom of the excavation is soft or unstable after dewatering, and, in the opinion of the ENGINEER, cannot satisfactorily support the pipe or structure, further depth and/or width shall be excavated. The over excavated area shall be refilled to 6-inches below the bottom of the pipe or to the underside of the structure with clean, washed rock uniformly graded between 1-inch and 1 1/2-inches to assure a firm foundation for the pipe or structure.
2. No over excavation or refill of over excavated areas shall be undertaken by the CONTRACTOR without the written authorization of the ENGINEER, which authorization shall specifically state the extent and distance (by station) over which over excavation and refill may take place.
3. If the CONTRACTOR over excavates and refills over excavated areas without the prior written authorization of the ENGINEER, it will be conclusively presumed that this was done solely for the benefit of the CONTRACTOR and the cost of such work shall be at the CONTRACTOR's expense.

3.3 PIPE BEDDING AND PIPE ZONE

A. The limits of bedding and pipe zone materials shall be from 6-inches below the bottom of the pipe to 6-inches above the top of the pipe. Approved backfill extends from the top of the pipe zone to the ground line

B. After completion of the trench excavation and proper preparation of the foundation, 6-inches of bedding material shall be placed on the trench bottom for support of the pipe.

C. Bell holes shall be dug to provide proper clearance between the pipe bell and the bedding material to allow for inspection and finishing of the joint.

D. All pipe shall be installed in such a manner as to insure full support of the pipe barrel over its entire length.

E. Compaction of bedding is not required. The only requirement is sufficient tamping to achieve uniform support under the pipe.

F. After the pipe is adjusted for line and grade and the joint is made up, the remainder of the material in the pipe zone shall be placed to the limits as shown on the Drawings.

G. Material in the pipe zone shall be placed in equal lifts not exceeding 6-inches in thickness before compaction. The lifts shall be to approximately the same elevation on both sides of the pipe to prevent unequal loading and displacement of the pipe.

G. All pipe zone material shall be compacted by jetting and vibrating to obtain 70 percent relative density as determined by ASTM Designations D 4253 and D 4254. Special precautions shall be taken to prevent flotation of the pipe.

H. The bedding and pipe zone material shall be installed so that the total pipe deflection in any direction shall not exceed the allowable deflections shown in SECTION 02512 – STEEL PIPE. If the allowable deflection is exceeded at any time, the CONTRACTOR shall expose and re-round the pipe, repair all damaged lining and coating and reinstall bedding, pipe zone material and backfill as specified, at no additional expense to the OWNER.

3.4 BACKFILL AND COMPACTION

A. When suitable select material is available from the excavation, as determined by the ENGINEER, it shall be used for pipe backfill.

B. Wet, soft or frozen material, asphalt chunks, trash, tree limbs and/or other deleterious substances shall not be permitted in the backfill material. Unsuitable excavated material shall be hauled away and disposed of at the CONTRACTOR's expense and suitable material shall be hauled in from other parts of the project at the CONTRACTOR's expense.

C. Backfilling shall be conducted at all times in a manner to prevent damage to the pipe or structure. Rocks or stones larger than 3-inches in maximum dimension shall not be placed closer to the pipe or structure than 6-inches.

D. No heavy equipment of any nature shall be permitted to cross the pipeline before the backfilling has been completed in accordance with these Specifications.

E. Tamping Equipment shall be subject to the approval of the ENGINEER, and no large rollers or tractor-drawn equipment shall be used without prior approval of the ENGINEER.

F. All backfill shall be carefully placed and spread in uniform layers so that all voids will be filled.

G. The thickness of each horizontal layer after compaction shall not be more than 6-inches. The placing of the layers shall be such that throughout the required section the material will be homogeneous, free from lenses, pockets, streaks, laminations, moisture variations or other imperfections.

H. The trench shall be backfilled to the limits shown on the Drawings or as required by the excavation. All backfill material shall be compacted by vibrating, tamping, or any combination thereof, to obtain 70 percent relative density as determined by ASTM Designations D 4253 and D 4254 or to 95 percent of maximum density as determined by ASTM Designation D 698.

I. Prior to and during compaction, the backfill material shall have a moisture content within two percent, plus or minus, of optimum moisture, as determined by ASTM D 698. If the moisture content is not within these limits, the CONTRACTOR shall take whatever steps are necessary to bring the moisture content to within two percent of optimum.

3.5 PROGRESS OF WORK

A. Open Trench Allowed

1. The maximum amount of open trench allowed ahead of pipe laying operations shall be that amount which, in the opinion of the ENGINEER, is reasonable and prudent for conditions existing at any particular location. That amount may be as little as 60 feet at some locations.
2. It is not the intention of this Specification to impede the CONTRACTOR's progress; however, the ENGINEER will determine the amount of open trench allowed.

B. Backfilling of Pipe

1. The complete backfilling operation to the finished grade, including cleanup operations, shall be prosecuted on a continuous daily basis and shall follow within 150 feet of pipe installation.
2. At the end of each day, pipe zone material and pipe backfill shall cover the installed pipe sufficiently to protect the coating and lining of the installed pipe and to prevent flotation of the pipe.

C. Deviations

1. Any deviation from the above requirements shall be made only with the written approval of the ENGINEER.

3.7 CLEANUP

A. Upon completion of the work, the CONTRACTOR shall remove from the jobsite all rubbish, unused materials, concrete forms and similar material.

B. At all times during construction, the CONTRACTOR shall maintain the site, partially finished structures, material stockpiles and other like areas in a reasonable state of order and cleanliness.

C. In the event the CONTRACTOR fails to perform this work, it may be performed by the OWNER at the expense of the CONTRACTOR.

3.8 SURFACE RESTORATION

A. General

1. The CONTRACTOR shall assume full responsibility for the consequences of excavation and street cuts and shall comply with all requirements of street-cut or right-of-way permits.
2. The replacement of all excavated base course, permanent paving and damaged curb and gutter shall be done in accordance with the Specifications and requirements contained in the permits and applicable provisions of these specifications.
3. All damaged driveways shall be replaced in like kind by the CONTRACTOR to an equal to, or better than, condition satisfactory to the OWNER thereof.
4. All cuts necessary for the replacement of damaged pavement or curbs and gutters shall be done with a concrete saw.
5. All drainage and ditch facilities shall be maintained in operating condition at all times during construction.

B. Unsurfaced Areas

1. The general grade and condition of all unsurfaced areas shall be restored as nearly as practicable to the grade and condition immediately prior to construction or as shown on the Plans.
2. Topsoil shall be removed, saved and replaced in cultivated and agricultural areas, and any excess earth shall be removed from the right-of-way at no addition expense to the OWNER.
3. All grassed areas shall be re-sodded or seeded, and the CONTRACTOR shall be responsible for caring for such until its growth is established.

C. Surfaced Areas

1. The roadway surface cuts shall be saw cut vertical and in a straight line.
2. All roadway surfacing between the surface cuts shall be removed and replaced with base course material and/or hot-mix bituminous or concrete surfacing. If the surface cut is within two feet of the curb and gutter, the existing asphalt from the surface cut to the pan line shall be removed and replaced.
3. In the event that the trench must be paved before hot-mix bituminous material can be acquired, the CONTRACTOR, at the discretion of the ENGINEER, shall install and maintain temporary cold-mix bituminous paving.
4. When hot-mix bituminous material becomes available, the CONTRACTOR shall remove the temporary cold-mix material, and re-compact the base course material and install the permanent hot-mix bituminous surfacing.

END OF SECTION

SECTION 31 23 19
DEWATERING

PART 1 GENERAL

1.1 WORK INCLUDED

A. Furnish all labor, tools, and equipment and perform all work and services necessary for dewatering.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 GROUNDWATER

A. Regardless whether or not borings and test pits have been taken, when ground water is encountered in the construction or excavation, the CONTRACTOR shall provide for dewatering as required to provide for stability and firmness of the foundation subgrade.

B. It is up to the CONTRACTOR to determine and satisfy for himself the amount, and extent, of any groundwater that may affect his operations, site safety and construction activities.

C. The water table shall be lowered prior to excavation to an elevation sufficiently below the proposed foundations to permit all construction operations to be performed dry.

D. Dewatering shall be accomplished in a manner that will preclude loss of fine material from the foundation soil.

E. The lowered water level shall be maintained until such time as the work is sufficiently advanced to secure damage from wetting or buoyancy.

F. In areas where structural backfill or compacted embankment is required, the excavation shall be free of water prior to start of backfill.

G. Any channels, flumes, drains, sumps, wells, walkway systems and other temporary diversion and protective works necessary for dewatering shall be constructed and maintained by the CONTRACTOR. After having served their purpose, all temporary drainage diversion structures, sumps wells and channels

shall be removed, leveled or filled to the final grades shown on the Drawings and in a manner approved by the ENGINEER.

3.2 SURFACE WATER

A. Construct, grade and maintain temporary channels, swales or ditches to divert surface water around the open excavation to prevent excavation slope degradation and excavation flooding and siltation. This is particularly important on water storage tank projects.

3.2 DISCHARGE PERMITS:

A. Apply for and secure any discharge permits with the appropriate agencies.

B. Comply with the permit requirements.

END OF SECTION

SECTION 31 23 23
CONTROLLED LOW STRENGTH MATERIAL (CLSM)
(FLOW FILL) UTILITY TRENCH BACKFILL

PART 1 GENERAL

1.1 GENERAL

A. Furnish and place controlled low strength material (CLSM) backfill bedding where shown in the Drawings.

B. The pipeline trench shall be excavated to the proper lines, grades and dimensions and CLSM backfill placed under, along the sides and on top of the pipe.

C. Unless otherwise shown in the Drawings, a minimum of six inches of CLSM backfill shall be placed over the crown of the pipe.

1.2 QUALITY STANDARDS

A. AMERICAN SOCIETY FOR TESTING AND MATERIALS (ASTM)

1. ASTM C 33, Concrete Aggregates
2. ASTM C 94, Specification for Ready-Mixed Concrete
3. ASTM C 143, Test Method for Slump of Hydraulic Cement Concrete
4. ASTM C 150, Portland Cement
5. ASTM C 494, Chemical Admixtures for Concrete
6. ASTM C 618, Fly Ash in Portland Cement Concrete
7. ASTM D 4832, Standard Test Method for Preparation and Testing of Soil-Cement Slurry Test Cylinders
8. ASTM PS 28, Provisional Standard Test Method for Flow Consistency of Controlled Low Strength Material
9. ASTM PS 29, Provisional Standard Test Method for Unit Weight, Yield and Air Content (Gravimetric) of Controlled Low Strength Material
10. ASTM PS 30, Provisional Standard Practice for Sampling Freshly Mixed Controlled Low Strength Material
11. ASTM PS 31, Provisional Standard Test Method for Ball Drop on Controlled Low Strength Material to Determine Suitability for Load Application

1.3 SUBMITTALS

A. A minimum of four weeks prior to starting CLSM work, CLSM shall be submitted for review and approval.

B. No changes shall be made in the amounts or sources of the approved mix ingredients without the approval of the ENGINEER.

C. Product inspection and field-testing of the approved mix may be made by, or on-behalf of, the OWNER.

PART 2 PRODUCTS

2.1 GENERAL

A. The CLSM bedding shall consist of a mixture of sand, coarse aggregate, cement and water. Fly ash and approved admixtures may be used to obtain the required properties of the mix. The mix shall have good workability and flowability with self-compacting and self-leveling characteristics.

B. The CLSM shall have minimum cement content of 50 pounds per cubic yard. The water-cementiuous materials ratio of the mix shall not exceed 3.5:1

2.2 CEMENT

A. All cement used shall be Type II Portland cement which shall conform to the requirements of ASTM C 150.

2.3 FLY ASH

A. Fly ash may be either Class C or Class F.

B. The fly ash shall conform to ASTM C 618.

2.4 AGGREGATES

A. Fine Aggregate

1. All fine aggregate shall conform to the grading and quality requirements of ASTM C 33.

B. Coarse Aggregate

1. Coarse aggregate shall conform to the grading and quality requirements of ASTM C 33 for size No. 476, No. 57 or No. 67.

2.5 WATER

A. The batch mixing water and mixer washout water shall conform to the requirements of ASTM C 94.

2.6 ADMIXTURES

A. Chemical admixtures that do not contain calcium chloride and conform to ASTM C 494 for concrete may be used in the CLSM mix.

B. All chemical admixtures shall be compatible with the cement and all other admixtures in the batch.

2.7 CLSM PROPORTIONS

A. Strength

1. CLSM shall have a 28-day compressive strength of 100 psI when molded and cured as in conformance with ASTM D 4832.

B. Air-Entrainment

1. All CLSM shall be air entrained to a total air content of approximately 5%.

C. Slump

1. The minimum slump shall be six inches and the maximum slump shall be eight inches as when tested in accordance with ASTM PS 28.

D. Aggregate

1. Fine aggregate shall be between 50% and 60% by volume of the total aggregates in the CLSM mix.

E. Consistency

1. The consistency of the CLSM slurry shall be such that the material flows easily into all openings between the pipe and the lower portion of the trench.
2. When trenches are on a steep slope, a stiffer mix of slurry may be required to prevent CSLM from flowing down the trench.

3. When a stiffer mix is used, vibration shall be performed to ensure that the CLSM slurry completely fills all spaces between the pipe and the lower portion of the trench.

PART 3 EXECUTION

3.1 PLACEMENT

A. Pipe shall be placed on two sandbags and leveled to the proper grade. Precast or other types of rigid pads that constitute a point load are unacceptable.

B. CLSM shall be placed under the pipe from one side so that it flows under the pipe until it appears on the other side. CLSM shall then be added to both sides of the pipe until it completely fills the space between the pipe and the sides of the trench, to the depths shown in the Drawings. Rodding, mechanical vibration and compaction of CLSM shall be performed to assist in consolidating the CLSM.

C. CLSM shall be placed as closely behind pipe laying operations as possible.

D. When required to prevent uplift, the CLSM shall be placed in two stages as required, allowing sufficient time for the initial set of the first stage before the remainder is placed. CLSM shall be deposited as nearly as practical in its final position and in no way disturb the pipe trench or cause foreign material to become mixed with the CLSM.

E. Soil backfill shall not be placed until the CLSM has reached the initial set. If backfill is not to be placed over the CLSM within 8 hours, a 6-inch cover of moist earth shall be placed over the CLSM surface.

F. If the air temperature is 50° F or less, the moist earth cover should be at least 18-inches thick. CLSM shall not be placed unless the air temperature is 45° F or more and the temperature is rising.

G. CLSM shall not be placed, if, in the judgment of the ENGINEER, weather conditions are unsuitable.

H. CLSM shall not be placed when the trench bottom or walls are frozen or contain frozen materials.

END OF SECTION

SECTION 31 25 00
EROSION AND SEDIMENTATION CONTROL

PART 1 GENERAL

1.1 WORK INCLUDED

A. The CONTRACTOR shall furnish all labor, tools, equipment, materials, and design for the control of erosion and sedimentation during construction.

B. The work includes maintenance of the measures during the contract period and removal of temporary measures in coordination with installation of permanent erosion control measures.

C. The work includes the application for and conformance to permits as required by local, state and federal agencies.

D. It is the intent that the work described herein conforms to referenced specifications. In the event a conflict occurs, the provisions of the referenced specifications shall control.

E. The CONTRACTOR is responsible for applying for The Colorado Water Quality Control Division (CWQCD) permit which regulates discharges of water from construction sites. The discharge permit is a part of a program delegated to Colorado by the Environmental Protection Agency, under the Federal Clean Water Act Section 402 National Pollutant Discharge Elimination System (NPDES). This permit is required for this project.

1.2 REFERENCED STANDARDS

A, MILE HIGH FLOOD DISTRICT

1. Urban Storm Drainage Criteria Vol. 3 – Best Management Practices

B. Colorado Department of Transportation (CDOT)

1. Erosion Control Manual

C. Arapahoe County, Colorado

1. Storm Drainage Design and Technical Criteria – Chap. 13 – Erosion and Sedimentation Control from Construction Activities

1.3 SUBMITTALS

A. Copies of permit applications

B. Fill slope treatments

C. Mulch

D. Silt fence

E. Gravel gradation for construction entrances (tracking mat)

F. Storm drain inlet protection

1.4 PERMITS

A. Colorado Department of Public Health and Environment

1. Stormwater Discharges Associated with Construction Activity
2. Groundwater Discharges Associates with Construction Activity Permit

PART 2 PRODUCTS

2.1 GENERAL

A. Products shall conform to the requirements of the referenced and other applicable standards.

PART 3 EXECUTION

3.1 GENERAL

A. Permits

1. The CONTRACTOR shall submit applications for permits prior to commencing work. Copies of applications shall be sent to the ENGINEER and OWNER.

2. Copies of approved permits shall be provided to the ENGINEER and the OWNER and the original kept on site.

B. Construction

1. Construction erosion and sedimentation control measures shall be installed prior to commencing construction.

2. The CONTRACTOR shall plan and execute construction activities to control surface drainage from earthwork, stockpile areas and from borrow and waste disposal areas to prevent and control erosion and sedimentation, including:

    a. Minimize the amount of bare soil exposed at any one time
    b. Protect disturbed areas as soon as possible
    c. Limit area of disturbance
    d. Surface roughening

3.2 MAINTENANCE OF EROSION AND SEDIMENTATION CONTROL MEASURES

A. INSPECTION

1. The CONTRACTOR shall periodically review all erosion and sedimentation control measures for evidence or erosion and sedimentation.
2. The CONTRACTOR shall promptly apply corrective measures to repair existing erosion, clean-up existing sediment and take measures to prevent continued erosion and sedimentation.
3. Specific measures shall conform to best management practices of the applicable regulatory agency(s).

B. Maintenance

1. The CONTRACTOR shall maintain and modify erosion and sedimentation control measures as required including temporary re-vegetation of stockpiles and soil areas subject to erosion.

3.3 REMOVAL OF TEMPORARY EROSION CONTROL MEASURES

A. All temporary erosion and sedimentation control measures shall be removed and legally disposed of within 30 days after final site stabilization is achieved, after the erosion and sedimentation control measures are no longer require or as directed by the ENGINEER or OWNER.

B. The removal of erosion and sedimentation control measures shall be performed in a manner to prevent damage to completed work and re-vegetated areas. The CONTRACTOR shall be required to repair and stabilize areas that are damaged to prevent erosion and sedimentation from occurring.

C. The ENGINEER or the OWNER may direct the CONTRACTOR to leave all or a portion of the temporary erosion and sedimentation control measures upon completion of the work. After review and acceptance of the work, the OWNER shall accept responsibility for the subject measures.

3.4 CONSTRUCTION DEWATERING

A. See SECTION 31 23 19 – DEWATERING

B. All dewatering flows that carry sediment shall not be directly introduced to a flowing body of water, storm sewer or irrigation ditch.

C. Dewatering flows shall be routed to a sediment basin or traps prior to discharge to the body of water. The CONTRACTOR shall also protect properties and rights-of-ways from sedimentation and erosion due to dewatering flows.

3.5 COLORADO WATER QUALITY ACT

A. The CONTRACTOR is responsible for:

1. Preparation of a Storm Water Management Plan (SWMP) for the project
2. Permit application
3. Receipt of permit from the Colorado Water Quality Control Division
4. Conformation to provisions of the permit and SWMP requirements
5. Annual fee
6. Performance of a site inspection at least every 14 days and after significant precipitation events.

END OF SECTION

SECTION 31 37 00
RIPRAP

PART 1 GENERAL

1.1 WORK INCLUDED

A. Furnish all labor, tools, materials and equipment to construct grouted and ungrouted riprap for soil stabilization, channel slopes and drop structures placed in a single layer for erosion protection as shown in the Drawings and specified herein. Although such work is not specifically indicated, furnish and install all supplementary or miscellaneous items, appurtenances and devices incidental to or necessary for a complete installation of grouted and ungrouted riprap.

1.2 QUALITY STANDARDS

A. Urban Storm Drainage Criteria Manual (USDCM)

B. American Society For Testing and Materials (ASTM)

1. ASTM C 33 - Concrete Aggregates
2. ASTM C 94 - Ready Mixed Concrete
3. ASTM C 143 - Test Method for Slump of Hydraulic Cement Concrete
4. ASTM C 150 - Portland Cement
5. ASTM C 260 - Air-entraining Admixtures for Concrete
6. ASTM C 309 - Specification for Liquid Membrane-Forming Compounds for Curing Concrete
7. ASTM C 494 - Chemical Admixtures for Concrete
8. ASTM C 535 - Test Method for Resistance to Degradation of Large-Size Coarse Aggregate by Abrasion and Impact in the Los Angeles Machine
9. ASTM C 618 - Fly Ash in Portland Cement Concrete

C. American Concrete Institute

1. ACI 301 - Structural Concrete for Buildings
2. ACI 304 - Guide for Measuring, Mixing, Transporting and Placing Concrete
3. ACI 305 - Hot Weather Concreting
4. ACI 306 - Cold Weather Concreting
5. ACI 308 - Standard Practice for Curing Concrete
6. ACI 309 - Standard Practice for Consolidating Concrete

1.3 QUALITY ASSURANCE

A. All work shall be performed in accordance with the standards of the Urban Drainage and Flood Control District

B. Maintain a copy of the District's Standards at the site.

1.4 SUBMITTALS

A. Product Data

1. Admixtures

2. Curing Compounds
3. Ready Mixed Concrete Mix Designs

B. Rock

1. The CONTRACTOR shall furnish laboratory test results indicating that the material meets a 50% loss for abrasion resistance as measured by ASTM C 535 and compressive strength of 2500 psi, minimum, as determined by AASHTO T 24.

PART 2 PRODUCTS

2.1 RIPRAP

A. The rock types listed below are labeled MG, HG, and VHG to indicate their specific designation for grouted riprap. These correspond to the riprap specifications in the USDCM for Types M, H, and VH. The "G" suffix indicates that the gradation eliminates smaller rock sizes to permit ease of grout penetration.

B. Control of gradation shall be by visual inspection.

C. Reference samples, one-ton minimum, shall be delivered to the construction site meeting the gradation specified. These samples will be used as a reference for judging the gradation of the rock supplied.

D. The rock face shall fractured, rough and angular in nature, hard, dense, durable and resistant to weathering.

E. River rounded, smooth faced, boulders and cobbles and removed concrete are unacceptable for use in grouted riprap.

F. The stone shall have a specific gravity of at least 2.5.

G. Each piece shall have its greatest dimension not greater than two times its least dimension.

CLASSIFICATION AND GRADATION OF ROCK FOR GROUTED RIPRAP

Riprap Designation	% Smaller Than Given Size By Weight	Intermediate Rock Dimension (Inches)[1]
Type MG	70-100	21
	50-70	18
	0-5	12
Type HG	100	30
	50-70	24
	0-5	18
Type VHG	100	42
	50-70	33
	0-5	24

(1) Equivalent spherical diameter

2.3 CEMENT

A. Cement type shall be Portland Cement, ASTM C 150, Type II. One type and brand of cement shall be used throughout the project.

2.4 AGGREGATE

A. General

1. The aggregate shall be comprised of 70% fine aggregate and 30% coarse aggregate. Gradations shall be as follows.

a. Fine aggregate shall consist of hard, durable particles conforming to the Standard Specifications for Concrete Aggregates, ASTM C 33.
b. Coarse aggregate shall conform to the provisions of the Standard Specifications for Concrete Aggregates, ASTM C 33, Size 8 (3/8 inch).

2.5 ADMIXTURES

A. Air entrainment:

1. An air-entraining agent shall be used which conforms to ASTM C 260.
2. The amount of air entraining agent used in the mix shall be such as will effect the entrainment of 7 1/2% plus or minus 1 1/2% in the concrete as discharged from the mixer.

B. Water Reducing, Set-Controlling Admixture:

1. The CONTRACTOR shall use a water reducing, set controlling, admixture in the concrete mix.
2. The admixture shall conform to ASTM C 494, specifically Types A, B, C, D and E.

C. Fly Ash:

1. Fly ash, conforming to ASTM C 618, Class F.
2. A maximum of 20% fly ash to total pozzolan content, Portland Cement + fly ash, will be permitted.

D. Water:

1. Water shall be clean and free from injurious amounts of oils, acids, alkalis, salts, organic materials, or other substances that may be deleterious to concrete.
2. Unless otherwise permitted or specified, the concrete shall be proportioned and produced to have a slump of seven inches, plus or minus two inches. The slump shall be determined by ASTM C 143.

E. Fibermesh:

1. One and one-half pounds of Fibermesh shall be used per cubic yard of concrete.

2.6 BATCHING:

A. Measuring and batching of materials shall be done at a batching plant.

1. Portland Cement

a. Either sacked or bulk cement may be used.
b. No fraction of a sack of cement shall be used in a batch of concrete unless the cement is weighed.
c. Bulk cement shall be weighed on scales separate and distinct from the aggregate hopper or hoppers.
d. Batching shall be such that the accuracy of batching shall be plus or minus one percent of the required weight.

2. Water

a. Unless water is to be weighed, the water-measuring equipment shall include an auxiliary tank from which the measuring tank shall be filled.
b. In lieu of the volume method, the CONTRACTOR will be permitted to use a water-metering device.

3. Aggregates

a. Aggregates shall be handled from stockpiles or other sources to the batching plant in such a manner as to secure a uniform grading of the material.
b. Aggregates that have become segregated, or mixed with earth or foreign material, shall not be used.
c. Batching shall be so conducted as to result in the weights of material required for each type aggregate within a tolerance of two percent.

2.7 MIXING

A. Concrete may be mixed at the site of the work, in a central-mix plant, or in truck mixers.

B. Mixing time shall be measured from the time water is added to the mix, or cement contracts the aggregate.

C. All concrete shall be homogeneous and thoroughly mixed, and there shall be no lumps or evidence of undispersed cement.

D. Mixers and agitators which have an accumulation of hard concrete or mortar shall not be used.

E. The temperature of mixed concrete, immediately before placing shall not be less than 50° F nor more than 90° F. Aggregates and water shall be heated or cooled as necessary to produce concrete within these temperature limits. Neither aggregates nor mixing water shall be heated to exceed 150° F.

F. Ready-mixed concrete shall be mixed and transported in accordance with ASTM C 94.

G. The time elapsing from the time water is added to the mix (or the cement comes in contact with aggregate) until the concrete is deposited in place at the site of the work shall not exceed 45

minutes when the concrete is hauled in non-agitating trucks, nor more than 90 minutes when hauled in truck mixers or truck agitators.

H. The batch shall be so charged into the drum that a portion of the mixing water shall enter in advance of the cement and aggregates. The flow of water shall be uniform and all water shall be in the drum by the end of the first 1/4 of the specified mixing time.

I. Cement shall be charged into the mixer by means that will not result in loss of cement due to the effect of wind, or in accumulation of cement on surfaces of hoppers or in other conditions which reduce or vary the required quantity of cement in the concrete mixture.

2.8 TRANSPORTING MIXED CONCRETE - MIXED CONCRETE OR TRUCK MIXERS

A. Transporting of mixed concrete shall conform to ACI 305.

B. Truck agitators shall be loaded not to exceed the manufacturer's guaranteed capacity. They shall maintain the mixed concrete in a thoroughly mixed and uniform mass during hauling.

C. No additional mixing water shall be incorporated into the concrete during hauling or after arrival at the delivery point, unless ordered by the ENGINEER. If additional water is to be incorporated into the concrete, the drum shall be revolved not less than 30 revolutions at mixing speed after the water is added and before discharge is commenced.

D. The CONTRACTOR shall furnish a water-measuring device in good working condition, mounted on each transit mix truck, for measuring the water added to the mix on the site by the ENGINEER.

E. Each load of ready mixed concrete delivered at the job site, except loads to be used for pavement, shall be accompanied by the ticket showing volume of concrete, the weight of cement in pounds and the total weight of all ingredients in pounds. The ticket shall also show the time of day at which the materials were batched and the reading of the revolution counter at the time the truck mixer is charged.

F. Each load of ready mixed concrete used for paving shall be accompanied by a ticket, which shall be delivered to the ENGINEER, stamped with the date and time when the truck mixer is charged.

2.8 COMPRESSIVE STRENGTH

A. Concrete compressive strength requirements consist of a minimum strength which must be obtained before various loads of stresses are applied to the concrete and, for concrete designated by strength, a minimum strength at the age of 28 days. Unless otherwise shown on the Drawings the concrete 28-day compressive strength shall be a minimum of 3,000 psi.

B. The mix shall be designed for strengths at least 15 percent in excess of this minimum. The ratio of water to the sum of concrete + pozzolan shall not exceed 0.45 by weight.

PART 3 - EXECUTION

3.1 ROCK

A. Rock shall be placed in a single layer with joints a minimum of two inches and a maximum of six inches apart and in a manner to minimize straight construction joints.

B. The rock shall be placed to give the appearance of plating the slopes and channel invert.

C. After placement all exposed rock shall be cleaned with a stiff, wet, broom.

3.2 GROUT

A. Prior to placing grout the CONTRACTOR shall remove all debris and thoroughly dampen the surfaces which will be in contact with the concrete to be placed.

B. Placement shall conform to ACI 301, Chapter 8 "Placing", ACI 304R, "Guide of Measuring, Mixing, Transporting and Placing Concrete," ACI 306 "Recommended Practice for Cold Weather Concreting", ACI 305 "Recommended Practice for Hot Weather Concreting" and ACI 309, "Standard Practice for Consolidation of Concrete".

C. No grout shall be placed until preparation of surfaces involved in the placing have been approved by the ENGINEER.

D. No grout shall be placed in water except with the written permission of the ENGINEER.

E. Immediately before placing concrete, all surfaces upon or against which the concrete is to be placed shall be free from standing water, mud, debris or loose materials.

F. All grout shall be placed by means of a low pressure, 10 psi or less, grout pump using a two-inch diameter nozzle.

G. Full depth penetration of the grout into the layer of riprap is required. A high cycle, two-inch diameter of smaller, vibrator shall be used to consolidate the grout.

H. Joints shall be filled with grout from bottom to top and the surfaces swept with a stiff broom.

I. The top six inches of the rock layer, or the top 1/4 of the rock layer, whichever is greater, shall be left exposed, unless otherwise shown in the Drawings.

J. After grout placement and prior to brooming the joint surface, all rock shall be cleaned with a wet broom to remove grout from any exposed surface.

3.3 CURING

A. General

1. Beginning immediately after placement, the grout shall be protected from premature drying, excessively hot or cold temperatures, and mechanical injury, and shall be maintained with minimal moisture loss at a relatively constant temperature for the period necessary for hydration of the cement and hardening of the grout in accordance with ACI 308, "Standard Practice for Curing Concrete". The materials and method of curing shall be subject to review and acceptance by the ENGINEER.

2. The grout shall be cured by an application(s) of a curing compound conforming to "Specifications for Liquid Membrane Forming Compounds for Curing Concrete" (ASTM C 309). The compound shall be applied in accordance with the recommendations of the manufacturer immediately after any water sheen which may develop after finishing has dis-

appeared from the grout surface. It shall not be used on any surface against which additional grout or other material is to be bonded unless it is proven that the curing compound will not prevent bond, or unless positive measures are taken to remove it completely from areas to receive bonded applications.

3. Curing shall be continued for at least seven days in the case of all grout except high-early strength concrete for which the period shall be at least three days. Alternatively, if tests are made of cylinders kept adjacent to the structure and cured by the same methods, moisture retention measures may be terminated when the average compressive strength has reached 70% of the specified concrete strength.

B. Cold Weather.

1. When the mean daily outdoor temperature is less than 40° F, the temperature of the grout shall be maintained between 50° and 70° F for the required curing period.
2. When necessary, arrangements for heating, covering, insulating, or housing the grout shall be made in advance of placement and shall be adequate to maintain the required temperature without injury due to concentration of heat.
3. Combustion heaters shall not be used during the first 24 hours unless precautions are taken to prevent exposure of the grout to exhaust gases which contain carbon dioxide.

C. Hot Weather

1. When necessary, provision for windbreaks, shading, fog spraying, sprinkling, ponding, or wet covering with a light colored material shall be made in advance of placement, and such protective measures shall be taken as quickly as grout hardening and finishing operations will allow.
2. If the rate of evaporation approaches 0.2 lb/ft^2/hr, as estimated by ACI 305, precautions against plastic shrinkage cracking are necessary.
3. The CONTRACTOR is required to have a recording thermometer, hygrometer and wind gage on site. In arid climates precautions against plastic shrinkage cracks may be required in conditions other than what is normally considered hot weather conditions.

D. Rate of Temperature Change

1. Changes in temperature of the air immediately adjacent to the grout during and immediately following the curing period shall be kept as uniform as possible and shall not exceed 5° F in any one hour or 50° F in any 24 hour period.

E. Protection From Mechanical Injury.

1. During the curing period, the grout shall be protected from damaging mechanical disturbances, such as load stresses, heavy shock, and excessive vibration.
2. All finished grout surfaces shall be protected from damage by construction equipment, materials, or methods, by application of curing procedures, and by rain or running water.

F. Frozen Ground Surface

1. The grout shall not be placed when the soil temperature is less than 40° F.

3.4 WEEP HOLES

A. Weep holes constructed of one and one-half or two inch schedule 80 PVC pipe shall be installed as shown in the Drawings.

B. The PVC pipe shall be cut flush with the surrounding grout. To alleviate plugging, the PVC pipe should be pushed into the bedding, or if bedding is not required, the PVC pipe shall be wrapped in a coarse geotextile fabric "bag" filled with one and one-half inch coarse rock under the rock layer. Approximately one cubic foot of wrapped rock is required.

END OF SECTION

SECTION 31 38 00
WALL DRAINAGE PANELS

PART 1 GENERAL

1.1 WORK INCLUDED

A. Furnish all labor, tools, and equipment and perform all work necessary for, or incidental to, the supply and installation of prefabricated drainage panels as shown in the Drawings, specified herein and as recommended by the manufacturer of the panel. This Work includes the attachment of the panel to the perforated perimeter pipe drainage system. The Work shall be coordinated with the work of all other trades and activities on the project.

B. Although such work is not specifically shown or specified, furnish and install all supplementary and miscellaneous items, appurtenances and devices incidental to or necessary for a complete and secure installation.

1.2 QUALITY STANDARDS

A. American Society for Testing and Materials (ASTM):

1. D 1621 - Test Method for Compressive Properties of Rigid Cellular Plastics.
2. D 1777 - Method for Measuring Thickness of Textile Materials.
3. D 3776 - Test Methods of Mass per Unit Area (Weight) of Woven Fabric.
4. D 4491 - Test Methods for Water Permeability of Geotextiles by Permittivity.
5. D 4632 - Test Method for Grab Breaking Load and Elongation of Geotextiles.
6. D 4716 - Test Method for Constant Head Hydraulic Transmissivity (In-Plane Flow) of Geotextiles and Geotextile Related Products.
7. D 4751 - Test Method for Determining the Apparent Opening Size of a Geotextile.

1.3 DELIVERY, STORAGE AND HANDLING

A. The material shall be delivered in the original packaging bearing the manufacturers name. The fabric shall not be exposed to direct sunlight for more than one week during its storage and installation.

1.4 JOB CONDITIONS

A. When the fabric is used in conjunction with a waterproofing membrane, the drainage panels shall be compatible with the waterproofing membrane and installed by methods recommended by the membrane manufacturer.

1.5 SUBMITTALS

A. Submittals shall include:

1. Drainage panel sample.
2. Manufacturer's Specification sheets.
3. Method of attachment to the concrete wall.

B. Shop drawings are required and shall conform to the requirements of SECTION 01 33 00.

PART 2 PRODUCTS

2.1 COMPRESSIVE STRENGTH

A. The core shall have a compressive strength of 15,000 psf as determined by ASTM D 1621

2.2 FLOW RATE

A. The flow rate of the core shall be 17 gpm/ft^2 as determined by ASTM D 4716.

2.3 THICKNESS

A. The drainage panel shall be 0.40 inches thick.

2.4 MANUFACTURER

A. Products manufactured by Carlisle Coatings & Waterproofing Inc., MiraDRAIN 6000 or MiraDRAIN 6200, Wylie, Texas 75098.

B. AKZO Nobel, Enkadrain 9615, Enka, North Carolina 28728.

PART 3 EXECUTION

3.1 GENERAL

A. Prior to installing the MiraDRAIN, a pre-installation meeting shall be held to include the CONTRACTOR, representative of the panel manufacturer, earth earthwork sub-contractor, and ENGINEER. The meeting agenda will include discussions regarding panel handling, attachment, installation and earth backfill.

3.2 INSTALLATION

A. Install drainage panels to the limits shown in the Drawings and in accordance with manufacturer's written directions, a copy of which shall be available on site. Install the panels horizontally. Beginning at the bottom of the wall, attach the first panel with the filter fabric side out, away from the wall towards the soil. Attach the panels using one of the temporary panel attachment systems compatible with the substrate. Tape and compatible adhesives recommended

by the manufacturer are acceptable. Nailing to the concrete wall is unacceptable.

B. Corners shall be made by bending the panel to the required form.

C. Where panel terminations are to be made, protect all panel edges from soil intrusion with the filter fabric by tucking the fabric behind the core.

D. To attach the panel system to the underdrain pipeline system, peel back the bottom fabric flap from the core. Place the pipe next to the dimpled core and wrap the fabric over the top and around the pipe securely tucking the fabric under the pipe. Where fabric is used in the underdrain trench lap the panel fabric to the outside vertical face of the trench fabric.

E. Backfill shall be placed within two weeks of placing the drainage panel. Backfill shall be placed to a minimum of six inches above the top edge of the panel.

END OF SECTION

SECTION 32 11 23
WST AGGREGATE BASE COURSE

PART 1 GENERAL

1.1 WORK INCLUDED

A. Work includes the preparation of the aggregate base course foundation; the production, stockpiling, hauling, placing and compacting aggregate base course.

B. Re-cycled concrete for aggregate base course is unacceptable.

1.2 QUALITY STANDARDS

A American Association of State Highway and Transportation Officials (AASHTO)

1. AASHTO M 147 - Materials for Aggregates and Soil-subbase, Base and Surface Courses
2. AASHTO T 89 - Determining the Liquid Limit of Soils
3. AASHTO T 90 - Determining the Plastic Limit and Plasticity Index of Soils

B. ASTM (American Society for Testing and Materials) International (ASTM)

1. ASTM D 698 - Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft^3)
2. ASTM D1557 - Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft^3).
3. ASTM C 136 - Method for Sieve or Screen Analysis of Fine and Coarse Aggregates
4. ASTM C 535 - Test Method to Degradation of Large-Size Coarse Aggregate by Abrasion and Impact in the Los Angeles Machine.
5. ASTM C 131 - Test Method to Degradation of Small-Size Coarse Aggregate by Abrasion and Impact in the Los Angeles Machine.
6. ASTM C 142 - Test Method for Clay Lumps and Friable Particles in Aggregates
7. ASTM D 75 - Practices for Sampling Aggregates

1.3 SUBMITTALS

A. Submit laboratory tests to the ENGINEER detailing conformance with the relevant specifications.

PART 2 MATERIALS

2.1 AGGREGATES

A. Aggregates for bases shall be crushed stone, crushed slag, crushed gravel or natural gravel that conforms to the quality requirements of AASHTO M 147 except that the requirements for the ratio for the minus No. 200 sieve fraction to the to the minus No. 40 sieve fraction shall not apply.

B. The requirements for the Los Angeles wear test shall not apply to Class 1, 2 and 3.

C. Aggregates for bases shall meet the grading requirements as called out in the Drawings.

D. The liquid limit shall be as shown in the table and the plasticity index shall be $\leq$ six.

2.2 GRADATIONS

Sieve Designation	Percentage by Weight Passing Square Mesh Sieves						
	LL < 35			LL < 30			
	Class 1	Class 2	Class 3	Class 4	Class 5	Class 6	Class 7
4 inch	---	100	---	---	---	---	---
3 inch	---	95 - 100	---	---	---	---	---

No. 200	3 - 15	3 - 15	20 max.	3 - 12	3 - 15	3 - 12	5 - 15

TABLE 1

Note: Class 3 materials shall consist of bank or pit run material.

2.2 EQUIPMENT

A. Equipment shall be capable of legally performing the work as described in this Specification. Equipment that is inadequate to obtain the results specified shall be replaced or supplemented as required to meet the requirements of this Specification.

B. Any equipment that is used in an improper manner may be cause for rejection of the work if in the opinion of the ENGINEER the work fails to meet the requirements of this specification.

C. Equipment used for compaction shall be the rolling type, vibratory type, or combination of both types, and shall be of sufficient capacity to meet the compaction requirements herein.

PART 3 EXECUTION

3.1 PREPARATION OF FOUNDATION

A. The foundation shall be considered to be the finished earth subgrade, subbase course, or base course, as the case may be, upon which any subbase, base or surface course is to be constructed.

B. Preparation of foundation for construction of a subbase, base, or surface course shall consist of the work necessary to restore, correct, strengthen or prepare the foundation to a condition suitable for applying and supporting the intended course.

C. For aggregate base course roads and parking areas, the top six-inches of topsoil shall be stripped within the area to be aggregate surfaced. Following stripping of the topsoil, the upper 12 inches of the subgrade shall be scarified and compacted to a minimum of 95 percent of ASTM D 698. On-site material may be used as accepted by the ENGINEER, for compacted fill for the aggregate base course. Fill shall be placed with two percent of optimum moisture content and compacted to a minimum of 95 percent ASTM D 698.

D. Aggregate base course used as a foundation for pavements shall be placed on the subgrade within two percent of optimum moisture and compacted to a minimum of 100 percent ASTM D1557. The top six inches of topsoil shall be stripped within the area to be aggregate surfaced. Following stripping of the topsoil, the upper 12 inches of the subgrade shall be scarified and compacted to a minimum of 95 percent of ASTM D 698. On-site material may be used, as accepted by the ENGINEER, for compacted fill for the aggregate base course. Fill shall be placed with two percent of optimum moisture content and compacted to a minimum of 95 percent ASTM D 698. Deviations in aggregate base course under pavements of more than 1/4 inch in 10 feet, measured with a 10-foot straight edge, shall be corrected prior to pavement construction

E. The foundation shall be prepared and constructed such that it will have a uniform density throughout. It shall be brought to the required alignment and cross section with equipment and methods adapted for the purpose. Upon completion of the shaping and compacting operations, the foundation shall be smooth, at the required density, and at the proper elevation and contour to receive the aggregate base course.

F. Unless otherwise provided, all holes, ruts and other depressions in the foundation shall be filled with materials similar to those existing in the foundation. High places shall be excavated and removed to the required lines, grade and section.

G. Areas of yielding or unstable material shall be excavated and backfilled with stabilization rock as determined by the ENGINEER. Base course material shall not be placed on

a foundation that is soft, spongy, or one that is covered by ice or snow. Base course shall not be placed on a dry or dusty foundation where the existing condition would cause rapid dissipation of moisture from the base course material and hinder or preclude its proper compaction. Dry foundations shall have water applied and reworked and compacted as necessary.

H. The ENGINEER shall direct the CONTRACTOR to make minor adjustments in the finish grade from that shown in the Drawings as may be necessary or desirable to maintain the characteristics of a stabilized foundation by minimizing the amount of cutting into or filling.

3.2 EARTH SUBGRADE

A. When the foundation is an earth subgrade it shall be prepared by removing all vegetation, excavating and removing materials, filling depressions, scarifying, shaping, smoothing and compacting to meet the required grade, section and density.

B. Stones over six inches in greatest dimension shall be removed.

3.3 PLACEMENT

A. The aggregate base course shall be constructed to the width and section shown in the Drawings. If the required compacted depth of base coarse exceeds six inches, the base shall be constructed in two or more layers of approximate equal thickness.

B. The maximum compacted thickness of any one layer shall not exceed six inches.

C. Each layer shall be constructed as far in advance of the succeeding layer as the ENGINEER may direct. The work shall, in general, proceed from the point on the project nearest the point of supply of the aggregate in order that the hauling equipment may travel over the previously placed material, and the hauling equipment shall be routed as uniformly as possible over all portions of the previously constructed courses or layers of the base course.

D. The material shall be deposited on the soil foundation, or previously placed layer in a manner to minimize segregation and to facilitate spreading to a uniform layer of the required section. In the event that blending of materials is necessary to provide required gradation and properties of the material, and is done in the roadway, the same shall be accomplished by mixing the aggregate and blending material by means of blade graders, discs, harrows or other equipment to effect a uniform distribution and gradation throughout the finished mixture. Excessive mixing and grading that will cause segregation between the coarse and fine materials is prohibited.

3.4 COMPACTION

A. After a layer or course has been placed and spread to the required thickness, width and contour, it shall be compacted. If the material is too dry to readily attain the required

density, it shall be uniformly moistened to the degree necessary during compaction operations for proper compaction.

B. Compaction of each layer shall continue until the required density of Section 3.1 is reached. The surface of each layer shall be maintained during compaction operations in such a manner that a uniform texture is produced and aggregates firmly keyed.

C. All areas where proper compaction is not obtainable due to segregation of materials, excess fines, or other deficiencies in the aggregate shall be reworked as necessary or the material removed and replaced with aggregates that will meet this specification.

D. The surface of each layer shall be kept true and smooth at all times.

3.5 MIXING

A. Unless otherwise specified, the CONTRACTOR shall mix the aggregate by any one of the three following methods.

1. Stationary Plant Method

a. Aggregate base course and water shall be mixed in an approved mixer.
b. After mixing the aggregate shall be transported to the project site while it contains the proper moisture content and shall be placed on the roadbed by means of an approved spreader.

2. Travel Plant Method

a. After the material for each layer has been placed through an aggregate spreader or windrow-sizing device, it shall be uniformly mixed by a traveling mixing plant.

3. Road Mix Method

a. After material for each layer has been placed, the materials shall be mixed while at optimum moisture content by motor graders or other approved equipment until the mixture is uniform throughout.

3.6 SHOULDER CONSTRUCTION

A. Shoulders shall be constructed with base course material to conform to the elevation and section shown in the Drawings.

B. No equipment shall be used which by its design or through its manner of operation that will damage the pavement or curbs.

C. Insofar as practicable, the base course material shall be placed directly on the shoulder area.

D. Materials that are deposited outside the shoulder area, if not contaminated, shall be recovered and placed within the required limits. The CONTRACTOR will not be compensated for materials not recovered as determined by the ENGINEER.

E. Materials shall not be deposited on the pavement or surfacing during placing unless specifically permitted by the ENGINEER.

F. The base course material as placed shall be spread and compacted to the required density in layers not exceeding six inches in compacted thickness. Any material inadvertently placed on the pavement shall be broomed from the pavement. The result shall not effect a change in the gradation of the shoulder material.

END OF SECTION

SECTION 32 31 13
CHAIN LINK FENCES AND GATES

PART 1 GENERAL

1.1 WORK INCLUDED

A. The CONTRACTOR shall furnish all labor, tools and equipment and work necessary for, or incidental to, the supply and construction of chain link fences and gates as shown in the Drawings and as specified herein.

1.2 QUALITY STANDARDS

A. Chain Link Fence Manufacturer's Institute (CLFMI) –

1. CLFMI - Product Manual

2. FS RR-R-191 - Fencing, Wire and Post Metal (and Gates, Chain Link Fence Fabric, and Accessories)

C. Colorado Department of Transportation (CDOT)

1. CDOT Standard M-607-2

D. American Society for Testing and Materials (ASTM)

1. ASTM A 90, Weight of Coating on Zinc-Coated (Galvanized) Iron or Steel Products
2. ASTM A 116, Zinc-Coated (Galvanized) Steel Woven Wire Fence Fabric
3. ASTM A 120, Pipe, Steel, Black and Hot-Dipped Zinc Coated (Galvanized) Welded and Seamless, for Ordinary Uses
4. ASTM A 121, Zinc-Coated (Galvanized) Steel Barbed Wire
5. ASTM A 123, Zinc (Hot dip Galvanized) Coatings on Iron and Steel Products
6. ASTM A 153, Zinc Coating (Hot-Dip) on Iron and Steel Hardware
7. ASTM A 370, Mechanical Testing of Steel Products
8. ASTM A 392, Zinc-Coated Steel Chain-Link Fence Fabric
9. ASTM A 428, Weight of Coating on Aluminum-Coated Iron or Steel Articles
10. ASTM A 491, Aluminum-Coated Steel Chain-Link Fence Fabric
11. ANSI/ASTM F 567, Installation of Chain-Link Fence
12. ASTM A 569, Steel, Carbon (0.15 Maximum Percent), Hot-Rolled Sheet and Strip Commercial Quality

13. ASTM A 585, Aluminum-Coated Steel Barbed Wire
14. ASTM A 824, Metallic-Coated Steel Marcelled Tension Wire for Use with Chain Link Fence
15. ASTM A 817, Metallic-Coated Steel Wire for Chain Link Fence Fabric
16. ASTM C 94, Ready-mixed Concrete
17. ASTM F 573, Residential Zinc-Coated Steel Chain-Link Fence Fabric
18. ASTM F 626, Fence Fittings
19. ASTM F 668, Poly (Vinyl Chloride) (PVC)-Coated Steel Chain-Link Fence Fabric
20. ASTM F 934, Standard Colors for Polymer Coated Chain Link Fence Materials
21. ASTM F 1183, Aluminum Alloy Chain Link Fence Fabric
22. ASTM F 1234, Protective Coatings on Steel Framework for Fences

1.3 SUBMITTALS

A. Include complete details of fence and gate construction, fence height, post spacing, dimensions and unit weights of framework and concrete foundation details.

B. CONTRACTOR shall remove the existing fence, approximately 300-feet long and provide to the OWNER.

PART 2 PRODUCTS

2.1 MATERIALS

A. Framing

1. Unless otherwise shown on the Drawings, the Contractor may elect to use either Type I or Type II framing. Where a PVC-coated chain-link fence is specified, the framing shall be color coated to match the fence fabric in accordance with ASTM F 1234.
2. Type I framing shall be ASTM A 120 Schedule 40 steel pipe with 1.8 ounces of zinc coating per square foot of surface area conforming to ASTM F 1083.
3. Type II framing shall be manufactured from steel conforming to ASTM A 569, cold formed, high frequency or induction welded and having a minimum yield strength of 50,000 psi. External surface triple coated with 1.0 ounce, plus or minus 0.1 ounce, of zinc per square foot, 30, plus or minus, 15 micrograms of chromate per square inch and high performance polymeric and shall demonstrate the ability to resist 1,000 hours of exposure to salt spray with a maximum of 5% red rust in a test conducted

in accordance with ASTM A 117. Internal surface coated, after welding, with a zinc-rich based organic coating having a 91% zinc powder loading capable of providing the ability to withstand 650 hours of exposure to salt fog with a maximum of 5% red rust, when conducted in accordance with ASTM B 117.

4. Pipe shall be straight, true to section and conform to the following weights:

Pipe Size I.D. (inches)	Type I Weight (lbs./ft.)	Type II Weight (lbs./ft.)
1 ¼	2.27	1.84
1 ½	2.72	2.28
2	3.65	3.12
2 ½	5.79	4.64
3	7.58	5.71
3 ½	9.11	6.56
4	10.79	---
5	14.62	---
6	18.97	---
8	28.55	---

B. Fabric Wire

1. Unless otherwise shown on the Drawings, fabric wire shall be 9 gage steel wire of good commercial quality. If aluminum alloy wire is called for, the wire shall be 9 gage in conformance with ASTM F 1183. The 9 gage steel wire shall have a breaking strength of 1290 lbs. and the 9 gage aluminum alloy wire shall have a breaking strength of 925 lbs. when tested in accordance with ASTM A 370.
2. Metallic coatings for steel wire shall conform to ASTM A 817. Unless otherwise shown on the Drawings, wire shall be galvanized with a zinc coating of not less than 1.20 oz./ft.^{2} of uncoated wire surface in accordance with ASTM A 392 and tested in accordance with ASTM A 90. If an aluminum coating is called for, wire shall be coated before weaving with not less than 0.40 oz./ft.^{2} of uncoated wire surface in accordance with ASTM A 491 and tested in accordance with ASTM A 428.
3. If a PVC coating is called for on the Drawings, the coating shall be Class 2a (extruded and bonded) and have a thickness at any one point of not less than 0.015 inches and not greater than 0.025 inches as measured by a micrometer. The PVC coating shall meet ASTM specifications for

adhesion, accelerated aging, mandrel bend, and color. The color shall be black. All components shall be coated.

C. Barbed Wire

1. Barbed wire shall be commercial quality, 12 1/2 gage, two-strand twisted line wire with 4 point barbs at 5-inch spacing.
2. Coating shall consist of a minimum of 0.8 ounces of zinc per square foot of wire surface area conforming to ASTM A 121 or a minimum of 0.30 ounces of aluminum per square foot of wire surface area conforming to ASTM A 585.

D. Concrete

1. ASTM C 94 Portland Cement Concrete, Type II, with a maximum 3/4-inch aggregate having a minimum compressive strength of 3,000 psi and 28 days.

2.2 COMPONENTS

A. Fence Posts

1. Fence posts shall have the following diameters:

Fabric Height (feet)	Line Post I.D. (inches)	End, Corner and Line Brace Posts I.D. (inches)
$3 \leq H \leq 6$	1 1/2	2 1/2
$6 < H \leq 8$	2	2 1/2
$8 < H \leq 12$	2	2 1/2

B. Strain Posts

Strain posts shall have the following diameters:

Gate Frame Width (feet)	Strain Post I.D. (inches)
$3 \leq W \leq 6$	2 1/2
$6 < W \leq 13$	3 1/2
$13 < W \leq 18$	6
$18 < W \leq 23$	8

C. Top and Brace Rail

Top and brace rails shall be 1 1/4 inches I.D.

Top rails shall be in lengths not less than 18 feet.

D. Gate Frame and Braces

1. Gate frame assembly shall be of Type I or Type II steel post with welded joints. Weld areas shall be repaired with zinc-rich coating applied per manufacturer's directions. Pipe diameters shall be as follows:

Gate Frame Width (feet)	Gate Frame Height (feet)	Post I.D. (inches)	Brace I.D. (inches)
$3 \leq H \leq 8$	$3 \leq H \leq 6$	1 1/4	1 1/4
$8 < H \leq 23$	6	1 1/2	1 1/4
$8 < H \leq 23$	$6 < H \leq 12$	1 1/2	1 1/2

E. Fabric

1. Unless otherwise shown on the Drawings, the fabric shall be woven in a two-inch diamond mesh.
2. Fabric up to five feet in height shall be knuckled at the top and bottom selvages. Fabric over five feet high shall be twisted and barbed on the top selvage and knuckled on the bottom selvage.
3. The fabric height shall be shall be six feet unless otherwise shown on the Drawings. The height of the fabric shall be the overall dimension from ends of twists and knuckles. The tolerance of the nominal height shall be plus or minus one inch.
4. Gate fabric wire and coating shall match fence fabric wire and coating.

F. Tension Wire

1. Tension wire shall be fabricated from Marcelled 7 gage steel wire with a minimum coating of 1.20 ounces of zinc or 0.40 ounces of aluminum per square foot of wire surface and conforming to ASTM A 824.

G. Tension and Brace Bands

1. Tension and brace bands shall be rectangular pressed steel, not less than 12 gage in thickness and 3/4 inches wide.

H. Stretcher Bar (Tension Bar)

1. Stretcher bars shall not be less than 12 gage in thickness, 3/16 by 3/4 inch in dimension, and 2 inches shorter than the normal height of the fabric with which they are to be used.

I. Tie Wire and Wire Fasteners

1. Tie wire shall be 9 gage aluminum alloy 1100-H4 or equal.

2. Wire fasteners shall be 11 gage.

2.3 ACCESSORIES:

A. Post Caps

1. Post caps shall be pressed steel, cast iron or cast aluminum alloy designed to fit snugly over posts to exclude moisture.
2. If a top rail is required on the Drawings, supply cone type caps for terminal posts and loop type for line posts.

B. Fittings

1. All fittings shall conform to ASTM F 626.
2. Rail and brace ends shall be pressed steel, cast iron or cast aluminum alloy, cup shaped to receive rail and brace ends.
3. Top rail sleeves shall be not less than 6 inches long and shall allow for expansion and contraction of the rail.
4. Truss rods shall be steel rod, 3/8 inches in diameter, merchant quality with turnbuckle.
5. Hog rings shall be 9 gage steel wire with a minimum zinc coating of 0.8 ounces per square foot of wire surface area.
6. Where a PVC-coated chain-link fence is specified, all fittings shall be color coated to match the fence fabric.

C. Extension Arms

1. Barbed wire arms shall be pressed steel, cast iron or cast aluminum alloy fitted with clips or slots for attaching three strands of barbed wire.
2. Arms shall be set outward on a 45° angle and be capable of supporting a 250-pound load at outer barbed wire connecting point without causing a permanent deflection.
3. Arms over gates shall not be sloped.

D. Gate Hardware

1. Gate latches, stops and keepers shall be provided for all gates. Latches shall have a plunger-bar arranged to engage the center stop, except that for single gates of openings less than 10 feet wide, a forked latch may be provided. Latches shall be arranged for locking.

2. Center stops shall consist of a device arranged to be set in concrete and to engage a plunger bar of the latch of double gates. No stop is required for single gates.

3. Keepers shall consist of a mechanical device for securing the free end of the gate when in the full open position..

4. Hinges shall be of adequate strength for gate. and with large bearing surfaces for clamping in position. The hinges shall not twist or turn under the action of the gate.. The gates shall be capable of being opened and closed easily by one person. Three hinges per leaf will be required.

2.4 COMPONENTS FOR TENNIS COURT FENCE

A. General

1. The materials specified above shall be modified as follows for tennis court fences.
2. The fence height shall be 10-feet.

B. Posts

1. All line terminal and gate posts shall be 2-7/8 inch O.D. with a wall thickness of 0.160 inches.
2. The steel shall have a minimum yield strength of 50,000 psi.

C. Rails

1. The fence shall be constructed with top and middle rails.
2. Rails shall be 1-5/8 inch O/D. pipe with a wall thickness of 0.111 inches.
3. The steel shall have a minimum yield strength of 55,000 psi.
4. Provide rails with 7-inch long expansion sleeve couplings.

D. Fabric

1. The fabric shall have top and bottom selvege knuckled.
2. The fabric shall have a 1-3/4 inch mesh
3. The fabric shall conform to ASTM A 392.

E. Tension Wire

1. The tension wire shall be two strands of 12 ½ gage steel wire twisted together.

PART 3 EXECUTION

3.1 GENERAL

A. Install framework, fabric, accessories and gates in conformance with ASTM F 567.

B. Post shall be spaced at equal intervals from corner or terminal posts at a spacing not exceeding 10 feet unless otherwise shown on the Drawings.

3.2 FOOTINGS

A. General

1. Posts shall be set three inches clear from the bottom of the footing. The top of the concrete footing shall be set at grade and crowned to direct water away from the posts.

2. Posts shall be securely braced to hold in proper position until such time as the concrete has set sufficiently to hold them. Unless otherwise permitted, materials shall not be installed on posts until the concrete has set sufficiently to withstand the stress.

B. Fence Posts

1. Posts shall be set plumb in 12-inch diameter concrete footings. The depth of the fence post footings below grade shall be as follows:

Fabric Height (feet)	Line Posts (inches)	End, Corner and Line Brace Posts (inches)
3 ? H ? 4	34	28
4 ? H ? 12	40	40

C. Strain Posts

1. The diameter and depth of the strain post footings below grade shall be as follows:

Gate Frame Width (feet)	Footing Diameter (inches)	Footing Depth (inches)
$3 \leq W \leq 6$	12	36
$6 < W \leq 13$	12	42
$13 < W \leq 18$	18	48
$18 < W \leq 23$	24	48

3.3 FRAMING

A. Top Rails

1. The requirement for top rail will be shown on the Drawings; otherwise a top tension wire will be used.
2. Install top rails through the line post cap loops connecting sections with sleeves to form a continuous rail between terminal posts.

B. Bracing

1. For fabric heights over four feet, brace end, corner, line brace and strain posts back to adjacent line posts with horizontal brace rails when a top rail is specified.
2. Brace gate, line and end posts back to adjacent line posts with sloping brace rails when a top rail is not specified. Diagonal truss rods are required in both cases.
3. Line brace posts shall be spaced at 400 feet maximum intervals.

C. Miscellaneous Fittings

1. One stretcher bar shall be provided for each line, end and strain post. Two shall be provided for each corner and line brace post.
2. Stretch the bottom tension wire between terminal posts at no more than four inches above the ground line and fasten to outside of the line posts with tie wires.
3. Install nuts for fittings, bands and hardware bolts on inside of fence.
4. All open pipe tops shall be capped.

3.4 FABRIC

1. Stretch fabric between end posts or at intervals of 100 feet maximum, whichever is less.
2. Pull fabric taut with the bottom selvage 2 inches above the ground line (maximum 3 inches).
3. Fasten to end, corner and gate posts with tension bars threaded through the mesh and secured with tension bands at 12 inches maximum intervals.
4. Tie the fabric to line posts and top rails with tie wires at 12 inches maximum on posts and 24 inches on rails.
5. Attach to bottom tension wire with top rings at 24 inches maximum intervals.

3.5 BARBED WIRE TOP

1. Anchor three strands of barbed wire at four-inch centers to terminal extension arms, pull taut and firmly install in slots of line post extension arms.

3.6 GATES

1. Gates shall be installed plumb, level and secure for a full opening without interference.
2. Bottom of gate shall be no more than six inches above grade.
3. Anchor center stops and keepers in concrete.

3.7 CONSTRUCTION TOLERANCES:

Maximum variation from plumb: 1/4 inch
Maximum offset from true position: 1 inch
Components shall not infringe upon adjacent property lines.

3.8 COMPLETION

A. The installation area shall be left free of debris caused by the installation of the fence.

END OF SECTION

SECTION 33 05 13
UTILITY MANHOLES

PART 1 GENERAL

1.1 WORK INCLUDED

A. Furnish and install precast concrete manhole base, sections, adjusting rings, steps, and manhole ring and cover, complete.

1.2 QUALITY REFERENCES

A. American Society for Testing and Materials (ASTM)

1. ASTM C 150 - Portland Cement
2. ASTM C 478 - Precast Reinforced Concrete Manhole Sections.
3. ASTM B 221 - Aluminum alloy, extruded bars, rods, wire, shapes and tubes.

1.3 SUBMITTALS

A. Submit manufacturer's technical descriptions of manhole sections, steps, rings, waterstop gaskets and covers.

PART 2 MATERIALS

2.1 PRECAST MANHOLE SECTIONS

A. Precast reinforced concrete manhole top sections shall be produced using Type II Portland cement and be fabricated in accordance with ASTM C 478.

B. Manhole sections shall be clearly marked with the information specified for product marking in ASTM C 478.

2.2 CAST-IN-PLACE MANHOLE BASE

A. Class B Concrete. Dimensions and reinforcement per Construction Drawings and applicable standards.

2.2 MANHOLE FRAMES AND COVERS

A. Manhole frames and covers shall be 400 pound or greater, 24, 30 or 36-inch inside diameter, as manufactured by D & L Model A-1161 with closed pick hole or approved equal.

B. Frost proof covers if required shall be D & L Model A-1019 with closed pick hole or approved equal. The ring and cover shall conform to ASTM A48-83 Class 35B.

2.3 MANHOLE STEPS

A. Manhole steps shall be polypropylene and be cast into the manhole wall at the same time that the manhole section is cast.

B. The manhole steps shall be approximately nine inches wide and 13 inches long and weigh approximately two pounds.

C. The steps shall be located no more than 28 inches from the top of the finished manhole nor more than 18 inches from the floor and be spaced no greater than 12 inches apart.

D. The step shall have a skid-resistant surface and be designed mechanically to prevent sideslip.

2.4 JOINT SEALERS

A. Flexible plastic sealant, RAM-NEK, or equivalent, is required for all horizontal-mating surfaces between precast top sections and precast slab tops of meter vaults.

2.5 JOINTS

A. All precast concrete joints shall be made with a preformed joint sealer.

B. All joints that are made with the joint sealer shall also be pointed with mortar on the inside of the section.

1. Mortar

a. Mortar used in jointing precast concrete manhole sections shall be composed of one part Portland cement and not more than three nor less than two parts of fine aggregate. Portland cement shall meet the requirements of ASTM C 150, Type II.
b. Hydrated lime or masonry cement shall not be used.
c. Fine aggregate shall consist of well-graded natural sand having clean, hard, durable, uncoated grains, free from organic matter,

soft or flaky fragments or other deleterious substances such as calcium chloride. The fine aggregate shall be thoroughly washed and shall be uniformly graded from coarse to fine with a minimum of 95% passing the #4 sieve and a maximum of 7% passing the #100 sieve.

d. All mortar shall be fresh for the work at hand.

e. Mortar that has begun to set shall not be used.

2. Joint Seals

a. Precast concrete manhole section joint seals shall meet the requirements of SECTION 33 05 14.

2.6 WATERSTOP GASKETS

A. Hamilton Kent or approved equal.

PART 3 EXECUTION

3.1 GENERAL

A. The manhole shall be constructed on a properly compacted subgrade and in such a manner that the center of the manhole coincides with the intersection of the projected centerlines of the inlet and discharge pipelines.

B. The surface shall be level to permit proper construction of the riser sections.

C. Changes in size and grade of channels for gravity pipelines such as sanitary sewers shall be made gradually and evenly using concrete made with ASTM C 150, Type II Portland cement. The invert channels may be formed directly in the concrete manhole base or may be constructed by laying sewer pipe through the manhole and cutting out the top half of the pipe after the concrete has cured and reached design strength. The floor of the manhole outside of the channels shall slope upward from the springline of the pipeline to the wall of the manhole at not less than one inch per foot nor more than two inches per foot.

3.2 PLACEMENT OF PRECAST CONCRETE BASE AND RISER SECTIONS:

A. Sections

1. Set the base and each manhole riser section such that the manhole will be plumb.
2. Use sections of various heights to bring the ring and cover to the proper grade.

3. The last riser section prior to placement of an eccentric cone or flat top shall be the shortest available but in no case greater than 24 inches in height.

B. Joints

1. Sections shall be clean and dry.
2. Mortaring of joints shall not be performed when the temperature of the air or section will be below 35° F when placing and curing unless supplemental heat is used to keep the sections warm and mortar from freezing.
3. Using Joint Sealer

a. The mating surfaces of the two sections to be joined shall be thoroughly cleaned.
b. Apply the joint sealer to the seat of the base or riser section that is already in place.
c. Only one joint is permitted in the sealer. Overlap the ends of the sealer six inches.
d. Carefully lower the second precast concrete section onto the first section so that the joint sealer compresses forming a uniform seal.
e. Each succeeding precast section shall be jointed in a similar manner.

C. Lifting Holes

1. Fill all lifting holes with mortar.

3.3 REPAIR OF IMPERFECTIONS IN SECTIONS

A. Imperfections in the precast concrete manhole base or sections shall be reviewed by the ENGINEER prior to repair.

B. The CONTRACTOR shall submit repair materials and methods to the ENGINEER for review and approval.

3.4 ADJUSTING RINGS, RING AND COVER INSTALLATION

A. Install ring and cover on one or maximum of two precast concrete adjusting rings. Each adjusting ring shall be a maximum of 8-inches high. Adjusting rings shall be placed similar to the precast concrete manhole rings, i.e., thoroughly cleaned and placed with mortar or joint sealer.

B. The total allowable height of adjusting rings, ring and cover shall be one inch less than the manufacturer's shortest precast concrete riser section.

C. Unless otherwise indicated in the Drawings, set the top of the adjusting rings such that no part of the cast iron ring and cover will project above a point ¼ inch below the finish surface of pavement.

3.5 PIPE CONNECTIONS

A. The manhole shall be thoroughly bonded to the barrel of the pipe and all connections with pipe shall be made without projections or voids.

B. All pipe shall have a Hamilton Kent (or approved equal) water stop gasket applied around the pipe. The joint between the pipe and manhole wall shall be sealed with a non-shrink grout.

3.6 ACCEPTANCE

A. Each manhole shall be watertight from infiltration and exfiltration of water.

B. When required by the ENGINEER, manholes shall be pressure tested by filling with water to the level of the top of the top riser to determine watertightness. There shall be no measurable loss of water in a one-hour time period.

C. The CONTRACTOR shall inspect and repair all visible leaks and damp spots.

END OF SECTION

SECTION 33 05 14
JOINT SEALERS FOR UTILITY MANHOLES

PART 1 GENERAL

1.1 WORK INCLUDED

A. Furnish all labor, tools, equipment and install joint sealer for precast concrete manholes and roof slabs where shown in the Drawings and as specified herein.

1.2 QUALITY STANDARDS

A. American Association of State Highway and Transportation Officials (AASHTO)

1. AASHTO M198 - Joints for Circular Concrete Sewer and Culvert Pipe Using Flexible Watertight Gaskets

1.3 SUBMITTALS

A. Gasket Material

B. MSDS Sheet

C. Manufacturer’s installation instructions

D. Primer

PART 2 PRODUCTS

2.1 GENERAL

A. Joint sealer shall be preformed, plastic gasket with hydrocarbon resins and inert mineral filler, in accordance with AASHTO M198, Type B.

2.2 PRIMERS

A. Primers shall be used when recommended by the joint sealer manufacturer.

2.3 ACCEPTABLE MANUFACTURERS

A. K. T. Snyder - Ram-Nek

B. Hamilton-Kent - Kent-Seal No. 2

C. Sheller-Globe - Tac-Tite

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean the concrete surfaces in accordance with the manufacturer's recommendations.

B. Mask edges, if required, to protect adjoining surfaces and produce a straight finish line.

C. If required by the manufacturer, prime concrete surfaces with the recommended primer. Install bond breaker tape as required by the manufacturer to ensure that the sealant will perform properly.

3.2 APPLICATION

A. Apply the sealant in continuous beads without open joints, voids or air pockets. Remove excess sealer promptly as work progresses and clean adjacent surfaces.

B. Apply the sealer in accordance with the manufacturer's printed instructions and specifications.

END OF SECTION

SECTION 33 05 26
UTILITY WARNING MARKING TAPE

PART 1 GENERAL

1.1 WORK INCLUDED

A. The CONTRACTOR shall furnish and install detectable 6-inch wide underground utility warning tape for all water and sanitary sewer pipelines regardless of pipe material.

1.2 QUALITY REFERENCES

A. American Public Works Association (APWA)

1. APWA Recommended Color Code

B. US Department of Transportation, Materials Transportation Bureau, Office of Pipeline Safety (USAS)

1. USAS code for pressure piping B31.8 paragraph 192.321 (e).

C. American Society for Testing and Materials (ASTM)

1. ASTM D 882, Test Methods for Tensile Properties of Thin Plastic Sheeting
2. ASTM D 2103, Specification for Polyethylene Film and Sheeting
3. ASTM D 2578, Test Method for Wetting Tension of Polyethylene and Polypropylene Films

1.3 SUBMITTALS

A. Product data sheets

PART 2 MATERIALS

2.1 REINFORCED DETECTABLE UNDERGROUND WARNING TAPE

A. Detectable tape shall have a 35-gauge (0.00035-inch) solid aluminum foil core with permanent printing under a protective layer to maintain the integrity and legibility of the text. The foil shall be visible from both sides.

B. Tape shall consist of a nominal 5 mil (0.005-inch) overall thickness.

C. Bottom layer shall be warp oriented, coated and closed cross-woven, ultra high molecular weight, and 100% virgin polyethylene.

2.2 PHYSICAL PROPERTIES

Property	Method	Value
Thickness	ASTM D 2103	05.0 mils (nominal)
Tensile Strength	ASTM D 882	35 lbs/in. width (13,570 psi)
Elongation	ASTM D 882	< 80%
Printability	ASTM D 2578	> 45 dynes/cm^2

2.3 COLOR CODE

Utility	Color
Electric	Safety Red
Gas, Oil, Hazardous Materials	High Visibility Yellow
Communications – telephone and cable	Safety Alert Orange
Water – potable and non-potable	Safety Precaution Blue
Sanitary Sewer	Safety Green

w2.4 ACCEPTABLE MANUFACTURER / MODEL

A. Pro-Line Detectable Underground Warning Tape manufactured by Empire Level or equivalent.

B. The tape is available from Hughes Supply Colorado, and Telephone 303-394-0000

2.6 TAPE WIDTH AND TEXT

Width (inches)	Message	Color
6	CAUTION WATER LINE BURIED BELOW	Safety Precaution Blue
6	CAUTION SEWER LINE BURIED BELOW	Safety Green
6	CAUTION ELECTRIC LINE BURIED BELOW	Safety Red
6	CAUTION GAS LINE BURIED BELOW	High Visibility Yellow
6	CAUTION TELEPHONE LINE BURIED BELOW	Safety Alert Orange

PART 3 EXECUTION

3.1 INSTALLATION

A. Install tape 18 inches below grade.

B. Overlap tape six inches. No more than two splices (overlaps) are permitted in 200 feet. No piece shall be shorter than 50 feet.

C. Tape shall be continuous along the pipe.

D. Place tape in horizontal plane to facilitate reading of text.

END OF SECTION

SECTION 33 12 17
3-INCH THROUGH 12-INCH GATE VALVES

PART 1 GENERAL

1.1 WORK INCLUDED

A. Furnish, install, and test all valves and hydraulic appurtenances.

1.2 GENERAL

A. All gate valves shall conform to AWWA C509 Standard for Resilient-Seated Gate Valves for Water and Sewage Systems.

B. The additional requirements and exceptions to the AWWA standards contained herein shall also be applicable.

C. Buried valves with diameters of 3 inches to 12 inches shall be installed vertically on horizontal pipelines without gearing, by-passes, rollers or tracks. Buried valves shall have mechanical joint ends.

D. Valves shall have gray or ductile iron body, fully bronze-mounted, with non-rising stem.

1.3 QUALITY STANDARDS

A. American Water Works Association (AWWA)

1. AWWA C509 - Standard for Resilient-Seated Gate Valves for Water and Sewerage Systems.
2. AWWA C550 - Standard for Protective Interior Coatings for Valves and Hydrants

1.4 SUBMITTALS

A. Submit shop drawings including information on operable pressure ranges, temperature tolerances, standard service operating conditions, and functions of the particular valve and required operating appurtenances.

1.5 QUALITY STANDARDS:

A. General

1. Valves contained in this and referenced sections shall be produced in full compliance with specified items and any references to codes and standards.

2. Abbreviated forms of more commonly referenced standards are as follows:

a. AGMA - American Gear Manufacturers Association
b. ANSI - American National Standards Institute
c. ASTM - American Society for Testing and Materials
d. AWWA - American Water Works Association
e. MSS - Manufacturers Standardization Society of the Valve and Fittings Industry

B. End Connections

1. The CONTRACTOR shall furnish valves with end connections as shown on Drawings. End types shall comply with the following specifications:

a. Mechanical Joints

(1.) All components of this type of joint shall conform to ANSI 21.11/AWWA Standard C111, Rubber-Gasket Joints for Cast-Iron and Ductile-Iron Pressure Pipe and Fittings. The bolts and hexagon nuts shall be fabricated from high-strength, low alloy steel conforming to ASTM A 242 and known in the industry as “Cor-Ten" or "Usalloy".

(2.) Accessories for the mechanical joint consisting of the gasket, gland and fasteners shall be furnished and packaged separately from the valves. Each package shall be labeled in such a manner as to provide for proper identification and number of units per package or bundle.

b. Flanged Joints

(1.) Flanges shall be drilled in accordance with ANSI-B16.1 Class 125 Cast-Iron Flange Specifications unless otherwise shown on the Drawings.

(2.) Unless called out otherwise on the Drawings, flanges shall be machined to a flat face with a finish of 250 micro-inches AARH maximum or machined to a flat surface with a serrated finish in accordance with AWWA Standard C207, Section 6 for Steel Pipe Flanges.

(3) Flange gaskets shall be one-eighth (1/8) inch ring type "Garlock".

(4.) All thread studs shall be used on all valve flange connections and shall be in accordance with ASTM Standard Designation A 307, Grade B, with heavy hex nuts.

1.6 SERVICE

A. All valves shall be suitable for frequent operation as well as service involving long periods of inactivity.

B. The operating pressure for all sizes shall be 200-psi gauge.

1.7 VALVE OPERATORS

A. Where shown in the Drawings, gate valves shall be equipped with a handwheel. Manual operation of the handwheel shall not require more than 50 pounds of rim pull.

B. Unless otherwise shown in the Drawings, the valve shall be equipped with a standard two-inch square wrench nut.

1.8 VALVE STEMS

A. Valve stems shall be threaded so that valves shall close by turning to the left (counterclockwise), open right (clockwise).

B. Each valve shall be furnished with a two-inch square wrench nut.

C. The diameter of the stem and number of turns to open shall be in conformance with AWWA C 509.

1.9 VALVE OPERATING NUT EXTENSION SHAFT

A. All valves that have an operating nut at a depth greater than five feet below finish grade shall have an operating nut extension shaft.

B. The shaft shall bring an operating nut to within 18 inches of finished grade.

C. The operating nut extension shaft shall be made of similar material and size to the valve operating shaft.

1.10 STEM SEALS

A. The stem seal shall consist of two O-rings, designed to permit replacement of the seal above the thrust collar with the valve under pressure in the full-open position.

B. The stem seals shall be in conformance with Section 4.4.6 of AWWA C 509.

1.11 VALVE BOXES

A. Valve boxes shall be three-piece adjustable screw type, six-inch diameter, manufactured by the Tyler Pipe Company series #6860 with #160 oval base or an approved equal.

B. Valve box covers shall be marked with the word “WATER” and shall have a lip or flange extending into the valve box shaft.

C. No slip-type boxes will be permitted.

1.12 ACCEPTABLE MANUFACTURERS

A. American Darling

B. Clow

C. Mueller

D. M & H

1.13 IDENTIFICATION

A. All valves shall have the manufacturer and size of the valve visibly cast on the body or on a plate attached to the body of the valve.

1.14 AFFIDAVIT OF COMPLIANCE

A. The manufacturer of valves supplied under this Specification shall furnish to the ENGINEER, an affidavit of compliance in accordance with all applicable provisions of AWWA C504 and AWWA C509 as modified or supplemented herein.

PART 2 MATERIALS

2.1 BRASS AND BRONZE COMPONENTS

A. Brass and bronze components of valves and appurtenances in contact with water and brass or bronze used in any part of a valve in buried or submerged service shall be alloys containing less than 16 percent zinc and 2 percent aluminum.

B. Acceptable alloys

1. Acceptable alloys shall be in accordance with the following ASTM designations:

   B 61, B 62, B 98 (Alloy A, B, or D), B 139 (Alloy A), B 143 (Alloy 1-B), B 164, B 194, B 292 (Alloy A), and B 127.

C. Stainless Steel

1. Stainless steel Alloy 18-8 may be substituted for bronze at the option of the manufacturer with the acceptance of the ENGINEER.

2.2 FLANGE FINISH

A. Unless called out otherwise on the Drawings, flanges shall be machined to a flat face with a finish of 250 micro-inches, AARH maximum, or machined to a flat surface with a serrated finish in accordance with AWWA C207.

2.3 VALVE BOX

A. Valve box parts shall be made of gray cast iron in compliance with the requirements of ASTM A48 or ASTM A 126.

2.4 BOLTS AND HEX NUTS

A. Bolts and hex nuts used on the valve shall be the manufacturer's standard, either fabricated from a low-alloy steel for corrosion resistance or electroplated with zinc or cadmium. The hot-dip process in accordance with ASTM Standard Designation A 153 is not acceptable for the threaded portions of the bolts and nuts.

B. Bolts and hex nuts used on bonnet of the valve shall be the manufacturer's standard, either fabricated from a low-alloy steel for corrosion resistance or electroplated with zinc or cadmium.

2.5 GASKETS

A. The flat gaskets, either ring type or full-faced type, required at the bonnet connections shall be fabricated from compressed asbestos sheet with a rubber compound binder.

B. Use of a homogeneous rubber or vegetable fiber sheet for fabrication of gaskets is not acceptable.

2.6 PAINTING

A. Coating shall be applied to the ferrous parts of the valve except for finished or bearing surfaces.

1. Internal surfaces.

a. All internal ferrous surfaces except finished or bearing surfaces shall be prepared for coating by sandblasting to a "Near White Metal Finish" per SSPC-SP-10.
b. These surfaces shall then be coated with a two-part thermosetting polyamide epoxy in two or more uniform coats to a minimum dry film thickness of 12 mils.
b. Epoxy coating shall conform to AWWA C550 and shall be Engard 460, Keysite 750 or equal.

2. External surfaces.

a. All exterior surfaces except finished or bearing surfaces shall be carefully prepared by removing all dirt, grease, and rust and shall be cleaned to the extent that the coating will bond to all surfaces.
b. The exterior of each valve except flange faces shall be shop epoxy coated to conform to AWWA C550 and shall be Engard 460, Keysite 750 or equal.

PART 3 EXECUTION

3.1 PRIOR TO INSTALLATION

A. Carefully clean valves of all foreign material and inspect valves in open and closed positions.

B. Notify ENGINEER and do not install the valves if they do not function properly for the intended purpose.

C. Prior to installing valves, the flanged faces or threaded ends shall be thoroughly cleaned.

3.2 INSTALLATION

A. Installation practices shall conform to manufacturer's recommendations.

B. After cleaning threads, apply acceptable joint compound.

C. After cleaning flanges, insert the gasket and tighten the nuts progressively and uniformly. If flanges leak under pressure, loosen the nuts, reseat or replace the gasket, retighten the nuts, and retest the joints.

D. Bolt holes of flanged valves shall straddle the centerline of the pipe run.

E. Unless otherwise shown in the Drawings install valves with the operating nut set vertically and set plumb.

F. All underground valves shall be installed with cast-iron valve boxes set over the valve with no weight bearing on the valve or pipe.

G. All underground valves shall be coated with bituminous material and encased in polyethylene.

3.3 TESTING

A. Valves shall be tested at the same time that the adjacent pipeline is tested.

B. If there are any special parts of control system or operators that might be damaged by the pipeline test, they shall be properly protected. The CONTRACTOR will be held responsible for any damage caused by the testing.

C. Joints shall show no visible leakage under test. Repair joints that show signs of leakage prior to final acceptance.

END OF SECTION

SECTION 33 12 19
FIRE HYDRANTS

PART 1 GENERAL

1.1 WORK INCLUDED

A. The CONTRACTOR shall furnish all labor, materials, tools, equipment and perform all work and services necessary for, or incidental to, the furnishing and installing of all dry-barrel hydrants as shown in the Drawings and specified herein.

B. If a conflict exists between the hydrants specified herein and the OWNER's specified hydrants, the OWNER's specification shall control.

1.2 SUBMITTALS

A. Statement of conformance with applicable AWWA Specifications

B. Manufacturer's cut sheets

1.3 QUALITY STANDARDS

A. American Water Works Association (AWWA)

1. AWWA C104 - Cement Mortar Lining for Ductile-Iron Pipe and Fittings for Water
2. AWWA C105 - Polyethylene Encasement for Ductile-Iron Piping for Water and Other Liquids
3. AWWA C110 - Ductile-Iron and Grey-Iron Fittings, 3 in. Through 48 in. for Water and Other Liquids
4. AWWA C500 - Gate Valves for Water and Sewerage
5. AWWA C502 - Dry-Barrel Fire Hydrants
6. AWWA C600 - Installation of Ductile-Iron Water Mains and Their Appurtenances
7. AWWA C651 - Disinfecting Water Mains

B. American Society for Testing and Materials (ASTM)

1. ASTM A 242 – Specification for High-Strength Low-Alloy Structural Steel

1.4 SERVICE

A. All fire hydrants shall be designed for a working pressure of 150 psi.

B. Each factory assembled unit shall be hydrostatically tested in accordance with the applicable specifications.

C. Shop tests for the body and main valve shall be subjected to a hydraulic pressure of 300 psi.

1.5 SIZE

A. Hydrants shall have a main valve opening size of 5 1/4 inches.

1.6 HYDRANT TYPE:

A. Hydrants shall be three-way with two hose nozzles and one pumper nozzle located in the same plane with the center line of the hydrant run.

B. The pumper nozzle shall be at least 18-inches above the ground line.

1.7 ACCEPTABLE MANUFACTURERS

A. AVK Modern 2700

B. Waterous Pacer Model WB-67-250.

1. Hydrant shall include a bronze show providing bronze to bronze seating for the main valve complete with O-rings for sealing.
2. Furnish shaft coupling fabricated of Bronze material in place of the standard aluminum coupling.

1.8 CERTIFICATION

A. The manufacturer shall provide a sworn statement that all hydrants are in conformance with AWWA C502 as modified or specified herein.

PART 2 MATERIALS

2.1 GENERAL

A. All fire hydrants shall be designed and manufactured in strict conformance with AWWA C502.

2.2 INLET CONNECTION

A. The hydrant shall be provided with a mechanical joint inlet to accommodate 6-inch diameter ductile-iron pipe complete with rubber gasket, gland, bolts and nuts in conformance with ANSI A21.11.

B. The bolts and nuts hall be a high-strength low-alloy corrosion resisting steel, “Cor-Ten” or equal, with a minimum yield strength of 50,000 psi conforming to ASTM A 242.

2.3 MAIN VALVE ASSEMBLY

A. The main valve of the hydrant shall be a 5 1/4 inch diameter compression type which closes with the water pressure. The seat ring shall be bronze with a machined face and external threads for threading into a bronze drain ring or a bronze bushed shoe to provide bronze to bronze seating for the main valve, complete with O-rings for sealing.

B. The gasket for the valve shall be a replaceable type fabricated from a resilient material with a threaded bottom plate or nut complete with seal to prevent leakage from the hydrant.

C. The valve assembly shall include one or more drain valves that will work automatically with the main valve and drain the barrel of the hydrant when the main valve is in the closed position. All drain tubes shall be bronze lined and sized large enough for the barrel to drain within 12 minutes when the barrel is size for a five foot trench depth.

D. All parts of the main valve assembly shall be so designed that removal of the assembly from the barrel is accomplished without excavation.

2.4 OPERATING NUT SHAFT

A. The operating nut shall be pentagon shaped with a finished height of 1 1/8 inch. The dimensions from point-to-flat are 1 3/8 in. at the top and at the bottom of the nut. Bushings in the bonnet shall be so constructed that it will prevent the operating nut from traveling during opening or closing operation. The bushing shall also house a gasket or seal to prevent moisture or foreign material from entering the lubricant reservoir.

B. The hydrant shall open by turning the operating nut to the left in a counter-clockwise direction and shall have an arrow on top of the bonnet to designate the opening direction.

2.5 PUMPER NOZZLE AND CAP

A. The pumper nozzle shall be 4 1/2 inch nominal diameter with six threads per inch. The threads shall be right hand.

B. The nozzle cap shall be furnished with a synthetic rubber gasket installed in a retaining groove and the dimensions and shape of the nozzle cap nut shall be the same as the operating nut.

C. Nozzle caps shall be furnished with security chains with one end of each securely attached to the upper barrel section of the hydrant.

2.6 HOSE NOZZLE AND CAPS

A. The two hose nozzles shall be 2 1/2 inch nominal diameter with seven and one-half threads per inch. Threads shall be right hand and National Standard in accordance with NFPA No. 194. Each hose nozzle shall include a nozzle cap with nut and security chain.

2.7 NOZZLE ATTACHMENT

A. The hose and pumper nozzles shall be threaded and locked in place by a stainless steel pin or screw. Sealing of the threaded connections shall be accomplished by the use of O-ring gaskets.

2.8 COLOR

A. The upper exposed section of the hydrant above ground shall be given a prime coat of synthetic red lead primer Type IV-TFP-86a followed by one shop coat of alkyd enamel paint conforming to the OWNER's standards.

B. The buried portion of the hydrant shall be coated in accordance with AWWA C106.

PART 3 EXECUTION

3.1 PRIOR TO INSTALLATION

A. Carefully clean all hydrants of foreign materials and inspect hydrants in the open and closed positions.

3.2 INSTALLATION

A. Hydrants shall be installed in accordance with AWWA C600 and AWWA Manual M17.

1. Install the hydrant in accordance with the manufacturer's written requirements and specifications.
2. Set all hydrants plumb and located as shown in the Drawings.
3. Underground Valves

    a. All underground valves shall be installed with cast-iron valve boxes set over the valve with no weight bearing on the valve or pipe.
    b. All underground valves shall be in conformance with Section 15109.

4. Polyethylene Encasement

    a. The entire hydrant shall be encased in polyethylene in conformance with AWWA C105.

E. Restraint

    a. Hydrant runs shall be restrained in conformance with the Drawings and applicable specifications.

3.03 TESTING

A. All hydrants shall be tested at the same time that adjacent pipelines are tested in accordance with SECTION 33 14 00 – PIPELINE HYDROSTATIC TESTING.

B. Joints shall show no visible leakage during the testing. The CONTRACTOR shall repair joints that show visible leakage.

END OF SECTION

SECTION 33 12 20
COMBINATION AIR-VACUUM VALVES

PART 1 GENERAL

1.1 GENERAL

A. Combination air release valves shall be designed to exhaust large volumes of air from the pipeline when the system is filled with water and to allow large volumes of air to enter the pipeline when the system is drained.

B. The air and vacuum relief portion of the valve shall have a discharge orifice area which is equal to or greater than the valve inlet.

C. The valve shall also be capable of venting small quantities of entrained air which can accumulate at high points in the pipeline during system operation. Entrained air shall be vented under pressure by means of a small, independently controlled orifice.

D. Bosses for tapping pipe threads shall be cast integrally with each valve.

1.2 QUALITY STANDARDS:

A. American Water Works Association (AWWA)

1. AWWA C512, Air Release, Air/Vacuum and Combination Air Valves for Water Works Service

B. American Society for Testing and Materials (ASTM)

1. ASTM A 27, Specification for Steel Castings, Carbon, for General Application
2. ASTM A 126, Specification for Gray Iron Castings for Valves, Flanges and Pipe Fittings
3. ASTM A 240, Specification for Heat-Resisting Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels
4. ASTM A 536, Specification for Ductile Iron Castings
5. ASTM B 124, Specification for Copper and Copper Alloy Forging Rod, Bar, and Shapes
6. ASTM D 4181, Specification for Acetal (POM) Molding and Extrusion Materials

1.3 SIZE OF ORIFICES

A. Unless otherwise shown in the Drawings, the diameter of the large orifice of the combination air valve shall be two inches and the small orifice diameter shall be 3/32 inch.

1.4 INLET

A. Unless otherwise shown in the Drawings, the inlet shall be two inches in diameter with tapered iron pipe thread conforming to AWWA C800.

1.5 GUARD VALVE AND CONNECTING PIPE

A. The guard valve to be used with the air valve shall be a bronze ball valve with female iron pipe thread ends, Ford FB 400 series, Mueller H15204 or equal, approved by the ENGINEER.

B. Connections between the air valve and the guard valve shall be made using brass nipples with tapered iron pipe threads conforming to AWWA C800.

1.6 SERVICE

A. The combination air release valve shall be designed for a maximum working pressure of 250 PSI.

1.7 CERTIFICATION

A. The manufacturer shall furnish a sworn statement that the inspection and all the certified tests have been made and that the results comply with the applicable standards.

1.9 ACCEPTABLE MANUFACTURERS

A. ARI USA Inc D-040

B. GA Industries 945 Series

PART 2 MATERIALS

2.1 VALVE BODY AND COVER

A. The combination air valve shall be the single body type. The materials shall conform to one of the following designations:

1. Cast Iron - ASTM A 126 Grade B
2. Cast Steel - ASTM A 27 Grade U60-30
3. Ductile Iron - ASTM A 536 Grade 65-45-12

2.2 INTERNAL PARTS

A. Float

1. The float shall be stainless steel meeting the requirements of ASTM A 240.

B. Internal Levers

1. The internal levers shall be stainless steel meeting the requirements of ASTM A 240.

C. Needle and Seat

1. The needle and seat shall be made from oil resistant synthetic rubber, Buna-N, or equal.

D. Leverage Frame

1. The leverage frame shall be fabricated from Delrin conforming to ASTM D 4181.

E. Plug

1. The plug shall be fabricated from bronze conforming to ASTM B 124.

F. Other Internal Parts

1. All other internal parts shall be fabricated from bronze.

PART 3 EXECUTION

3.1 PRIOR TO INSTALLATION

A. Cleaning

1. Carefully clean valves of all foreign material and inspect valves in open and closed positions.

2. Notify ENGINEER and do not install the valves if they do not function properly for the intended purpose.
3. Prior to installing valves, the flanged faces or threaded ends shall be thoroughly cleaned.

3.2 INSTALLATION

A. Installation Practices

1. Installation practices shall conform to manufacturer's recommendations.

2. Prior to installation, thoroughly remove all oil, scale and dirt from the threads.

B. Joint Compound

1. After cleaning threads, apply acceptable joint compound.

C. Vertical Alignment

1. Install valves as shown on the Drawings and set plumb.

3.3 TESTING

A. Valves

1. Valves shall be tested at the same time that the adjacent pipeline is tested.

B. Appurtenances

1. If there are any special parts of control system or operators that might be damaged by the pipeline test, they shall be properly protected.
2. The CONTRACTOR will be held responsible for any damage caused by the testing.

C. Visible Leakage

1. Joints shall show no visible leakage under test.
2. Repair joints that show signs of leakage prior to final acceptance.

END OF SECTION

SECTION 33 12 43
BOLTED SLEEVE TYPE COUPLINGS, HIGH DEFLECTION FITTINGS (COUPLINGS), FLANGE ADAPTERS AND FLEXIBLE CONNECTORS

PART 1 - GENERAL

1.1 WORK INCLUDED

A. The CONTRACTOR shall furnish and install all bolted sleeve type couplings, flange adapters, flexible connectors and insulating kits as shown in the Drawings.

B. Materials strength ratings shall be consistent with the pressure class of pipe used.

1.2 SUBMITTALS:

A. Manufacturers data sheets.

1.3 QUALITY STANDARDS

A. American Society for Testing and Materials (ASTM)

1. ASTM A 47, Specifications for Ferritic Malleable Iron Castings
2. ASTM A 53, Specifications for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless
3. ASTM A 126, Specifications for Gray Iron Castings for Valves, Flanges, and Pipe Fittings (Grade B)
4. ASTM A 325, Specifications of r High-Strength Bolts for Structural Steel Joints
5. ASTM A 512, Specifications for Cold-Drawn Buttweld Carbon Steel Mechanical Tubing
6. ASTM A 536, Specification for Ductile-Iron Castings
7. ASTM A 715, Specification for Steel Sheet and Strip, High-Strength, Low-Alloy, Hot-Rolled, and Steel Sheet, Cold-Rolled, High-Strength, Lowe-Alloy, with Improved Formability

B. American National Standards Institute (ANSI) American Water Works Association (AWWA)

1. ANSI/AWWA C153/A21.53, 3 In. Through 24 In. for Ductile-Iron Compact Fittings and 54 In. Through 64 In. for Water Service

PART 2 MATERIALS

2.01 GENERAL

A. Bolted Sleeve Type Couplings and Flange Adapters

1. Bolted sleeve type couplings and flange adapters shall be designed to relieve mechanical stress in pipelines due to thermal expansion and contraction, differential settlement, and to facilitate pipeline construction.
2. Bolted sleeve type couplings shall consist of a sleeve that fits over the ends of the two pipeline sections to be joined.
3. The coupling shall form a water tight seal be compressing resilient wedge-shaped gaskets between the ends of the sleeve and the pipelines.
4. The gaskets shall be compressed by two retainer rings bolted to one another on the outside perimeter of the coupling sleeve.

B. Flange Adapters

1. Flange adapters are special flexible couplings that have one retainer ring and gasket replaced by a flange joint on the coupling sleeve.

C. Insulating and Reducing Bolted Sleeve Type Couplings

1. Insulating couplings with bolt and nut insulating kits shall be used when joint pipes of dissimilar materials.

D. High Deflection Fittings (Coupling)

1. High deflection couplings shall permit up to four (4) times the accepted joint deflection of DI pipeline fittings and sleeves.
2. The fitting shall have a thrust restraint system integral to the fitting.

2.2 Acceptable Manufacturers

A. Bolted Sleeve Type Couplings

1. Dresser Style 38
2. Smith Blair (Rockwell) Style 411
3. Romac, Series 400
4. Baker, Series 200

B. Flange Adapters for Ductile Iron Pipe

1. Dresser Style 127
2. Rockwell Product No. 912

C. Flange Adapters for Steel Pipe

1. Dresser Style 128
2. Rockwell Product No. 913

D. Transition Couplings

1. Dresser Style 162
2. Rockwell Product No. 413

E. Insulating Bolted Sleeve Type Couplings

1. Dresser Style 39

F. Insulating – Transition (Reducing) Bolted Sleeve Type Couplings

1. Dresser Style 39-62

G. Flexible Connectors

1. Metra-Flex Style R

H. High Deflection Fittings (Couplings)

1. U.S. Pipe "Xtra Flex"

2.2 SLEEVE AND FLANGE ADAPTER BODIES:

A. Sleeve and flange adapter bodies shall be fabricated from cast iron, malleable iron or carbon steel in conformance with the following ASTM Standards:

1. ASTM A 126, Grade B
2. ASTM A 47
3. ASTM A 53
4. ASTM A 512

5. ANSI/AWWA C153/A21.53

2.3 RETAINER RINGS

A. Retainer rings shall be malleable iron, ductile iron or high carbon steel conforming to the following ASTM Standards:

1. ASTM A 47
2. ASTM A 536
3. ASTM A 715

2.4 BOLTS

A. Bolts shall be high strength alloy steel, with heavy hexagon nuts in conformance with ASTM A325.

2.5 GASKETS

A. Gaskets shall be synthetic rubber.

2.6 FLEXIBLE CONNECTORS

A. Units shall be constructed of neoprene and nylon.

B. Flanges shall be tapped or drilled to mate with ANSI 150 pound companion flanges.

C. Flexible connectors shall be capable of operating up to 240 degrees and 125 psi pressure/vacuum service conditions.

PART 3 EXECUTION

3.1 GENERAL

A. Install all bolted sleeve type couplings, flange adapters, high deflection fittings (couplings), flexible connectors and insulating bolted sleeve type couplings in accordance with the manufacturer's recommendations.

B. Prior to installation, thoroughly remove all oil, scale and dirt from the coupling or adapter to provide a clean set for the gasket.

C. Clean the gasket immediately prior to installation.

D. Tighten bolts progressively around the retainer gland until all bolts have a uniform torque. Final tightening shall be performed with a torque-limiting wrench to the torque level recommended by the manufacturer.

E. Install restraint rods, Meg-a-lugs, and insulating kits, where required, to provide restraint for pipeline thrust.

END OF SECTION

SECTION 33 12 53
GROOVED PIPE COUPLINGS

PART 1 GENERAL

1.1 WORK INCLUDED

A. The CONTRACTOR shall furnish and install all grooved pipe couplings as shown in the Drawings.

B. Materials strength ratings shall be consistent with the pressure class of pipe used.

C. The CONTRACTOR is responsible for coordinating the grooved pipe coupling with the outside diameter of the pipe to insure a proper installation.

1.2 SUBMITTALS

A. Manufacturer's data sheets

B. Installation procedures

1.3 QUALITY STANDARDS

A. American Water Works Association (AWWA)

1. AWWA C606 - Grooved and Shouldered Joints

B. American Society for Testing and Materials

1. ASTM A 47, Specifications for Ferritic Malleable Iron Castings
2. ASTM A 193, Specification for Alloy-Steel and Stainless Steel Bolting Materials for High-Temperature Service
3. ASTM A 536, Specifications for Ductile-Iron Castings
4. ASTM D 2000, Classification System for Rubber Products in Automotive Applications

1.4 DELIVERY, STORAGE AND HANDLING:

A. See SECTION 01 66 00 – DELIVERY STORAGE AND HANDLING

1.5 ACCEPTABLE MANUFACTURER

A. Mechanical grooved pipe couplings and fittings as manufactured by Victaulic™ Company of America or equal shall be used as shown in the Drawings.

B. The grooved-end product manufacturer shall be ISO-9001 certified.

1.6 SERVICE

A. The coupling will be used to connect potable water pipelines with water temperatures less than 100° F and pressures equal to or less than 150 PSI.

PART 2 MATERIALS

2.1 COUPLINGS

A. Couplings for 6 through 24-inch diameter steel pipe shall be Victaulic Style 77 cast of ductile iron conforming to ASTM A 536 or malleable iron conforming to ASTM A 47 with an alkyd-phenolic primer coating with a synthetic rubber gasket.

B. Couplings for 30, 36 and 42-inch diameter steel pipe shall be Victaulic Style 770 cast of ductile iron conforming to ASTM A 536 or malleable iron conforming to ASTM A 47 with an alkyd-phenolic primer coating with a synthetic rubber gasket.

B. Couplings for ductile-iron pipe shall be Victaulic Style 31 cast of ductile iron conforming to ASTM A 536 or malleable iron conforming to ASTM A 47 with an alkyd-phenolic primer coating with a synthetic rubber gasket.

B. Bolts and nuts shall conform to ASTM A 193, Grade B 8, Class 2 (Type 304 stainless steel).

2.2 PIPE MATERIALS

A. Pipe materials shall conform to AWWA C606, or the coupling manufacturer's recommendations for rigid grooving dimensions.

2.3 GASKETS

A. Gaskets shall be flush seal design molded of synthetic rubber specially compounded to conform to the pipe surfaces with a short center leg that shall bridge the pipe ends offering an initial seal on the leading edge of the pipe ends.

B. Elastomers shall have properties as designated in ASTM D 2000.

PART 3 EXECUTION

3.1 ASSEMBLY AND INSTALLATION

A. Pipe ends shall be clean and free from indentations, projections and roll marks in the area from the pipe end to groove for proper gasket sealing.

B. The gasket style and elastomeric material shall be verified as suitable for the intended service specified.

C. A thin, uniform, coat of Victaulic lubricant or other non-petroleum based lubricant shall be applied to the gasket coupling by brush or hand.

D. The gasket shall be placed over one pipe end, the pipe ends aligned and brought together, and the gasket positioned between the grooves and pipe ends.

E. The coupling housing shall be assembled over the gasket with housing keys engaging both grooves. The bolts shall be inserted and nuts started, uniformly tightened until the housing nut pads are firmly together, metal to metal.

END OF SECTION

SECTION 33 16 20
WATER STORAGE TANK (WST)
CLEANING, DISINFECTING AND TESTING

PART 1 GENERAL

1.1 WORK INCLUDED

A. This section of the Specifications will govern the cleaning, disinfection and testing of the tank. All appurtenant operations involving cleaning, disinfecting and testing shall be done in strict conformance with the Drawings and other terms and conditions of the Contract. All standard specifications made a portion of these Specifications by reference shall be the latest edition and revision thereof.

B. It is the intent of this Specification to be in conformance with AWWA C652 and all local, state, and federal standards. In the event a conflict occurs between this Specification and AWWA C652 and/or the local, state or federal regulation, AWWA C652 or the local, state or federal regulation shall in all cases prevail.

C. Unless otherwise determined by the ENGINEER, the tank shall be complete and ready to be placed into service prior to cleaning, disinfecting and testing. All hatches and vents shall be in place. During testing the tank shall be kept locked, except during measurement of the change in water level, and security systems and procedures in place to prevent contamination of the stored water.

1.2 QUALITY STANDARDS

A. American Water Works Association (AWWA)

1. C652 - Disinfection of Water-Storage Facilities
2. D115 - Circular Prestressed Concrete Water Tanks with Circumferential Tendons

B. American Concrete Institute (ACI

1. ACI 350.1 - Tightness Testing of Environmental Engineering Concrete Structures

PART 2 PRODUCTS

2.1 GENERAL

A. Materials used in the work shall conform and meet the requirements for the class and type of material named.

2.2 FORMS OF CHLORINE

A. The forms of chlorine that may be used in the disinfecting of the tank are liquid chlorine and sodium hypochlorite solution.

PART 3 EXECUTION

3.1 WATER AVAILABILITY

A. Water for water tightness testing may not be available when construction of the water storage tank is complete due to variables in system facility operation.

B. The Contract Time for the completion of the water storage tank will be extended should this occur. However, the OWNER will not be liable for costs associated with any suspension in the CONTRACTOR's work due to water not being available.

3.2 CLEANING

A. All scaffolding, tools, and any other material, which is not part of the structure or operating facility of the tank, shall be removed.

B. After the ENGINEER has reviewed the tank, the floor shall swept clean, and the surfaces of the walls, floor, and roof cleaned thoroughly using a high-pressure (200 psi or higher) water jet.

C. All water, dirt, and foreign material accumulated in these cleaning operations shall be discharged through the floor drain or otherwise removed.

D. The inlet/outlet pipe shall be capped to prevent entry of dirt and foreign matter during the cleaning operations.

E. Following cleaning, the vent screens shall be checked for correct placement to prevent birds, insects, and other contaminants from entering the facility. The hatches shall be kept closed after cleaning and locked during non-working hours.

3.3 DISINFECTING

A. After the cleaning operations are complete the ENGINEER shall review the tank prior to the disinfecting procedure. After the review, the CONTRACTOR shall dis-

infect the tank using AWWA C652, Chlorination Method 2, summarized as follows:

B. A solution of 200-mg/L available chlorine shall be applied directly to all the surfaces of the tank, including the floor, walls, underside of roof, and exposed piping such as the overflow and wash down piping.

C. The chlorine solution shall be applied by spray equipment, and shall thoroughly coat all surfaces, and shall be applied to any separate drain piping such that it will have available chlorine of not less than 10 mg/L when filled with water.

D. The disinfected surfaces shall remain in contact with the strong chlorine solution for at least 30 minutes, but no more than eight hours, after which potable water may be admitted into the tank. The drain pipeline purged of highly-chlorinated water and the tank filled for bacteriological and watertightness testing.

3.4 TESTING – GENERAL

A. After the water storage tank has been cleaned and disinfected the CONTRACTOR shall conduct tightness testing.

B. Backfill shall not be placed until after an acceptable tightness test.

C. Unless otherwise permitted by the OWNER the water storage tank shall be filled at a rate of no more than four feet per day.

1. Higher fill rates may be possible but depend upon the preliminary water tightness of the water storage tank and the ability of the OWNER to provide water for filling and testing and also meet demands in the water system.

D. The water storage tank shall pass both the quantitative and qualitative (visual) tightness tests.

E. The ENGINEER will determine the testing time period after assessing the initial overall performance of the tank testing.

F. The ENGINEER may terminate the tightness test if, in his opinion, the tank appears extremely watertight or if it appears that the tank will fail the quantitative or visible water tightness test.

G. The ENGINEER may also terminate the testing early if the OWNER desires to place the tank in service to meet system operation needs.

H. The test shall meet the requirements of AWWA D115 Class A water tightness and ACI 350.1 HST as modified to 0.0125% and HST-VIO criteria also as modified herein.

I. If the quantitative loss of water is acceptable, but visible water loss is unacceptable, the testing shall not be considered acceptable until all visible signs of water loss are corrected.

J. Hydrophilic waterstops that are used in the vertical wall joints may require up to 35 days to perform as intended. Water loss through vertical wall joints shall be monitored by the ENGINEER to determine waterstop performance and acceptability for a passing test.

K. The hydrophobic waterstop used at the wall - footing joint may experience some water loss after grout injection until the grout has sufficient time to react to the presence of water. Similar to the hydrophilic waterstop, any water loss shall be monitored by the ENGINEER to determine waterstop performance and acceptability for a passing test.

L. If the wall of the water storage tank is to receive a rubbed or grout finish the finish work shall not be performed until after the tightness testing is completed.

3.5 QUANTITATIVE WATER TIGHTNESS TESTING

A. After the water storage tank is filled to within three inches of the overflow level, or a level acceptable to the ENGINEER, the water storage tank shall be permitted to remain full for a period up to three days after which the water tightness test shall be conducted for a time period ranging from two days to seven days or until the time period is exceeded for the Class A criteria.

B. Depending on the tank capacity and apparent performance of the tightness testing, the ENGINEER may shorten or lengthen testing time period.

C. The ENGINEER may waive or reduce the three-day water/concrete absorption time period depending on the time taken to fill the tank.

D. The loss of water shall be determined by measuring the drop in the water surface in the water storage tank.

E. The ENGINEER may conduct an evaporation test concurrently with the water tightness test.

F. The acceptable loss of water during the water tightness test time period shall be equal to or less than that specified in AWWA D115 Class A criteria of 0.0125% of the volume of the water column height over a 24 hour time period.

G. If the loss of water exceeds the acceptable quantitative loss during the testing time period, but the trend in water loss is improving, the ENGINEER may re-start the test.

H. If a failing quantitative test occurs, the CONTRACTOR shall be responsible for determining and remedying the cause of test failure. The ENGINEER shall review and accept the CONTRACTOR's recommendations prior to performing any repair work.

3.6 VISUAL WATER TIGHTNESS TESTING

A. Visual Water Loss

1. Visual water loss through concrete structure components, such as walls, and from features such as joints and tie holes is cause for visual testing failure.
2. Visual water loss is defined in AWWA D115.
3. Regardless of a passing visual test any damp spots in exposed surfaces such as walls shall be repaired.

    a. The CONTRACTOR shall be responsible for the means and methods of repair.
    b. The ENGINEER shall review and accept the CONTRACTOR's recommendations prior to performance of the repair work.
    c. Damp spots shall be repaired prior to performing any surface finish work, such as a rubbed or grout finish.

B. The ENGINEER has the sole responsibility and authority to determine and define visual water loss.

3.7 RE-TESTING

A. If the water storage tank is drained to remedy the cause of water loss, the CONTRACTOR shall be responsible for refilling and re-testing the water storage tank.

B. The CONTRACTOR shall be charged the current rate for water consumed to perform the re-test.

3.8 BACTERIALOGICAL TESTING

A. Bacteriological (“Bact-T”) and residual chlorine testing shall be performed by the OWNER after the tank is full and prior to placing the tank into operation. In the event of failing Bact-T tests, the CONTRACTOR will be required to perform all work necessary to drain, clean and re-disinfect the tank at no additional expense to the OWNER.

B. Passing Bact-T tests are a requirement for acceptance of the WORK.

C. If the CONTRACTOR has to drain the tank in order to further clean and disinfect the tank, discharged water shall be de-chlorinated and all permits obtained prior to emptying the tank, unless otherwise permitted by the OWNER.

END OF SECTION

SECTION 33 16 21
WATER STORAGE TANK (WST) STAFF GAGE

PART 1 GENERAL

1.1 WORK INCLUDED

A. Furnish all labor, tools and equipment to provide and install a staff gage for water level measurement.

1.2 QUALITY STANDARDS

A. American Society for Testing and Materials

1. ASTM D 256 - Test Method for Determining the Pendulum Impact Resistance of Notched Specimens of Plastic
2. ASTM D 570 - Test Method for Water Absorption of Plastics
3. ASTM D 638 - Test Method for Tensile Properties of Plastics
4. ASTM D 695 - Test Method for Compressive Properties of Rigid Plastics
5. ASTM D 785 - Test Method for Rockwell Hardness of Plastics and Electrical Insulating Materials
6. ASTM D 790 - Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials
7. ASTM D 792 - Test Method for Specific Gravity (Relative Density) and Density of Plastics by Displacement

1.3 GAGE LENGTH

A. The gage shall extend from three feet above the outlet pipe elevation to the high-water level as shown in the Drawings.

B. The gage shall be marked to indicate water depth with the starting point equal to 0.00 at the outlet water level or the bottom of the operational water level as shown in the staff gage drawing. The gage shall have separate figures indicating water depth in one-foot increments.

1.4 DELIVERY, STORAGE AND HANDLING

A. Deliver materials in original, tightly sealed containers or unopened packages with the manufacturer's name, labels and product identification.

B. Materials shall be stored in a secure, dry area until installed.

1.5 SUBMITTALS

A. Submittals shall be made in accordance with SECTION 01 33 00 - SUBMITTALS.

PART 2 PRODUCTS

2.1 ACRYLIC SHEET - PHYSICAL PROPERTIES

A. The gage shall be constructed of acrylic sheet meeting the following specifications

Property	ASTM Method	Typical Value
Specific Gravity	D 792	57 PCF
Tensile Strength	D 638	10,000 psi
Elongation at rupture	D 638	4.5%
Young's Modulus	D 638	400,000 psi
Flexural Strength	D 790	17,000 psi
Compressive Strength (yield)	D 695	17,000 psi
Impact Strength	D 256	0.4 lbs. per inch of notch
Rockwell Hardness	D 785	M-93
Water Absorption	D 570	0.2
Odor		None
Taste		None

2.2 ACCEPTABLE MANUFACTURER

A. Acrylite GP by American Cyanamid or approved equal.

B. The gage materials and/or manufacturer of the gage are available from A.I.A. Plastics, Inc., 290 East 56th Avenue, Denver, Colorado 80216, and telephone 303-296-9696.

2.3 COLOR

A. The acrylic sheet shall be white.

2.4 MARKING SYSTEM

A. The depth numbers and level bars shall be marked using Tnemec Series 20 (PotaPox) 1211 (red).

2.5 STAINLESS STEEL WEDGE ANCHORS

A. Red Head by ITW Ramset or approved equal. Anchor type “SWW”, 316 stainless steel.

PART 3 EXECUTION

3.1 GENERAL

A. The acrylic sheets shall be provided in 8-foot long segments plus a partial segment to complete the gage length.

B. The acrylic sheet shall be lightly roughened with sandpaper prior to painting the gage to promote mechanical bond of the paint to the sheet. The acrylic sheet must be clean, dry, and free of oil, grease and other contaminants that will prevent bond of the paint.

C. The gage shall extend from above the wall footing elevation to six inches below the top of the wall. The starting point shall be labeled as shown in the Drawings.

D. Individual segments of the sheets shall be separated by 1/8-inch to permit thermal expansion and contraction to take place without buckling of the sheets

3.2 PLACEMENT

A. The staff gage shall be placed on the wall that permits the best view from the inlet pipeline roof opening, taking in account sunlight entering the opening.

3.3 ATTACHMENT

A. The Plexiglas board shall be mounted using stainless steel wedge anchors. The Plexiglas board shall be mounted at least two inches clear from the wall to permit washdown and cleaning behind the board. The wedge anchor embedment length, L, shall be $\leq$ 1 1/2 inches.

END OF SECTION

SECTION 33 16 22
WATER STORAGE TANK VENTS

PART 1 GENERAL

1.1 WORK INCLUDED

A. This Section of the Specifications will govern furnishing and installing of all water storage tank vents, including labor, materials, fabrication, and installation.

B. Exposed steel of the vent shall be hot-dip galvanized in accordance with ASTM A 123.

1.2 QUALITY STANDARDS

A. American Welding Society (AWS):

1. ANSI/AWS D1.1 – Structural Welding Code
2. Welding Handbook – Materials and Applications – Part 1

B. American Society for Testing and Materials (ASTM):

1. A 36 - Specification for Carbon Structural Steel
2. A 123 – Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products
3. A 478 - Specification for Chromium-Nickel Stainless and Heat-Resisting Steel Weaving and Knitting Wire
4. A 555 - Specification for General Requirements for Stainless Steel Wire and Wire Rods
5. A 780 – Practice for Damaged and uncoated Areas of Hot-dip Galvanized Coatings
6. D 6386 – Practice for Preparation of Zinc (Hot-dip Galvanized) Coated Iron and Steel Product and Hardware Surfaces for Painting
7. E 2016 - Standard Specification for Industrial Woven Wire Cloth

C. American Institute for Steel Construction (AISC):

1. Steel Construction Manual

D. Society for Protective Coatings (SSPC):

1. SP 8 – Pickling
2. SP 10 – Near White Blast Cleaning

1.3 SUBMITTALS

A. Screen product sample.

B. Manufacturer’s certification that the screen meets provisions of this Specification including:

1. Wire material
2. Mesh of opening designation
3. Nominal wire diameters
4. Type of weave

1.4 DELIVERY, STORAGE AND HANDLING

A. Handle the fabrication in a manner to avoid damaging or permanently bending the fabrication or damaging the screens. Use nylon slings to handle the vent fabrication.

B. Store the fabrication in a safe location on wood pallets and protect from damage due to any construction operations and from coming in contact with the ground.

C. Remove any dirt from the screens or vent fabrication prior to lifting and installing.

PART 2 PRODUCTS

2.1 GENERAL

A. Materials used in the work shall conform to and meet the requirements for the class of the material named.

2.2 STEEL

A. The steel used for fabricating the vent and screen frames cast into the concrete shall conform to the requirements of ASTM A 36.

B. Screen frame shall be 316L stainless steel.

2.3 COATINGS

A. The vent components fabricated from ASTM A 36 steel, such as the vent and screen fames cast into the concrete, shall be hot-dip galvanized.

2.4 STAINLESS STEEL INSECT SCREEN / MANUFACTURER

A. The screen shall conform to the requirements of ASTM E 2016 square mesh cloth.

B. Tolerances shall be in accordance with ASTM E 2016

C. The insect screen shall be 32 x 32 mesh Type 316 or 316L stainless steel.

D. The screen shall be a plain weave and fabricated from 0.010-inch diameter wire.

E. The open area shall be no less than 46.5%.

F. The screen shall be fabricated by Gerard Daniel Worldwide, 13900 Orange Avenue, Paramount, California 90723. Telephone (800) 635-8296.

PART 3 EXECUTION

3.1 GENERAL

A. Fabrication of the steel vent shall conform to the appropriate sections of the AWS and AISC Standards.

3.2 WELDING

A. All welding shall conform to the Structural Welding Code of the AWS.

B. The vent shall be fabricated using continuous prequalified fillet welds provided that they conform to the requirements of the AWS Code and the AISC Specifications.

C. All fillet welds shall have a 1/8-inch root thickness.

3.3 FABRICATION

A. Flame cutting of steel may be by hand or mechanically guided means. Surfaces shall have a maximum ANSI roughness height value of 500. Any fabricating technique, such as friction sawing, cold sawing, milling, etc., that produces such a finish may be used.

B. Members, which are to be framed to other parts of the vent, may have a variation from the detailed length not greater than 1/16-inch.

C. Completed members shall be free from twists, bends, and open joints.

D. Sharp kinks, bends in the framing, or burrs are cause for rejection of the vent assembly.

3.4 SURFACE PREPARATION

A. See ASTM D 3686

3.5 COATING

A. See ASTM A 123

3.6 SCREEN

A. Tolerances shall meet the requirements of ASTM E 2016, Tables 6, 7, 8, 9 and 10 for the applicable mesh.

B. The screen shall be free from the following defects within the tolerance limits set above.

1. Smash.
2. Broken shot.
3. Draw-over.
4. Double.

5. Slack shot.
6. Pinhole.
7. Hard shot.
8. Snick or kink.
9. Creeper.
10. Reed mark.
11. Burst.
12. Edge defect.
13. Wrinkle.
14. Debris in cloth.

C. Screen cloth that fails to meet the tolerances described in ASTM E 2016 shall be removed and replaced with acceptable screen material.

D. Care shall be exercised when installing the screen in the mounting frame and during installation to prevent damage to the screen. Any screen damaged during mounting or installation shall be replaced.

3.7 INSTALLATION

A. All wedge-style anchor bolt holes shall be drilled when the vent frame has been placed in the formed concrete opening. Re-drilling of holes or enlarging of holes is not permitted.

B. Wedge anchors shall be installed in accordance with the Manufacturer's recommended procedures.

C. The vent shall be bolted flush to the concrete pedestal. Gaps between the vent and the concrete that could permit insects into the reservoir are cause for rejection of the vent assembly.

D. Use sealant to seal the vent to the concrete pedestal. Place the sealant around the perimeter of the vent prior to bolting to the concrete pedestal.

END OF SECTION

SECTION 33 16 23
WST NATURAL RUBBER BEARING PADS

PART 1 GENERAL

1.1 WORK INCLUDED

A. Provide all labor, tools, materials and equipment to furnish and install natural rubber bearing pads..

B. The adhesive for adhering the bearing pad to the concrete is “extremely flammable” according to the manufacturer. The CONTRACTOR shall exercise caution when using the product and educate staff on the appropriate safety measures when using the product.

1.2 QUALITY STANDARD

A. American Society for Testing and Materials (ASTM)

1. ASTM D 395 - Determination of Compression Set
2. ASTM D 412 - Determination of Tensile Strength and Elongation at Break
3. ASTM D 573 - Accelerated Aging Tests
4. ASTM D 1349 - Practice for Rubber – Standard Temperatures for Testing
5. ASTM D 2240 - Determination of Hardness
6. ASTM D 4014 - Specification for Plain and Steel-Laminated Elastomeric Bearings for Bridges

B. Rubber Manufacturers Association, Inc

1. Rubber Handbook

1.3 MARKING AND CERTIFICATION

A. The Manufacturer shall certify that each bearing satisfies the requirements of the Drawings and these specifications, and supply a certified copy of material test results.

B. Each bearing shall be marked with indelible ink. The marking shall consist of the elastomer type and grade.

1.4 TESTING

A. Finished bearing pads shall be subjected to the tests described in this Section.

B. Tests shall be performed for every 500 linear feet of bearing pad. If the first test fails two additional tests for each failed test shall be taken. If one of the additional tests fails, the whole lot shall be rejected.

C. Unless otherwise called out in the Drawings testing for ozone cracking (ASTM D 1149) is not required.

D. Required Tests

1. Determination of Compression Set (ASTM D 395)
2. Determination of Tensile Strength and Elongation at Break (ASTM D 412)
3. Accelerated Aging Tests (ASTM D 573)
4. Determination of Hardness (ASTM D 2240)
5. Shear Modulus (ASTM D 4014 annex A)

1.5 SUBMITTALS

A. Shop drawings are required and shall conform to the requirements of SECTION 01 33 00.

B. The following are the minimum required submittals.

1. Bearing pad fabrication
2. Sheet products data sheets
3. Certified test results
4. Contact adhesive
5. Vulcanizing adhesive
6. Polyurethane Foam

1.6 ACCEPTABLE MANUFACTURERS

A. Scougal Rubber Corp., 885 Denmark Drive, Suite 103, McCarran, Nevada 89434, 775-284-8500. No equivalents or substitutions.

1.7 DELIVERY, STORAGE AND HANDLING

A. The bearing pad shall be delivered and kept in manufacturer’s packaging until it is ready to be placed on the footing.

B. Only that portion of the bearing that is to be placed in a wall segment shall be cut and removed from the packaging.

C. The bearing shall be stored at the work site in an enclosed area that provides protection from environmental and physical damage.

D. It shall be handled with care to prevent physical damage from occurring.

PART 2 PRODUCTS

2.1 BEARINGS GENERAL

A. Bearings shall be furnished with the dimensions, material properties, and elastomer grade as required by the Drawings and as specified in the following sections.

B. Unless otherwise shown in the Drawings, the rubber bearing pads shall be in conformance with ASTM D 2240 Type A Shore 30 Durometer rubber.

2.2 BEARINGS – PROPERTIES OF THE ELASTOMER

A. The raw elastomer shall be virgin natural rubber (polyisoprene). The elastomer compound shall meet the minimum requirements of the following table.

B. All test specimens shall be cut from the finished product and are permitted to vary from those specified in the table by the variance indicated.

C. All material tests shall be carried out at 73° F ± 4° F unless otherwise noted.

Physical Properties		*Result*
ASTM D 2240	Hardness (Shore A Durometer)	30 ± 5
ASTM D 412	Tensile Strength, psi, minimum	2250
	Ultimate Elongation, %, minimum	500
Heat Resistance		
ASTM D 573 (70 hours at 158º F)	Change in hardness	≤+ 5 pts.
	Change in Tensile Strength, %, max.	-25
	Change in ultimate elongation, %, max.	-25
Compression Set		
ASTM D 395 Method B	22 hours @ 158º F, % maximum	25
Ozone		
ASTM D 1149	25 ppm ozone in air by volume, 20% strain 100º F, ± 2º F, 48 hours mounting procedure D 518, Procedure A	No cracks

Low Temperature Brittleness	Not Required	
Shear Modulus Stiffness		
ASTM D 4014, Annex A	Shear Modulus, G, psi / ft	43.5 $\pm$ 10%

2.3 BEARING - FABRICATION

A. Pads may be molded or extruded.

B. Flash tolerance, finish, and appearance shall meet the requirements of the latest edition of the Rubber Handbook, published by the Rubber Manufacturers Association, Inc., RMA F3 and T.063 for molded bearings and F2 for extruded bearings.

2.4 BEARING - FABRICATION TOLERANCES

A. Pads shall be fabricated to the specified dimensions within the following tolerances:

1. Height: - 0, + 1/8 inch
2. Width: -0. + 1/4 inch
3. Parallelism with Opposite Face: Top and Bottom, 0.005 radians
   Sides, 0.02 Radians
4. Serrations: Height, -0, +1/8 inch
   Width, -0, +1/8 inch

2.5 VULCANIZING ADHESIVE

A. A two-part neoprene adhesive, such as PANGOFOL, or equivalent. The adhesive shall self vulcanize without heat when mixed with an activator.

2.6 BEARING PAD CONCRETE SURFACE ADHESIVE

A. Hannah Rubber Co., (800-591-3035) R-27780 (V-49980), no equivalents, available from Bowman Construction Supply.

2.7 ADHESIVE SOLVENT

A. 3M Solvent No. 2 or 3.

2.8 POLYURETHANE FOAM

A. Great Stuff Minimal Expanding polyurethane foam by Dow Chemical or equal.

PART 3 EXECUTION

3.1 PLACEMENT

A. Placement of the rubber bearing pads shall conform to the details shown on Drawings and these specifications.

B. Surface deformations in the concrete shall be ground smooth or leveled with a repair grout to the satisfaction of the ENGINEER. The concrete surface on which the pad is to be placed shall be steel floated finish to a level plane that shall not vary by more than 1/16 inch from a straight edge placed in any direction along the area. The concrete footing surface shall be smooth and clean.

C. Prior to adhering the bearing to the concrete, the concrete shall be blasted with a light sand blast, washed with a wet broom and dried. After cleaning the concrete footing shall be completely clear of all construction debris and free of curing compound, oil, grease, and other materials that will prevent a complete bonding of the bearing to the concrete

D. The CONTRACTOR shall review the bearing pad prior to placement. Any damaged sections of the pad shall not be used. Damage includes factors such as manufacturing defects, cuts, gouges, tears and abrasions.

The bearing shall be clean and free of all foreign substances including dust, oil, grease, etc. If necessary the bearing shall be washed with clean rags.

E. The ENGINEER shall review the length of bearing to be glued to the concrete prior to placement. If in the opinion of the ENGINEER the bearing pad is damaged, the CONTRACTOR shall remove and replace the damaged section.

F. Apply a uniform, generous brush coat of adhesive to both surfaces. Apply two coats to the bearing pad, allowing the first coat to become tacky prior to apply-

ing the second coat. Bond to the concrete while adhesive on both the rubber and concrete surfaces are aggressively tacky.

G. After the adhesive has cured check the bearing adhesion. If it can be pulled from the concrete, clean the concrete and bearing, re-apply adhesive to the bearing and adhere the bearing to the concrete.

H. When shown in the Drawings the bearing pads shall be placed directly adjacent to a bulb type waterstop. Gaps between the waterstop and bearing pad are unacceptable. See 3.4 below.

I. Cleanup excess adhesive from any contact with the top of the bearing pad or waterstop ribs using 3M No. 2 or 3 solvent. The CONTRACTOR shall follow the manufacturer's recommendations carefully when using the solvent including extinguishing all sources of ignition from the area.

3.2 JOINTS - GENERAL

A. Field joints for the bearing pads shall be made by cutting the pads at a 90° angle.

B. The spacing between joints shall be a minimum of 100-feet unless closer joints are permitted by the ENGINEER and the bearing shall extend no more than 10 feet beyond the wall form of a wall segment under construction, unless otherwise permitted by the ENGINEER.

3.3 VULCANIZING JOINTS

A. Field bonding of the joints shall be made with a cold, two-part vulcanizing adhesive PANGOFOL.

B. Buff the bearing end using a rough wire brush.

C. Brush off loose particles and wipe buffed surfaces with a lint-free clean cloth slightly damped with BUFSOL. Let dry.

D. Shake the can of PANGOFOL. Mix thoroughly with the activator. The mixture is useable for a period of approximately two to four hours.

E. Apply a uniform coat of PANGOFOL-activator mixture to both surfaces with a clean cement brush. Let dry.

F. Apply a second coat of PANGOFOL-activator mixture to both surfaces. Let dry until tacky.

G. Join the cemented surfaces and “stitch” them down from the center outward. Avoid trapping air between the two surfaces.

3.4 FILLING GAPS WITH POLYURETHANE FOAM

A. Fill any gaps between the bearing pad and a PVC waterstop with polyurethane foam.

B. Trim hardened foam carefully with a knife to form a level plane from the top of the PVC waterstop bulb to the top of the bearing pad.

C. Remove cut foam debris from the bottom of the wall.

3.5 OTHER WORK NEAR BEARING

A. The CONTRACTOR shall not use an open flame anywhere near the bearing pad, such as using a “weed burner” propane torch to remove foam placed as a sill plate under the wall.

B. Use of an open flame near the bearing pad at any time during construction of the structure i.e., after concrete wall placement, shall be cause for rejection of the bearing pad and the wall if, in the opinion of the ENGINEER, there was a potential for damage to the bearing pad. Rejected bearing pads shall be replaced.

END OF SECTION

SECTION 33 16 24
NEOPRENE SHEET PADS

PART 1 GENERAL

1.1 WORK INCLUDED

A. The CONTRACTOR shall furnish all materials, labor, tools and equipment for the construction and installation of neoprene sheet pads.

B. Work associated with the installation of neoprene sheet pads shall include additional finishing of the concrete for a smooth surface, such as grinding or fill of depressions in the concrete with an appropriate grout repair product.

1.2 QUALITY STANDARDS

A. American Society for Testing and Materials (ASTM)

1. ASTM D 395, Determination of Compression Set
2. ASTM D 412, Determination of Tensile Strength and Elongation at Break
3. ASTM D 573, Accelerated Aging Tests
4. ASTM D 1349, Practice for Rubber – Standard Temperatures for Testing
5. ASTM D 1418, Practice for Rubber and Rubber Latices
6. ASTM D 2240, Determination of Hardness
7. ASTM D 3183, Practice for Rubber – Preparation of Pieces for Test Purposes from Products.
8. ASTM D 4014, Specification for Plain and Steel-Laminated Elastomeric Bearings for Bridges

1.3 MARKING AND CERTIFICATION

A. The Manufacturer shall certify that each pad satisfies the requirements of the Drawings and these specifications and supply a certified copy of material test results.

B. Each pad shall be marked with indelible ink. The marking shall consist of the elastomer type and grade.

1.4 TESTING

A. Finished neoprene sheet pad shall be subjected to the tests described in this Section.

B. Tests shall be performed by an independent laboratory for every 100 linear feet of pad. If the first test fails, two additional tests for each failed test shall be taken. If one of the additional tests fails, the whole lot shall be rejected.

C. Unless otherwise called out in the Drawings testing for ozone cracking (ASTM D 1149) is not required.

D. Required Tests

1. Determination of Compression Set (ASTM D 395)
2. Determination of Tensile Strength and Elongation at Break (ASTM D 412)
3. Accelerated Aging Tests (ASTM D 573)
4. Determination of Hardness (ASTM D 2240)

E. Materials for testing shall be prepared in accordance with ASTM D 3183.

1.5 SUBMITTALS

A. Shop drawings are required and shall conform to the requirements of SECTION 01 33 00 - SUBMITTALS.

B. The following are the minimum required submittals.

1. Contact adhesive
2. Product data
3. Neoprene content
4. Joint tape
5. Pad lubricating grease.

1.6 DELIVERY, STORAGE AND HANDLING

A. The neoprene sheet shall be delivered and kept in manufacturer’s packaging until it is ready to be placed.

B. The sheet shall be stored at the work site in an enclosed area that provides protection from environmental and physical damage.

C. It shall be handled with care to prevent physical damage from occurring.

PART 2 MATERIALS

2.1 GENERAL

A. Neoprene sheet shall be furnished with the dimensions, material properties, and elastomer grade as required by the Drawings and as specified in the following sections.

B. Unless otherwise shown in the Drawings, the neoprene sheet pads shall be in conformance with ASTM D 2240, either Shore A Durometer 30 or IRHD 30.

C. The neoprene content shall be a minimum of 51%.

2.2 PROPERTIES OF THE ELASTOMER

A. The elastomer shall be a polychloroprene rubber (CR) commonly called neoprene. The elastomer compound shall meet the minimum requirements of the following table.

B. All test specimens shall be cut from the finished product and are permitted to vary from those specified in the table by the variance indicated.

C. All material tests shall be carried out at 73° F ± 4° F unless otherwise noted.

Physical Properties		*Result*
ASTM D 2240	Hardness (Shore A), minimum	30
ASTM D 412	Tensile Strength, psi, minimum	700
	Ultimate Elongation, %, minimum	450
Heat Resistance		
ASTM D 573 (70 hours at 158º F)	Change in hardness	≤ ± 5 pts.
	Change in Tensile Strength, %, max.	-25
	Change in ultimate elongation, %, max.	-25
Compression Set		
ASTM D 395 Method B	22 hours @ 212º F, % maximum	60
Ozone		
ASTM D 1149	25 pphm ozone in air by volume, 20% strain 100º F, ± 2º F, 48 hours mounting procedure D 518, Procedure A	No cracks
Low Temperature Brittleness	Not Required	
Shear Modulus Stiffness		
ASTM D 4014, Annex A	Not Required	

2.3 FABRICATION

A. Pads may be molded or extruded. The pads shall be full-width as shown in the Drawings.

B. Flash tolerance, finish, and appearance shall meet the requirements of the latest edition of the Rubber Handbook, published by the Rubber Manufacturers Association, Inc., RMA F3 and T.063 for molded bearings and F2 for extruded pads.

2.4 FABRICATION TOLERANCES

A. Pads shall be fabricated to the specified dimensions within the following tolerances:

1. Height: - 0, + 1/16 inch
2. Width: -0, + 1/4 inch

2.5 BEARING PAD CONCRETE SURFACE ADHESIVE

A. Sovereign SC-336

2.6 ADHESIVE SOLVENT

A. 3M Solvent No. 2 or 3.

2.7 ACCEPTABLE PAD MANUFACTURERS

A. Scougal Rubber Corp. 6239 Corson Way, Seattle, WA 98108 (206)764-4984 or equivalent.

2.8 PAD LUBRICATING GREASE

A. Liquid-O-Ring 151 – Food Grade Grease, no equivalents.

PART 3 EXECUTION

3.1 PLACEMENT

A. Placement of the neoprene sheet pad shall conform to the details shown on Drawings and these specifications. The pad shall be full width. No longitudinal splices are permitted.

B. Surface deformations in the concrete shall be ground smooth or leveled with a repair grout to the satisfaction of the ENGINEER. The concrete surface on which

the sheet is to be placed shall be a level plane that shall not vary by more than 1/16 inch from a straight edge placed in any direction along the area. The concrete surface shall be smooth and clean.

C. Prior to adhering the sheet to the concrete, the concrete shall be blasted with a light sand blast, washed with a wet broom and dried unless otherwise approved by the ENGINEER. After cleaning the concrete surface shall be completely clear of all construction debris and free of curing compound, oil, grease, and other materials that will prevent a complete bonding of the sheet to the concrete.

D. The neoprene sheet shall be clean and free of all foreign substances including dust, oil, grease, etc. If necessary the sheet shall be washed with clean rags.

E. The ENGINEER shall review the length of sheet to be glued to the concrete prior to placement.

F. The bottom neoprene sheet shall be glued to the concrete with a uniform application of contact cement as reviewed and accepted by the ENGINEER. The CONTRACTOR shall follow the manufacturer's recommendations for application of the contact cement. After the adhesive has cured check the sheet adhesion. If it can be pulled from the concrete, clean the concrete and neoprene sheet, re-apply adhesive to the sheet and adhere the sheet to the concrete.

G. The CONTRACTOR shall apply a uniform layer of grease to the top surface of the bottom neoprene sheet. The amount of grease used shall be the minimum required to accomplish a reduction of friction between the bottom and top neoprene sheets. The CONTRACTOR shall only grease the bottom sheets that will be covered within 30 minutes to avoid contaminating the grease with dust and construction debris. Grease left exposed for more than 30 minutes shall be removed and re-applied.

H. The CONTRACTOR shall place the top neoprene sheet upon completion of grease application on the bottom sheet.

I. All neoprene sheet joints shall be perpendicular to the long axis of the pad and radial to the center of the structure. Sheets shall be full length of an opening side unless closer joints are permitted by the ENGINEER or shown in the Drawings. Do not overlap sheets. Sheets shall be neatly trimmed to be coincidental to the top of the concrete bearing surface. The pads may extend beyond the outside face of the wall, but shall be trimmed flush with the wall after floor / roof slab concrete placement and when the slab is prestressed, after post-tensioning has been completed.

J. Tape all joints using two-inch wide duct tape or equivalent adhesive tape. Note that tape will not stick to sheet that has any grease on the surface. If tape does not stick due to manufacturing residues, lightly sand the sheet prior to taping.

K. The CONTRACTOR shall exercise care when placing chairs, bolsters and reinforcing steel on top of the pads to avoid displacement. Pads that are displaced shall be replaced

END OF SECTION

SECTION 33 16 25
MODULAR MECHANICAL PIPE SEALS

PART 1 GENERAL

1.1 WORK INCLUDED

A. The work covered under this specification includes furnishing, forming or coring the penetration and installing modular mechanical pipe seals.

B. Non-water Retaining Structures

1. All pipe penetrations through structures non-water retaining structures, such as valve vault concrete walls, shall consist of a Nitrile sleeve with weep ring.
2. Alternatively the penetration may be cored.

C. Water Retaining Structures

1. All pipe penetrations through walls, such as post-tensioned concrete water tank walls, shall be cored unless otherwise shown in the Drawings.
2. When permitted by the ENGINEER the wall penetration may be formed using Cell-Cast® Forming Disks or reviewed and accepted equal.

D. The pipe seal links shall completely seal the annular space between the pipe and sleeve to provide a completely water tight seal.

E. In water retaining structures two seals are required at each wall pipe penetration at each wall face.

F. Size the modular mechanical seal in accordance with the manufacturer's instructions for the size and material of pipes shown to provide a watertight seal between the pipe and opening.

G. The modular mechanical pipe seal shall be capable of maintaining a watertight seal at a hydrostatic head of 40 feet of water.

H. The CONTRACTOR shall check modular seal stainless steel bolt for proper tightness prior to filling a water retaining structure for watertightness testing. This work shall be performed in the presence of the ENGINEER.

1.2 SUBMITTALS

A. Manufacturer's data sheets

B. Manufacturer's installation instructions

1.3 DELIVERY, STORAGE AND HANDLING

A. See SPECIFICATION SECTION 01 66 00 - DELIVERY, STORAGE AND HANDLING

B. Prevent damage, such as cuts or tears, in the rubber sealing elements.

C. Store materials to avoid environmental damage including ozone or ultra-violet light deterioration.

1.4 TOLERANCE

A. The maximum out-of-round tolerance is ± 1/16-inch regardless of the method of construction of the penetration.

B. Sleeves shall be inspected prior to installation to verify that the tolerance is met. Sleeve that exceed the permitted tolerance shall be replaced or be braced with plywood discs to meet and maintain the acceptable tolerance

PART 2 MATERIALS

2.1 RUBBER SEALING ELEMENTS

A. The rubber-sealing element shall be manufactured from EPDM (Ethylene Propylene Diene Monomer) synthetic rubber.

2.2 PRESSURE PLATES

A. Pressure plates shall be glass-reinforced nylon plastic.

2.3 BOLTS AND NUTS

A. Bolts and nuts shall be 18 - 8 stainless steel.

2.4 PIPE SLEEVE SEALS

A. Model - O, Nitrile.

2.5 CORED PENETRATION SEALS

A. Model "S-316"

2.6 SLEEVES

A. Century-Line® Model CS Sleeves made from HDPE thermoplastic with end caps. The sleeve shall have a molded-in waterstop that acts as an expansion device to seat the end caps to the wall forms.

2.7 CELL-CAST® HOLE FORMING DISCS

A. Cell-Cast ®Forming Discs can be used in lieu of coring for holes ≥ 29.25-inch O.D. Pipe when permitted by the ENGINEER.

2.8 ACCEPTABLE MANUFACTURERS

A. Thunderline Corporation or equal.

PART 3 EXECUTION

3.1 GENERAL

A. The CONTRACTOR shall follow the manufacturer's recommended installation procedure. The CONTRACTOR is responsible for providing the appropriate size and model of wall seal for each size pipe and pipe material utilized.

B. The CONTRACTOR shall examine the seals and any sleeves to confirm that the proper model seals and sleeves have been delivered.

C. The CONTRACTOR shall examine the sleeves to make certain that the sleeve is within out-of-round tolerance limitations and free from other defects that could impair the installation of the pipe seals.

E. Sleeved penetrations shall be cleaned to remove dust and construction debris to facilitate a watertight connection.

F. Cored penetrations shall be ground to remove any surface profile that could compromise a watertight connection between the seal and concrete surface.

G. The CONTRACTOR shall follow written instructions from the manufacturer regarding the proper stainless steel bolt tightening procedures. Do not over tighten bolts.

H. Water Retaining Structure Installations

1. The CONTRACTOR shall be required to make all pipe penetrations watertight.
2. If leakage occurs the CONTRACTOR shall first check for improperly tightened modular seal bolts.
3. If leakage continues the CONRACTOR shall inject the void between the pipe seals with polyurethane chemical grout. See SPECIFICATION SECTION 03 15 11 – CHEMICAL GROUT WATERSTOP. Additional measures, such as using sealants, may be required.

END OF SECTION

SECTION 33 41 20
CLEARWELL AUTOMATIC DRAINAGE GATES

PART 1 GENERAL

1.1 WORK INCLUDED

A. Furnish all labor, materials, tools, equipment and perform all work and services necessary for the installation of automatic drainage gate as shown in the Drawings and as specified, in accordance with the provisions of the Contract Documents, and completely coordinated with the work of all other trades.

B. Although such work is not specifically shown or specified, furnish and install all supplementary or miscellaneous items, appurtenances and devices incidental to or necessary for a sound, secure and complete installation.

1.2 QUALITY STANDARDS

A. American Society for Testing and Materials

1. ASTM A 48 - Specification for Gray Iron Castings
2. ASTM A536 - Specification for Ductile Iron Castings
3. ASTM B 26 - Specification for Aluminum-Alloy Sand Castings
4. ASTM B 584 - Specification for Copper Alloy Sand Castings for General Applications

B. American Water Works Association (AWWA)

1. AWWA C207 - Steel Pipe Flanges for Waterworks Services – Sizes 4 IN. through 144 IN.

2. AWWA C111 - Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.

1.3 SUBMITTALS

A. Manufacturer's descriptive literature and recommended methods of installation.

B. Manufacturer's certification that the products meet specification.

1.4 ACCEPTABLE MANUFACTURER AND MODEL

A. The drainage gate shall be manufactured by the Neenah Foundry Company, Neenah, Wisconsin, or equivalent.

B. The size and model number are shown in the Drawings.

PART 2 PRODUCTS

2.1 GENERAL

A. Automatic drainage gate castings shall be of uniform quality, free from blowholes, shrinkage, distortion or other defects.

B. The gates shall be smooth and well cleaned by shotblasting.

2.2 MATERIALS

A. Unless otherwise shown in the Drawings, Automatic drainage gates shall be constructed of gray cast iron.

B. The arms may be constructed of either gray cast iron or ductile iron.

C. Hinge pins shall be fabricated from stainless steel.

2.3 WEDGE ANCHORS FOR ANCHORAGE TO CONCRETE

A. Wedge anchors shall be manufactured from Type 303 stainless steel.

B. The anchors shall be 3/4-inch diameter Ramset/Red Head WW-3484.

2.4 BOLTS FOR FLANGED CONNECTIONS

A. Bolts shall conform to AWWA C207, Section 4.1.

2.5 GASKETS FOR FLANGED CONNECTIONS

A. Bolts shall conform to AWWA C207, Section 4.1.

PART 3 EXECUTION

3.1 INSTALLATION FOR TYPE SF GATES ATTACHED TO CONCRETE:

A. Install each gate in a manner that will prevent leakage around the seat and binding of the gate during operation.

B. Surfaces of metal against which concrete will be placed shall be free from oil, grease, loose mill scale, loose paint, surface rust, and other debris or objectionable coatings.

C. The concrete surface against which rubber seal will bear or against which flat frame or plate is to be installed shall be finished to provide a smooth and uniform contact surface.

D. When each flat back frame is installed against the concrete, a layer of bedding mortar shall be placed between the frame and the concrete.

E. Fasten the gate frame to the concrete wall with 3/4-inch diameter stainless steel wedge anchors. The anchors shall be installed with a torque of 175 foot-pounds. The minimum anchor embedment is 3 1/4 inches.

3.2 INSTALLATION FOR TYPE FF GATES (FLANGED CONNECTIONS):

A. Joint assembly shall be as recommended by the manufacturer and in accordance with AWWA C111.

END OF SECTION

SECTION 33 46 16
PIPE UNDERDRAINS

PART 1 GENERAL

1.1 WORK INCLUDED

A. Furnish all labor, tools, and equipment and perform all work necessary for, or incidental to, the supply and installation of non-pressure drainage pipe underdrains as shown in the Drawings and specified herein. This work includes trenching, placement of any geotextile fabric, rock, HDPE pipe and clean-outs to drain water from structure foundations. The work shall be coordinated with the work of all other trades and activities on the project.

B. Although such work is not specifically shown or specified, furnish and install all supplementary and miscellaneous items, appurtenances and devices incidental to or necessary for a complete installation.

C. Pipe underdrains shall be placed in straight segments (chords) connected with bends when curvature is required, such as around circular tank foundations.

1.2 QUALITY STANDARDS

A. American Society for Testing and Materials (ASTM)

1. ASTM C 33 - Concrete Aggregates
2. ASTM D 883 - Definition of Terms Relating to Plastics
3. ASTM D 2122 - Method of Determining Dimensions of Thermoplastic Pipe and Fittings
4. ASTM D 2321 - Practice for Underground Installation of Flexible Thermoplastic Sewer Pipe
5. ASTM D 3350 - Specification for Polyethylene Plastics Pipe and Fittings Materials (minimum cell classification 324420C
6. ASTM F 405 - Standard Specifications for Corrugated Polyethylene (PE) Tubing and Fittings
7. ASTM F412 - Definitions of Terms Relating to Plastic Piping Systems
8. ASTM F 477 - Elastomeric Seals (Gaskets) for Joining Plastic Pipe

B. American Association of State Highway and Transportation Officials (AASHTO)

1. AASHTO M252 – Corrugated Polyethylene Drainage Tubing

1.3 SUBMITTALS

A. Submittals shall conform to the requirements of SECTION 01 33 01 and shall include as a minimum the following:

1. Geotextile fabric
2. Rock gradation results
3. HDPE pipe and fittings (including slot perforation pattern)
4. Meter vault sections and lid (where required for clean-outs)

1.4 ACCEPTABLE PIPE MANUFACTURER / MODEL

A. Hancor Sure-Lok® (bell and spigot) or Hi-Q (plain end) pipe meeting AASHTO M252 solid wall (Type S) and slotted wall (Type SP with AASHTO Class II perforations) pipe.

B. Pipe shown or specified with slotted perforations shall provide a minimum inlet area of 1.0 square inches per linear foot.

C. The slotted perforation pattern shall be in accordance with AASHTO M-252 and M-294 Class II perforations. Slots shall measure 7/8 inch long x 0.125-inch wide.

D. The pipe is available in 20-foot joints.

1.5 DELIVERY, STORAGE AND HANDLING

A. The pipe shall be delivered, stored and handled in accordance with the manufacturer's written instructions, a copy of which shall be made available to the ENGINEER when the products are delivered.

PART 2 PRODUCTS

2.1 GEOTEXTILE FABRIC

A. The fabric shall have complete resistance to deterioration from ambient temperatures, acid, and alkaline conditions, and shall be indestructible to microorganisms and insects. The material shall be resistant to short-term (until placement) deterioration by ultraviolet light or protected until placement, as recommended by the manufacturer, such that no deterioration occurs. During shipment and storage, the rolls of fabric shall be protected against deterioration from the sun, mud, dirt, dust, and other deleterious conditions at all times.

B. Fibers used in the manufacture of geotextiles, and the threads used in joining geotextiles by sewing, shall consist of long chain synthetic polymers composed of

PROPERTY	VALUE	TEST METHOD
Grab Strength	120 lbs.	ASTM D 4632
Grab Tensile Elongation	55%	ASTM D 4632
Burst Strength	225 psi	ASTM D 3786
Puncture Resistance	65 lbs.	ASTM D 4833
Trapezoid Tear Strength	50 lbs.	ASTM D 4533
Apparent Opening Size	70, U.S. Standard Sieve	ASTM D 4751
Permittivity	1.7 sec^{-1}	ASTM D 4491
Water Flow Rate	140 gal./min./ft^2	ASTM D 4491

at least 85% by weight polyolefins, polyesters, or polyamides. They shall be formed into a network such that the filaments or yarns retain dimensional stability relative to each other, including selvedges.

C. The property values shown below are not design values, but represent the minimum accepted physical characteristics of the geotextile required. The number represents a value to be confirmed by the manufacturer. These values represent minimum average roll values (i.e., any roll tested should meet or exceed the minimum values in the TABLE 1).

D. Geotextile fabric for pipe underdrains shall be Mirafi 140N or equivalent.

2.2 ROCK BEDDING

A. Coarse concrete aggregate meeting the requirements of ASTM C 33 No. 57 shall be used unless otherwise shown in the Drawings.

2.3 HDPE PIPE AND FITTINGS

A. HDPE pipe and fittings shall meet the same requirements. See Section 1.4 above.

2.4 METER VAULT

A. The precast concrete meter vault sections and lid shall be to the dimensions shown on the Drawings. The vault shall be furnished by Amcor or equivalent. The lid shall be blank and not be labeled “water”.

PART 3 EXECUTION

3.1 TRENCHING

A. The underdrain may be trenched into the native soil a maximum of six inches if shown on the Drawings to the grades shown on the Drawings. The trenches shall slope uniformly at the grade shown on the Drawings. The CONTRACTOR shall perform the work to avoid undermining the footing.

3.2 GEOTEXTILE FABRIC

A. Geotextile fabric shall be placed as shown in the Drawings Care shall be taken not to tear any geotextile fabric during backfilling. See SECTION 31 05 19.

3.3 ROCK

A. Rock shall be placed on the geotextile fabric to the depth shown prior to placement of the HDPE pipe. After the pipe is in place, rock shall be placed along and over the top of the pipe in a manner that will not damage the pipe.

3.4 HDPE PIPE AND FITTINGS

A. The pipe shall be installed in accordance with ASTM D 2321 and the manufacturer’s written instructions, a copy of which shall be maintained on site during pipe installation.

B. Curved alignments shall be constructed using Hi-Q or Sure-Lok pipe bends. If Sure-Lok pipe is used the bell end of the joint may be cut off and the joints of pipe connected with elbows, which in 6-inch size are spigot-by-spigot, and coupling bands. “Anaconda” style gaskets shall be used top make the joint silt tight. Similarly Hi-Q pipe shall be connected using bends and coupling bands with anaconda gaskets.

C. Pipe shall be laid straight from joint to joint.

D. Curvature less than 765 feet in radius shall be made with bends, such as 22.5-degree elbows (spigot x spigot) and coupling bands. The pipe may be deflected a maximum of 1.5 degrees of angular misalignment at the joints.

E. For tight curvatures the 20-foot Hi-Q or Sure-Lok pipe joint can be cut into shorter lengths to maintain alignment tolerance from the structure. Joints shall be connected with elbows (spigot x spigot) and coupling bands placed at each joint. Anaconda style gaskets shall be used to make the connections silt tight.

F. Soil-tight Split Coupler Bands shall be used to make connections of pipe and bends. Soil-tight Snap Couplers are unacceptable unless the manufacturer can provide documentation that the joint pullout strength of the snap coupler is equivalent to the split coupler.

3.5 CLEAN-OUTS

A. The clean-out risers shall be constructed of solid wall pipe and protected from damage during the backfilling operations.

B. The ring and cap shall be secured in place with a reinforced concrete collar as shown on the Drawings.

3.6 DEAD ENDS

A. Dead ends of pipe reaches shall be capped with end caps.

CITY OF ARVADA

REPORT TO CITY COUNCIL RESOLUTION

AGENDA ITEM 8.A.5.

TO: THE HONORABLE CITY COUNCIL DATE: June 14, 2021

SUBJECT: R21-084 A Resolution Authorizing the Issuance of a Purchase Order in the Amount of $402,586.00 to L.L. Johnson Distributing Company, Inc., for the Purchase of Turf Maintenance Equipment

Report in Brief

City Council action is requested for the approval of a purchase order to replace turf equipment for use by the Parks team. As part of the 2021 Vehicle Replacement Program, Fleet Services has identified five units in need of replacement. Fleet Services utilizes a fifteen point tracking system that is part of the FASTER fleet software system to identify equipment replacement needs. This system tracks and assesses points based on the three categories of vehicle age, mileage, and maintenance costs. An accumulation of fifteen points renders the equipment no longer cost effective to retain for service.

The Arvada team recommends that the City Council approve R21-084, A Resolution Authorizing the Issuance of a Purchase Order in the Amount of $402,586.00 to L.L. Johnson Distributing Company, Inc. for the Purchase of Turf Maintenance Equipment.

Financial Impact

These new units will be purchased in the amount of $402,586.00 as part of the 2021 Vehicle and Equipment Replacement budget. Funds are available in the New Vehicle and Equipment Acquisitions Program account number 54.731010.58207 and are a one-time cost.

The new units will also be purchased in accordance with the MAPO Contract #2017025-MAPO, which is managed by the National Intergovernmental Purchasing Alliance, adopted by the Colorado Multiple Assembly of Procurement Offices, which currently represents more than thirty public Front Range entities. This contract was competitively bid and awarded to Toro. L.L. Johnson Distributing Company, Inc. is the local distributor for Toro products.

Background

All five of the mowers identified for replacement are Toro Groundsmaster units. Two of the mowers (replacing units P494 and P500) are Groundsmaster 5900-D’s which feature a large 16' cutting width, full-time 4-wheel drive, and are powered by a Tier 4 compliant diesel engine. Additional 2-Post Extensions will be purchased with these large mowers that include a sunshade, glass windshield, and wiper kit for operator safety. Two of the mowers (replacing units P528 and P531) are Groundsmaster 7210’s that feature 72” recycler decks, heated cabs, and polar track systems. MB powered V-plows will be purchased with the 7210’s and are an important accessory for the Parks team's use during snow removal operations. The fifth mower (replacing unit P445) is a Groundsmaster 4500-D that features five 27” independent decks, power steering, bi-directional 4-wheel drive, canopy, automatic reversing fan, and an air-ride seat.

Discussion

Approval of this resolution and procurement of these units will enable the Parks team to continue to maintain City Parks at current high levels of service. In addition, the procurement of the units will enable the Fleet team to maintain the equipment in an effective manner which focuses on preventive maintenance with minimum equipment downtime.

Public Contact

Posting of the City Council agenda.

Commission Recommendation

NA

Strategic Alignment

This equipment replacement supports the City Council Strategic Plan for Vibrant Communities and Neighborhoods by helping our community and visitors enjoy our well maintained parks. This procurement also aligns with the City Council Strategic Plan for Infrastructure by obtaining safe and environmentally efficient equipment.

Alternative Courses of Action

NA

Recommendation for Action

The Arvada team recommends that the City Council approve R21-084, A Resolution Authorizing the Issuance of a Purchase Order in the Amount of $402,586.00 to L.L. Johnson Distributing Company, Inc. for the Purchase of Turf Maintenance Equipment.

Suggested Motion:

I move that R21-084, A Resolution Authorizing the Issuance of a Purchase Order in the Amount of $402,586.00 to L.L. Johnson Distributing Company, Inc. for the Purchase of Turf Maintenance Equipment, be (approved) (rejected).

CITY OF ARVADA

REPORT TO CITY COUNCIL RESOLUTION

AGENDA ITEM 8.B.1.

TO: THE HONORABLE CITY COUNCIL DATE: June 14, 2021

SUBJECT: R21-085 A Resolution Approving the Ninth and Tenth Amendments to an Employment Agreement By and Between the Arvada Urban Renewal Authority and Maureen C. Phair as Secretary and Executive Director

Report in Brief

The Intergovernmental Agreement (IGA) between AURA and the City requires that an amendment to the AURA Executive Director's contract must be approved by City Council if there is a change in compensation. On March 3, 2021, the AURA Board approved, subject to City Council approval, the Ninth Amendment to Maureen Phair's employment contract and approved a one-time lump sum bonus payment of $5,000.00. On May 5, 2021, the AURA Board approved, subject to City Council approval, the Tenth Amendment to Maureen Phair's employment contract and approved an increase from $154,560 to $159,196.80 to be retroactive to January 1, 2021.

The Arvada team recommends that the City Council approve R21-085, A Resolution Approving the Ninth and Tenth Amendments to an Employment Agreement By and Between the Arvada Urban Renewal Authority and Maureen C. Phair as Secretary and Executive Director.

Financial Impact

There is no impact of the pay adjustment to the City budget or to City revenues. AURA budgets separately from the City, and its operations, including personnel costs, are funded through TIF revenue.

Background

AURA is a separate governmental entity employing its own Executive Director. However, an Intergovernmental Agreement (IGA) provides that any change in the compensation of the AURA Executive Director is subject to approval by the City Council. The AURA Board approved adjustments to Ms. Phair's pay that takes into consideration the intervening 12 month period between her last contract amendment and the current amendment.

Discussion

The AURA Board is requesting that the City Council approve R21-085, A Resolution Approving the Ninth and Tenth Amendments to an Employment Agreement By and Between the Arvada Urban Renewal Authority and Maureen C. Phair as Secretary and Executive Director.

The amendment provides for a pay increase in annual salary from $154,560 to $159,196.80 retroactive to January 1, 2021.

Public Contact

Posting of the City Council agenda.

Commission Recommendation

N/A

Strategic Alignment

Alignment as stated in the Intergovernmental Agreement (IGA) between AURA and the City.

Alternative Courses of Action

No alternative courses of action included.

CITY OF ARVADA

REPORT TO CITY COUNCIL RESOLUTION

AGENDA ITEM 10.A.

TO: THE HONORABLE CITY COUNCIL DATE: June 14, 2021

SUBJECT: R21-086 A Resolution Setting Forth Certain Findings of Fact and Conclusions as to the Annexation of Certain Land Into the City of Arvada, Colorado, Maple Valley Park, Approximately Located at 6900 Indiana Street

Report in Brief

This resolution is in the nature of a technical, housekeeping measure, intended to insure compliance with the "Municipal Annexation Act," Section 31-12-101 et seq. Section 31-12-110 of the Act states that "upon completion of the hearing , the governing body of the annexing municipality, by resolution, shall set forth its findings of fact and its conclusions based thereon with reference to the following matters: ." Section 31-12-111 goes on to state that, after the resolution (assuming the resolution determines that the requirements of Section 31-12-104 and 31-12-105 have been met, no election is required, etc.), the governing body may thereupon annex the area by ordinance. The requirements of Sections 31-12-104 and 31-12-105, as referenced in the resolution (and as asserted in the Petition for Annexation), are technical requirements of eligibility for annexation (e.g., 1/6 contiguity, etc.). Meeting those requirements does not mandate annexation of a given property, thus, in annexation proceedings, Council has the prerogative to adopt such a resolution (finding compliance with the technical requirements of Sections 31-12-104 and 31-12-105) and then reject the companion annexation ordinance (if, for example, it finds that such annexation is not in the best interests of the City).

The Arvada team recommends that the City Council approve R21-086, A Resolution Setting Forth Certain Findings of Fact and Conclusions as to the Annexation of Certain Land Into the City of Arvada, Colorado, Maple Valley Park, Approximately Located at 6900 Indiana Street.

Please see item 10.B for project documentation.

Financial Impact

There is no financial impact associated with the proposed action.

Background

The subject property is located at approximately 6900 Indiana Street and is currently utilized and operating as a City-owned park and serves as part of the Ralston Creek Trail. The subject property is located just north of the Indiana Street and W. 68th Avenue intersection. This property was deeded from Jefferson County to the City of Arvada to be used exclusively for public open space, park and recreational purposes. If the City of Arvada, it successors or assigns, should use the property for any purpose other than public open space, park and recreational purposes, the property shall revert to Jefferson County and the deed shall be null and void.

Discussion

The subject property has been requested to be annexed into the City by the City team. The City team believes, as the property is already owned and maintained by the City of Arvada, that it is appropriate for the property to be within our jurisdictional boundaries.

Public Contact

Posting of the City Council agenda.

Commission Recommendation

N/A

Strategic Alignment

Annexing a City owned park into the jurisdictional boundaries within the City of Arvada aligns with the Vibrant Community and Neighborhoods Priority Area of the City Council Strategic Plan.

Alternative Courses of Action

RESOLUTION NO. R21-086

A RESOLUTION SETTING FORTH CERTAIN FINDINGS OF FACT AND CONCLUSIONS AS TO THE ANNEXATION OF CERTAIN LAND INTO THE CITY OF ARVADA, COLORADO, MAPLE VALLEY PARK, APPROXIMATELY LOCATED AT 6900 INDIANA STREET

WHEREAS, the City Council of Arvada, Colorado has found a petition for the annexation of the hereinafter described parcel of land to be in substantial compliance with the requirements of §31-12-107(1) C.R.S.; and

WHEREAS, the City Clerk has provided notice of public hearing on the proposed annexation by publication once per week for four successive weeks and by registered mail to the Clerk of the Board of County Commissioners, the county Attorney, the school district, and to any special district having territory in the area to be annexed; and

WHEREAS, the City Council has completed a public hearing to determine if the proposed annexation complies with Article II, Section 30 of the Colorado Constitution and §§31-12-104 and 31-12-105 C.R.S., to establish eligibility for annexation.

BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF ARVADA, COLORADO:

Section 1. The City Council of the City of Arvada, State of Colorado, having examined the filings and the Petition for Annexation for certain real property, Maple Valley Park, Arvada, Colorado, more fully described in said Petition and having held a public hearing thereon, make the following findings pursuant to Colorado State law:

1. That not less than one-sixth of the perimeter of the area proposed to be annexed is contiguous with the existing boundaries of the City; and therefore, because of such contiguity, a community interest exists between the territory proposed to be annexed and the City.

2. That the area proposed to be annexed is urban or will be urbanized in the near future.

3. That the area proposed to be annexed is integrated or is capable of being integrated in the City.

4. That no land held in identical ownership has been divided or included without written consent of the owner thereof.

5. That no annexation proceedings have been commenced by another municipality.

6. That the annexation will not result in the detachment of area from a school district.

7. That the annexation will not result in the extension of a municipal boundary more than three miles.

8. That the City has in place a plan for said three mile area.

9. That in establishing the boundaries of the area to be annexed the entire width of any street or alley is included within the area annexed.

10. That an election is not required under §31-12-107(2) C.R.S.

11. That no additional terms or conditions are imposed which require an election under §31-12-107(2) C.R.S.

Section 2. The City Council of the City of Arvada, State of Colorado, having examined the filings and the Petition for Annexation for certain real property, Maple Valley Park, Arvada, Colorado, more fully described in said Petition and having held a public hearing thereon, make the additional following findings pursuant to Arvada's Land Development Code:

1. That the annexation is in accord with the Comprehensive Plan and the best interest of the City would be served by annexation of the subject property.
2. That the subject property is capable of being integrated into the City and developed in compliance with all applicable provisions of this Code, the Arvada City Code, and the terms of an annexation agreement.
3. That at the time any development of the subject property is completed, there will be capacity to adequately serve residents of such area with all necessary utilities, facilities, and public services.

Section 3. This resolution shall be effective upon its approval by the City Council.

APPROVED AND ADOPTED this 14th day of June, 2021.

CITY OF ARVADA

REPORT TO CITY COUNCIL PUBLIC HEARING

AGENDA ITEM 10.B.

TO: THE HONORABLE CITY COUNCIL DATE: June 14, 2021

SUBJECT: CB21-016 An Ordinance Annexing Certain Land Into the City of Arvada, Maple Valley Park, Approximately Located at 6900 Indiana Street (Ordinance No. 4763)

Report in Brief

The subject property is located at approximately 6900 Indiana Street and is currently utilized and operating as a City owned park and serves as part of the Ralston Creek Trail. The subject property is located just north of the Indiana Street and W. 68th Avenue intersection. This property was deeded from Jefferson County to the City of Arvada to be used exclusively for public open space, park and recreational purposes. If the City of Arvada, it successors or assigns, should use the property for any purpose other than public open space, park and recreational purposes, the property shall revert to Jefferson County and the deed shall be null and void.

The Planning Commission voted 6 to 0 (1 absent) in favor to recommend approval to City Council during the public hearing on April 20, 2021.

The Arvada team recommends that CB21-016, An Ordinance Annexing Certain Land Into the City of Arvada, Maple Valley Park, Approximately Located at 6900 Indiana Street, be approved on final reading, numbered 4763 and ordered published by title only.

Financial Impact

There will be no financial impact.

Background

The subject property is located at approximately 6900 Indiana Street and is currently utilized and operating as a City- owned park and serves as part of the Ralston Creek Trail. The subject property is located just north of the Indiana Street and W. 68th Avenue intersection. This property was deeded from Jefferson County to the City of Arvada to be used exclusively for public open space, park and recreational purposes. If the City of Arvada, its successors or assigns, should use the property for any purpose other than public open space, park and recreational purposes, the property shall revert to Jefferson County and the deed shall be null and void.

Discussion

Scannell Properties for the City of Arvada is requesting approval of an annexation and rezoning application for Maple Valley Park. The annexation consists of approximately 12.33 acres of which 12 acres is Maple Valley Park and the remaining .39 acres is right-of-way for Indiana Street. The property is zoned Jefferson County A-2 (Agricultural) and the requested rezoning is OS (Open Space). The following information summarizes the Community and Economic Development team's analysis of the proposed annexation:

Div. 8-3-3 Annexation and Disconnection Approval Criteria	**Finding**	**Rationale**
1. The annexation is in accord with the Comprehensive Plan and the best interests of the City would be served by annexation of such property.	Complies	The property is included within the Arvada Comprehensive Plan and the City has the ability to service it. The City currently owns the property and it is in the best interest of the City to have it within the jurisdictional boundary of Arvada.
2. The property is capable of being integrated into the City and developed in compliance with all applicable provisions of this Code and the Arvada City Code.	Complies	The property is a City-owned and maintained park and is used by Arvada residents and visitors.
3. At the time any development of the area proposed to be annexed is completed, there will be capacity to adequately serve residents of such area with all necessary utilities, facilities and public services.	Complies	The City has capacity to serve these two lots. No development is proposed.

Div. 8-3-4 Zoning and Rezoning Approval Criteria	**Finding**	**Rationale**
1. The rezoning is consistent with the Arvada Comprehensive Plan, or an adopted sub-area plan, corridor plan, or urban renewal plan, or reflects conditions that have changed since the adoption of the Comprehensive Plan.	Complies	The rezoning request to OS is consistent with the Comprehensive Plan and intent of the Open Space and Parks designation in the Land Use Plan.
2. The intended land use is consistent with the stated intent of the proposed zoning district.	Complies	The use of the property as park and open space is consistent with the OS zoning district.
3. Facilities and services (including sewage and waste disposal, water, gas, electricity, police and fire protection, and roads and transportation, as applicable) will, prior to development, be available to serve the subject property while maintaining adequate levels of service to existing development.	Complies	Facilities and services necessary to serve the property are available.
4. The intended land use for which the rezoning is sought will not result in significant adverse impacts upon the natural environment, including air, water, noise, stormwater management, wildlife, and vegetation, or such impacts will be substantially mitigated.	Complies	The intended land use (park and open space) will not have any significant adverse impacts.
5. The rezoning is consistent with the character of existing or planned development on adjacent properties and in the surrounding area or neighborhood, or measures will be taken to substantially buffer or otherwise substantially mitigate any negative impacts.	Complies	The rezoning request is consistent with the character of the existing neighborhood and surrounding area.

Public Contact

The required neighborhood meeting for this project took place on November 18, 2020. Due to the COVID-19 pandemic, a virtual neighborhood meeting was held. The applicant and Arvada team members were in attendance as well as 35 neighbors.

A second virtual neighborhood meeting was held on March 11, 2021. Approximately 300 residents were in attendance at the meeting.

Written notice was sent 15 days prior to the meeting, a published notice was posted in the newspaper 15 days prior to the meeting, and a public hearing sign was posted 15 days prior to the meeting.

Commission Recommendation

The Planning Commission voted 6 to 0 (1 absent) to recommend approval to the City Council.

Strategic Alignment

This proposed action aligns with the Community and Economic Development and Vibrant Community and Neighborhoods Priority Areas within the City Council Strategic Plan.

Alternative Courses of Action

NA

Recommendation for Action

The Arvada team recommends that Council approve CB21-016, An Ordinance Annexing Certain Land Into the City of Arvada, Maple Valley Park, Approximately Located at 6900 Indiana Street.

Suggested Motion:

I move that CB21-016, An Ordinance Annexing Certain Land Into the City of Arvada, Maple Valley Park, Approximately Located at 6900 Indiana Street, be (approved on final reading, numbered 4763 and ordered published by title only) (rejected).

COUNCIL BILL NO. 21-016
ORDINANCE NO. 4763

AN ORDINANCE ANNEXING CERTAIN LAND INTO THE CITY OF ARVADA, MAPLE VALLEY PARK, APPROXIMATELY LOCATED AT 6900 INDIANA STREET

BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF ARVADA, COLORADO:

Section 1. The City Council of the City of Arvada, State of Colorado, having examined the filings and the annexation map for certain real property more fully described in said map finds as follows:

1. That a petition for annexation, together with four copies of the annexation map as required by law, was filed with the City by the owners of over fifty percent of the area of the territory hereinafter described, exclusive of public streets and alleys, and comprising more than fifty percent of the landowners of the property to be annexed.

2. That the City, by resolution at a properly noticed meeting accepted said petition and found and determined that the applicable parts of the Municipal Annexation Act of 1965, as amended, and Section 30 of Article II of the Colorado Constitution have been met and further determined that an election was not required under the Act and that no additional terms and conditions were imposed upon said annexation.

3. That the area proposed to be annexed meets the applicable requirements of Sections 31-12-104 and 31-12-105, C.R.S., and is therefore eligible for annexation to the City of Arvada.

Section 2. The following described real property, situated in the County of Jefferson, State of Colorado, be and the same hereby is annexed to the City of Arvada, to wit:

A PARCEL OF LAND LOCATED IN:

THE WEST ONE-HALF OF SECTION 6, TOWNSHIP 3 SOUTH, RANGE 69 WEST, OF THE 6TH PRINCIPAL MERIDIAN, JEFFERSON COUNTY, STATE OF COLORADO.

More particularly described in attached Exhibit A

Section 3. The Mayor is hereby authorized to execute, the City Clerk to attest, in form approved by the City Attorney, an Annexation Agreement pertaining to the property owned by the Petitioners.

Section 4. The Clerk of the City shall perform all statutory duties to complete said annexation.

Section 5. This Ordinance shall be effective five days after publication following final passage.

INTRODUCED, READ, AND ORDERED PUBLISHED this 17th day of May. 2021.

PASSED, ADOPTED, AND APPROVED this 14th day of June, 2021.

TO: THE CITY OF ARVADA, COLORADO.

RE: PETITION FOR ANNEXATION

DATE: October 22, 2020

The undersigned landowner (the "**Petitioner**"), in accordance with the Municipal Annexation Act of 1965 as set forth in Article 12, Title 31, Colorado Revised Statutes (the "**Act**"), as amended and as in effect on the submission date set forth below, hereby petitions the City Council of the City of Arvada for annexation to the City of Arvada (the "**City**") of Maple Valley Park, in the County of Jefferson and State of Colorado (the "**Property**"), the Property being more particularly described by its legal description in "Exhibit A" which is attached hereto and incorporated herein by reference.

In support of this petition for annexation (the "**Petition**"), Petitioner further alleges to the City Council of the City that:

1. It is desirable and necessary that the area described above be annexed to the City.

2. The requirements of C.R.S. §§ 31-12-104 and 31-12-105, as amended, exist or have been met in that:

   a) Not less than one-sixth of the perimeter of the area proposed to be annexed is contiguous with the City or will be contiguous with the City within such time as required by C.R.S. § 31-12-104.

   b) A community of interest exists between the area proposed to be annexed and the City.

   c) The area proposed to be annexed is urban or will be urbanized in the near future.

   d) The area proposed to be annexed is integrated with or is capable of being integrated with the City.

   e) No land within the boundary of the area proposed to be annexed which is held in identical ownership, whether consisting of one (1) tract or parcel of real estate or two (2) or more contiguous tracts or parcels of real estate, has been divided into separate parts or parcels without the written consent of the landowner or landowners thereof, unless such tracts or parcels were separated by a dedicated street, road or other public way.

   f) No land within the boundary of the area proposed to be annexed which is held in identical ownership, comprises twenty (20) acres or more, and which, together with the buildings and improvements situated thereon has an assessed value in excess of two hundred thousand dollars and 00/100 ($200,000.00) for ad valorem tax purposes for the year next preceding the annexation, has been included within the area proposed to be annexed without the written consent of the landowner or landowners.

   g) The Property is not presently a part of any incorporated city, city and county, or the City; nor have any proceedings been commenced for

incorporation or annexation in an area that is part or all of the Property; nor has any election for annexation of the Property or substantially the same area to the City been held within the twelve (12) months immediately preceding the filing of this Petition.

h) The annexation of the area proposed to be annexed will not result in the detachment of area from any school district or attachment of same to another school district.

i) Except to the extent necessary to avoid dividing parcels within the Property held in identical ownership, at least fifty percent (50%) of which are within the three (3)-mile limit, the proposed annexation will not extend the municipal boundary of the City more than three (3) miles in any direction from any point of the current municipal boundary in any one (1) year.

j) Prior to completion of the annexation of the area proposed to be annexed, the City will have in place a plan for such area, which generally describes the proposed: location, character, and extent of streets, subways, bridges, waterways, waterfronts, parkways, playgrounds, squares, parks, aviation fields, other public ways, grounds, open spaces, public utilities, and terminals for water, light, sanitation, transportation, and power to be provided by the City; and the proposed land uses for the area; such plan to be updated at least once annually.

k) In establishing the boundary of the area proposed to be annexed, if a portion of a platted street or alley is to be annexed, the entire width of the street or alley has been included within the area to be annexed.

l) The City will not deny reasonable access to any landowners, owners of any easement, or the owners of any franchise adjoining any platted street or alley which is to be annexed to the City but is not bounded on both sides by the City.

3. Petitioner comprises more than fifty percent (50%) of the landowners in the Property owning more than fifty percent (50%) of the Property, excluding public streets, alleys and any land owned by the annexing municipality, and the Petitioner hereby consents to the establishment of the boundaries of the Property as shown in the annexation map submitted herewith. The legal description of the land owned by the Petitioner is set forth "Exhibit A" attached hereto and incorporated herein by reference.

4. Accompanying this Petition are four (4) copies of an annexation map containing the following information:

a) A written legal description of the boundaries of the area proposed to be annexed;

b) A map showing the boundary or the area proposed to be annexed, said map prepared and containing the seal of a registered engineer;

c) Within the annexation boundary maps, a showing of the location of each

ownership tract in unplatted land and, if part or all of the area is platted, the boundaries and the plat numbers of plots or of lots and blocks;

d) Next to the boundary of the area proposed to be annexed, a drawing of the contiguous boundary of the City and the contiguous boundary of any other municipality abutting the area proposed to be annexed, and a showing of the dimensions of such contiguous boundaries.

5. The affidavit of the circulator of this Petition certifying that the signature on this Petition is the signature of each person whose name it purports to be certifying the accuracy of the date of such signatures is attached hereto as "Exhibit B" and is incorporated herein by this reference.

6. The proposed annexation of the Property complies with § 30(1)(b) of Article II of the Colorado Constitution.

7. Upon the annexation ordinance becoming effective, the Property proposed to be annexed will become subject to all ordinances, rules and regulations of the City, except for general property taxes of the City which shall become effective as the January 1 next ensuing following the adoption of the annexation ordinance.

8. This Petition is conditioned upon the approval of Open Space zoning classification for the entire Property and approval by the Petitioner of an annexation agreement for the Property that is acceptable to the Petitioner and the City.

WHEREFORE, the following Petitioner respectfully requests that the City, acting through its City Council, approve the annexation of the Property pursuant to the provisions of the Act.

GENERAL NOTES

1. NOTICE: ACCORDING TO COLORADO LAW YOU MUST COMMENCE ANY LEGAL ACTION BASED UPON ANY DEFECT IN THIS SURVEY WITHIN THREE YEARS AFTER YOU DISCOVER SUCH DEFECT. IN NO EVENT MAY LEGAL ACTION BASED UPON ANY DEFECT IN THIS SURVEY BE COMMENCED MORE THAN TEN YEARS FROM THE DATE CERTIFICATION SHOWN HEREON.

2. THIS SURVEY DOES NOT CONSTITUTE A TITLE SEARCH BY WILSON AND COMPANY TO DETERMINE TITLE OR EASEMENTS OF RECORD. RESEARCH FOR THIS SURVEY WAS PERFORMED IN ACCORDANCE WITH CRS 38-51-106 AND THE RULES OF PROCEDURE AND BOARD POLICY STATEMENTS OF THE STATE BOARD OF LICENSURE FOR PROFESSIONAL ENGINEERS AND PROFESSIONAL LAND SURVEYORS, SPECIFICALLY THOSE BOARD RULES AND POLICY STATEMENTS RELATING TO THE DEPICTION OF EASEMENTS AND RIGHTS OF WAY ON SUBDIVISION PLATS. NO TITLE COMMITMENTS WAS PROVIDED FOR THIS PROPERTY.

3. BASIS OF BEARINGS: BEARINGS USED HEREIN ARE BASED ON THE EAST-WEST CENTERLINE OF THE WEST HALF OF SECTION 6, TOWNSHIP 3 SOUTH, RANGE 69 WEST, OF THE 6TH P.M., BEING N88°58'53"E USING THE COLORADO STATE PLANE COORDINATES – CENTRAL ZONE, AS MONUMENTED ON THE WEST BY A FOUND ILLEGIBLE 2.0" ALUMINUM CAP, ACCEPTED AS THE WEST 1/4 CORNER OF SECTION 6,PER MONUMENT RECORD BY PLS 12405 DATED 8/16/00, AND AS MONUMENTED ON THE EAST BY A FOUND 2.5" ALUMINUM CAP PLS 5112, ACCEPTED AS THE CENTER CORNER OF SECTION 6, PER MONUMENT RECORD BY PLS 5112, DATED 6/11/97.

SURVEYOR'S CERTIFICATE:

I, DOUGLAS H. ORT III, A PROFESSIONAL LAND SURVEYOR IN THE STATE OF COLORADO, ON THE BASIS OF MY KNOWLEDGE, INFORMATION AND BELIEF, DO HEREBY CERTIFY THAT IN JUNE 2020, A ANNEXATION MAP WAS MADE UNDER MY SUPERVISION, IN ACCORDANCE WITH THE STANDARD OF CARE FOR THE STATE OF COLORADO, AND THAT THIS ANNEXATION MAP AND ALL NOTES SHOWN HEREON IS AN ACCURATE REPRESENTATION OF THE PROPERTY AS DETERMINED BY THIS SURVEY, ENCROACHMENTS, EASEMENTS, RIGHTS OF WAY OR PASSAGEWAYS ACROSS SAID PROPERTY THAT ARE IN EVIDENCE OR KNOWN TO ME, ARE AS SHOWN TO THE BEST OF MY KNOWLEDGE, INFORMATION AND BELIEF. THIS SURVEY, AND THE INFORMATION SHOWN HEREON ARE NOT A GUARANTY OR WARRANTY, EITHER EXPRESSED OR IMPLIED.

THE ABOVE DESCRIBED LAND IS CONTIGUOUS TO THE CITY OF ARVADA AND MEETS THE REQUIREMENTS SET FORTH IN COLORADO REVISED STATUTES 1973, 31-12-104-(1)(A) THAT ONE-SIXTH OR MORE OF THE PERIMETER TO BE ANNEXED IS CONTIGUOUS WITH THE ANNEXING MUNICIPALITY.

CONTIGUITY STATEMENT:

- TOTAL PERIMETER OF AREA CONSIDERED FOR ANNEXATION=4222.59'
- ONE-SIXTH OF TOTAL PERIMETER OF AREA=703.76'
- PERIMETER OF THE AREA CONTIGUOUS WITH EXISTING CITY LIMITS=2093.19'
- THE TOTAL CONTIGUOUS PERIMETER IS 49.6%, WHICH EXCEEDS THE 1/6 AREA REQUIRED

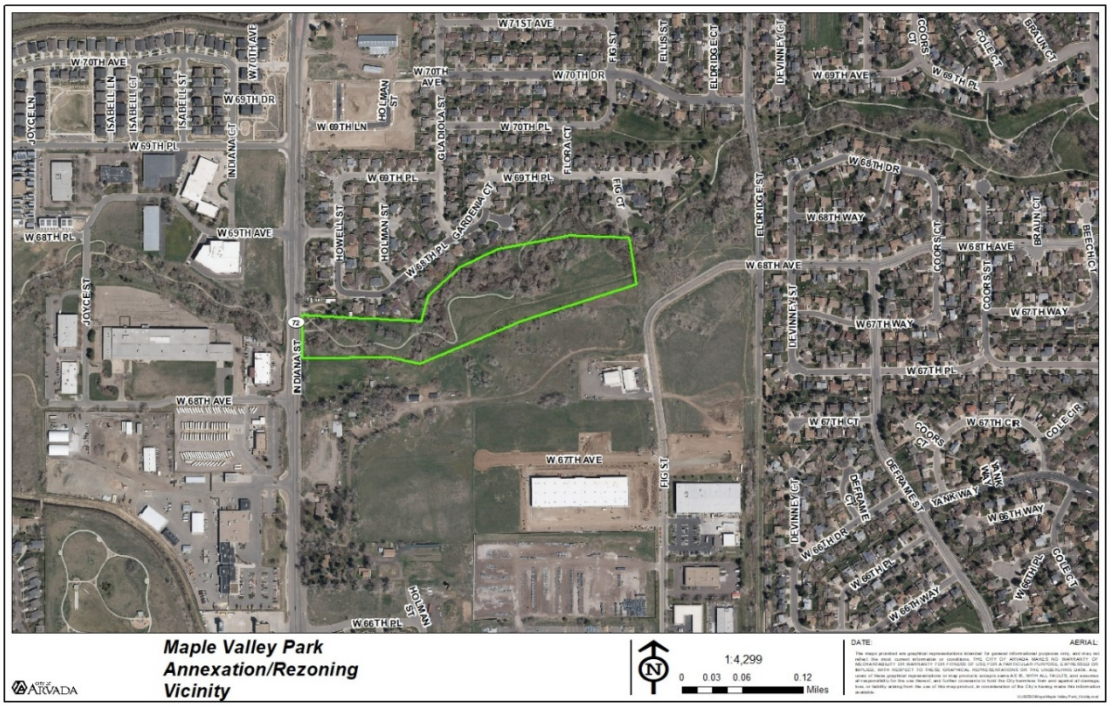
MAPLE VALLEY ANNEXATION TO THE CITY OF ARVADA

COUNTY OF JEFFERSON
STATE OF COLORADO

M:\2020\20-300\20-300_Documents\surveys\Drawings\20-300.mxd Arvada Annexation Maps.dwg, Plotted on: Jan 12, 2021 - 2:58pm, By: jbarker

City of Arvada
Community and Economic Development Department
PUBLIC HEARING STAFF REPORT



Maple Valley Park Annexation
Annexation/Rezoning
DA2020-0118

NATURE OF REQUEST

Scannell Properties for the City of Arvada is requesting approval of an annexation and rezoning application for Maple Valley Park. The annexation consists of approximately 12.33 acres of which 12 acres is Maple Valley Park and the remaining .39 acres is right-of-way for Indiana Street. The property is zoned Jefferson County A-2 (Agricultural) and the requested rezoning is OS (Open Space).

LOCATION AND HISTORY

The subject property is located at approximately 6900 Indiana Street and is currently utilized and operating as a City owned park and serves as part of the Ralston Creek Trail. The subject property is located just north of the Indiana Street and W. 68th Avenue intersection. This property was deeded from Jefferson County to the City of Arvada to be used exclusively for public open space, park and recreational purposes. If the City of Arvada, it successors or assigns, should use the property for any purpose other than public open space, park and recreational purposes, the property shall revert to Jefferson County and the deed shall be null and void.

NEIGHBORHOOD MEETING

Division 8-2-2 of the Land Development Code requires that at least one neighborhood meeting be held for projects that require public hearings before the Planning Commission and City Council.

The required neighborhood meeting for this project took place on November 18th, 2020 in conjunction Project Indiana (DA2020-0117). Due to the COVID-19 pandemic, a virtual neighborhood meeting was held. The applicant and staff were in attendance as well as 35 neighbors. Questions regarding plans for the park and ensuring that the park would not be developed on were discussed. Concerns regarding potential negative impacts to the park from the development of the Project Indiana site were also raised.

A second virtual neighborhood meeting was held on March 11th, 2021 also in conjunction with Project Indiana to address additional neighbor concerns that arose during the review cycle.

Approximately 300 residents were in attendance at the meeting. The applicant along with the eventual end user of the building for Project Indiana, Amazon, gave a presentation regarding that project. This neighborhood meeting included a discussion regarding the annexation and rezoning for Maple Valley Park and clarification to the public that no development would happen on the park site.

Several representatives from the Protect Maple Valley Park Committee were then allowed to present their concerns. Various issues related to protecting the park from development, ensuring that native animal species that live in the park are protected, and preserving and

enhancing the park for active uses for nearby residents were presented. The Committee also discussed the findings of the Maple Valley Park Ecological Assessment which was completed by the Colorado Natural Heritage Program and the Warner College of Natural Resources and is attached in the packet.

Attendees were able to submit questions and expressed concerns related to the planned land-use of the site, the Comprehensive Plan, zoning, and the development review process. Other questions and concerns related to drainage, stormwater, and the Ralston Creek floodplain were also discussed.

The applicant prepared a summary of the meetings, which is attached.

PUBLIC NOTIFICATION

Division 8-2-4 of the Land Development Code requires public notification for all public hearings as follows:

Written Notice: At least 15 days prior to all public hearings, written notice must be mailed to all property owners within 500 feet of the subject property and to all homeowners associations and neighborhood associations with a known interest in the subject property. The applicant will provide an affidavit of mailing verifying this requirement has been met prior to the public hearing.

Posted Notice: At least 15 days prior to all public hearings, signs notifying the public of the hearing must be posted on the subject property. The applicant will provide a posting log verifying that this requirement has been met prior to the public hearing.

Published Notice: At least 15 days prior to all public hearings, notice of the hearing must be published in a newspaper of general circulation in the City. The required notice has been published.

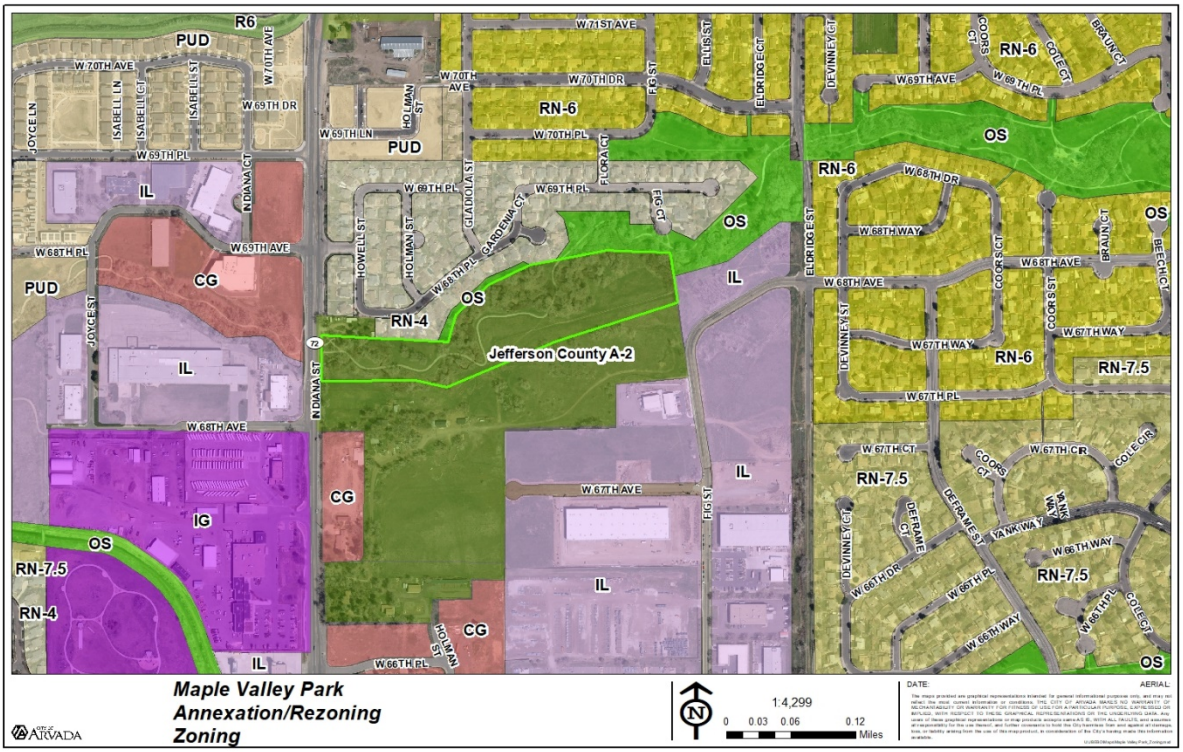
SEVERED MINERAL RIGHTS

At least 30 days prior to the public hearing, written notice of the application must be mailed to any owner of mineral rights associated with the subject property. The applicant has provided the required Certification of Notice pursuant to Colorado Revised Statute 24-65.5-103.

DEVELOPMENT REVIEW TIMELINE

The application was accepted by the City for review on October 26, 2020. The standard review timeline allows for three reviews within a 20 week timeframe to reach a Planning Commission public hearing. This application required three reviews. Because an optional second neighborhood meeting was held prior to the Planning Commission hearing, the case is being heard over 25 weeks from the acceptance of the application.

ALIGNMENT WITH CITY COUNCIL STRATEGIC PLAN



This project aligns with the Community and Economic Development strategic goals.

ZONING AND LAND USE

The subject property is currently zoned Jefferson County A-2 and is approximately 12.33 acres in size.

Surrounding properties are zoned and utilized as follows:

Direction	Zoning	Actual Use
North	RN-4 (Residential Neighborhood) OS (Open Space) Jefferson County A-2	Single-Family Neighborhood Portion of Annex Maple Valley Park Single-Family Home
South	Jefferson County A-2	Single-Family Home/Agricultural
East	IL (Industrial, Light) OS	Undeveloped Land Shadow Mountain Park/Ralston Creek Trail
West (across Indiana St.)	IL	Manufacturing/Warehouse/Distribution

The applicant is requesting to rezone the property to OS (Open Space). The intent of the OS zoning district is to provide for public parks, open space, nature preserves, recreation facilities, golf courses, greenbelts, cemeteries, waterways, trails, protected floodplains, and fields.

PROJECT ANALYSIS

Annexation

The City desires to annex the park into the City in order to retain complete jurisdictional control over the property. Currently the park is owned by the City, however, Jefferson County maintains zoning and other regulatory controls because it is in unincorporated Jefferson County.

Annexation into the City requires conformance with the contiguity requirements in Colorado Revised Statues §31-12-101 which requires at least one-sixth of the property perimeter to be contiguous with the City of Arvada. The northern and western property boundaries share a boundary with the City of Arvada and meets this requirement.

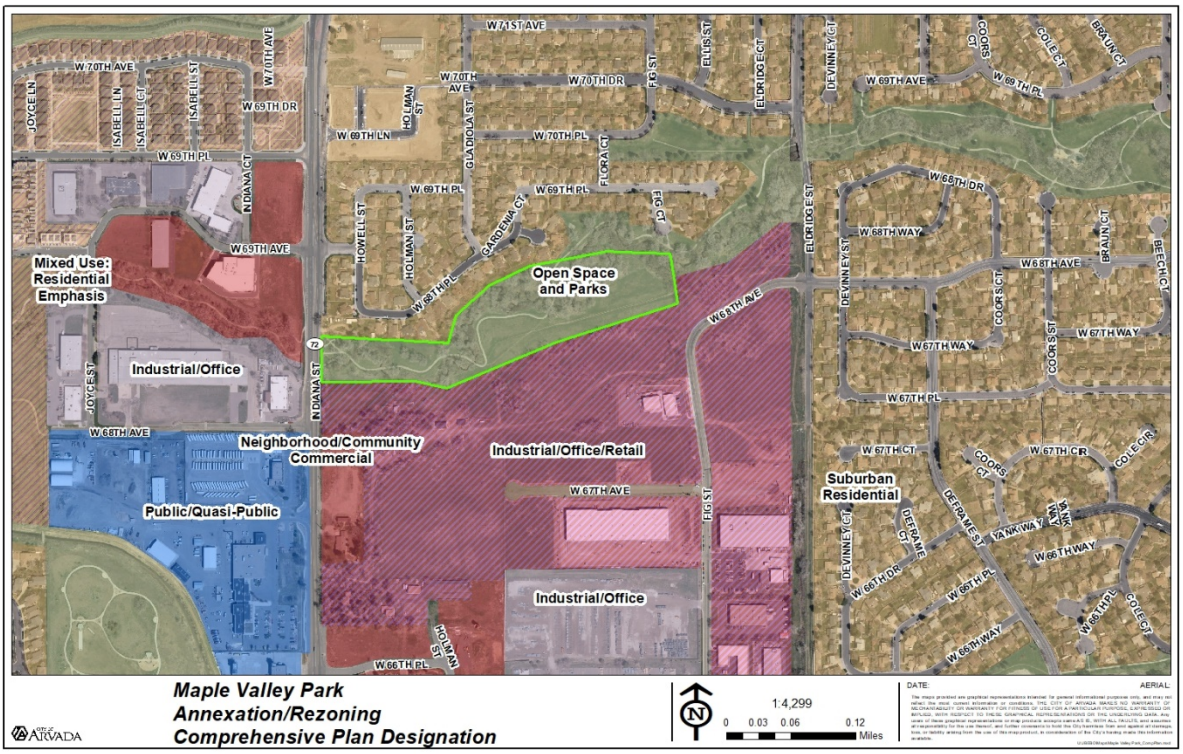
Compliance with the Comprehensive Plan

The property is shown on the Comprehensive Plan Land Use map as Open Space and Parks. The Land Use Plan designates these areas in the city for use as public and private open space, public and private parks, outdoor sport complexes, and golf courses.

The following goals and policies within the plan are supported by this application:

Goal L-2**:** Plan for a balanced mix of commercial and residential land uses in Arvada.

> Policy L-2.2: Allow Appropriate Expansion of City Boundaries
> The City will consider the annexation of land that includes land uses that are consistent with the Comprehensive Plan goals, the long-term needs of the community and the City's service capacity.



Goal CC-3**:** Identify places and assets that are unique and important to the community and work to preserve them.

> Policy CC-3.3: Transitions for Stable Rural Development
> The City will preserve the integrity and character of stable rural development by requiring new developments to comply with the following principles:
>
> - Place open space, trails, riparian and wildlife corridors, view corridors, wetlands, or landscaped buffers between developments
> - Incorporate rural design elements in new developments (e.g., fencing, lighting, natural landscaping that are consistent);
> - Use major arterials or collector streets as boundaries between development; and
> - Use physical landscape features, existing vegetation as transitions.

Goal P-3: Conserve and maintain important open space lands in and around Arvada to help define the character of the community.

The application addresses these policies by incorporating land within an enclave into the city and zoning it to the OS zoning district which most appropriately implements the intent of the Open Space and Parks designation of the Comprehensive Plan. The OS zoning district will

apply the most regulatory protection out of all of the zone districts and will help to ensure that the park is preserved and protected from development in the future. The park, in its current location, acts as a transitional boundary between existing single-family neighborhoods and industrial/commercial sites to the south and offers Arvada residents and visitors outdoor and recreational opportunities.

Compliance with Other Applicable Plans

Parks, Trails, and Open Space Master Plan:

Maple Valley Park is identified in the plan as a Neighborhood Park within the various park typologies. Neighborhood parks are defined as: a park intended to provide recreation and leisure opportunities within walking distance of the individual neighborhoods they are intended to serve. Should serve as a common area for neighbors of all ages to gather, socialize, and play. Typically includes multipurpose areas for court games, multipurpose playfield, play equipment, accessible trails, and shaded areas for gathering. In most cases, programmed sports should be limited to practices.

The plan identifies the Ralston Creek trail as a regional trail. Identified as the most continuous trail in Arvada, the trail follows the Ralston Creek from its confluence with Clear Creek near Sheridan Boulevard and meandering west to State Highway 93.

The proposal is supported by the plan and rezoning the park to OS which will allow the City to continue to preserve this neighborhood park and regional trail. No gaps exist within the trail network at this location and as such no improvements are proposed.

Parks, Wildlife, and Open Space
Ralston Creek Trail has been serving nearby communities and linking several other City parks and open spaces adjacent to the trail. Via the Ralston Creek Trail, Maple Valley Park is linked to numerous other parks and open space, including Shadow Mountain Park, Ralston Valley Park, Gibbs West Community Park, Ralston Creek Trail & Open Space, Danny Kendricks Park, Davis Lane Park, Ralston Cove Park, Ralston Central Park, Hoskinson Park, Memorial Park, and terminating at Gold Strike Park, at the confluence of Clear Creek and Ralston Creek. Maple Valley Park is linked to the west to additional City amenities, including West Woods Golf Course, Birds Nest Disc Golf Course, and Long Lake Regional Park as it terminates into Arvada Blunn Reservoir.

Along with the diversity and breadth of uses within those parks and open spaces identified prior, there exists a diversity of flora and fauna that the City is committed to protecting, in alignment with our commitment to expanding and improving existing parks. City open space, trails, and parks are influenced by the development patterns of both suburban and urban growth, and the Maple Valley Park neighborhood is an area identified in Arvada's Parks, Open Space and Trails Master Plan as an area that may need additional access to neighborhood parks. As has been identified, there is an opportunity for the adjacent community and the City to establish a collaborative vision for Maple Valley Park that accounts for existing amenities, in parallel to providing ecosystem services aligned with stormwater treatment, streambank restoration, and recreational uses such as natural play.

Circulation and Connectivity
No vehicular connectivity is present nor is it proposed to be built. The Ralston Creek Trail meanders from west to east along the Ralston Creek and provides through connectivity for walkers, bikers, and runners.

Grading and Drainage
No changes to grading or drainage are currently proposed.

The City is working with Mile High Flood District (MHFD, previously Urban Drainage and Flood Control District) on the design of stream improvements within Maple Valley Park. The project is called the Ralston Creek Channel Stabilization project and it extends from Eldridge Street to Indiana Street. The City plans to begin constructing this project in the Fall of 2022 (if funding is available).

Ralston Creek's channel is severely incised and bank erosion is evident throughout this reach. At some locations, the creek has been threatening to undermine the adjacent trail. Small maintenance projects have been conducted to help protect those areas but a more robust stabilization effort is necessary to improve the stream and protect the trail system. The proposed improvements will consist of channel grading that provides bank stabilization and channel invert control, vegetation/tree management, and bioengineering erosion protection. This project will help restore a healthy stream corridor and protect the outdoor amenity of Maple Valley Park and Arvada's amazing trail system

Parking and Loading
No parking is provided on the park and none is proposed.

Police and Fire Protection
Arvada Police and Fire are able to serve the property.

LAND DEVELOPMENT CODE APPROVAL CRITERIA

It is the responsibility of the applicant to justify the requested land use application. The Planning Commission should make a recommendation to the City Council based on its findings regarding the approval criteria shown in the table(s) below and upon testimony heard during the public hearing as it applied to the criteria.

Staff performed an analysis of the proposal, based on the approval criteria listed in Section 3 of the Land Development Code, and presents the following findings:

Div. 8-3-3 Annexation and Disconnection Approval Criteria	Finding	Rationale
1. The annexation is in accord with the Comprehensive Plan and the best interests of the City would be served by annexation of such property.	Complies	The property is included within the Arvada Comprehensive Plan and the City has the ability to service it. The City currently owns the property and it is in the best interest of the City to have it within the jurisdictional boundary of Arvada.
2. The property is capable of being integrated into the City and developed in compliance with all applicable provisions of this Code and the Arvada City Code.	Complies	The property is a City-owned and maintained park and is used by Arvada residents and visitors.
3. At the time any development of the area proposed to be annexed is completed, there will be capacity to adequately serve residents of such area with all necessary utilities, facilities and public services.	Complies	The City has capacity to serve these two lots. No development is proposed.

Div. 8-3-4 Zoning and Rezoning Approval Criteria	Finding	Rationale
1. The rezoning is consistent with the Arvada Comprehensive Plan, or an adopted sub-area plan, corridor plan, or urban renewal plan, or reflects conditions that have changed since the adoption of the Comprehensive Plan.	Complies	The rezoning request to OS is consistent with the Comprehensive Plan and intent of the Open Space and Parks designation in the Land Use Plan.
2. The intended land use is consistent with the stated intent of the proposed zoning district.	Complies	The use of the property as park and open space is consistent with the OS zoning district.

3. Facilities and services (including sewage and waste disposal, water, gas, electricity, police and fire protection, and roads and transportation, as applicable) will, prior to development, be available to serve the subject property while maintaining adequate levels of service to existing development.	Complies	Facilities and services necessary to serve the property are available.
4. The intended land use for which the rezoning is sought will not result in significant adverse impacts upon the natural environment, including air, water, noise, stormwater management, wildlife, and vegetation, or such impacts will be substantially mitigated.	Complies	The intended land use (park and open space) will not have any significant adverse impacts.
5. The rezoning is consistent with the character of existing or planned development on adjacent properties and in the surrounding area or neighborhood, or measures will be taken to substantially buffer or otherwise substantially mitigate any negative impacts.	Complies	The rezoning request is consistent with the character of the existing neighborhood and surrounding area.

STAFF RECOMMENDATION

Based upon project analysis and review of the Land Development Code approval criteria, staff recommends approval of the project.

The Planning Commission may recommend denial of the request(s) if it cannot make affirmative findings of the approval criteria stated above.

Neighborhood Meeting Summary

Meeting #1: November 18, 2020

Kimley»Horn

MEMORANDUM

To: Jeremiah Bebo, City of Arvada

From: Stephen Litsas, PE

Kimley-Horn and Associates, Inc.

Date: November 18, 2020

Subject: Project Indiana Annexation – Neighborhood Meeting Summary

---

A neighborhood meeting was held on November 18, 2020 at 6 pm, to discuss the annexation submission with the public. This annexation meeting included two annexations within the same discussion: DA2020-0117 (Project Indiana) and DA2020-0118 (Maple Valley Park). Due to the on-going COVID situation, this meeting was held via Microsoft Teams. Members of the public were provided a link to log in prior to the meeting and were able to ask questions via the platform. No known technical issues were reported by any of the attendees.

A link to the full recording of the meeting can be found here:
https://web.microsoftstream.com/video/786024da-00fd-406d-8967-ac2d0b5c5da9

The meeting first discussed the annexation process for both the Project Site and the Park. It then followed into a high-level proposal of the future site development submission. It was noted that this application was not for the site development; however, to be transparent to the public of the intended annexation this was discussed. The site development discussion included a conceptual site layout, conceptual building elevations, traffic management, and high-level discussions of how the facility would operate.

The following issues were raised by the public:

1. Public: The timing of the extension of Eldridge St.
    a. City Response: The extension of Eldridge St will occur as future properties along Eldridge St develop.
    b. Follow-Up: This annexation has no impact on that. No further follow-up was required for this as part of this application.
2. Public: Questions related to traffic, including volume and timing.
    a. Applicant Response: It was clarified that a majority of van traffic would be directed towards Indiana St, with most entering Indiana St at 68th Ave and most trucks entering Indiana St at 66th Ave. It was discussed that the facility operates 24 hours a day, with truck traffic occurring during the nighttime, and van traffic happening during the daytime.

   b. Follow-Up: This response was accepted by the members of the public, and the traffic pattern could not otherwise be altered.
3. Public: Concerns with the parking lot being too bright for residences or impacting wildlife in the Park.
   a. Applicant Response: The lighting level in the parking lot is designed to a "safe level" using the City's standard, not as a bright as a standard retail parking lot. In addition, the site will use cutoff lenses that allow light to be controlled to only fall on the site.
   b. Follow-Up: The Applicant will provide a photometric analysis as part of the Site Plan application that shows lighting levels do not spill onto the neighboring residential properties.
4. Public: Concerns that the floodplain for Ralston Creek will be negatively impacted.
   a. Applicant Response: The site is intentionally staying out of the floodplain, and there will be no impacts to the floodplain.
   b. Follow-Up: This response was considered adequate by the questioner, and no follow-up is required.
5. Public: Concerns on wildlife impacts, and if there have been studies done on the wildlife in the park. Including the noise as it impacts the wildlife.
   a. Applicant Response: An environment due diligence was undertaken for the site, including a critical species, and it came back with no concerns. In terms of noise, the building was put as far south as possible on the site, and the trucks were concentrated in the existing industrial parts of the site. The parking lot adjacent to the Park operates like a standard parking lot, and the noise should be minimal.
   b. Follow-Up: The environmental study was submitted as part of the annexation and is public. No further follow-up required by the applicant as part of the annexation.
6. Public: Concerns on the amount of parking:
   a. Applicant Response: It is for the function of the facility, to park the fleet of vans.
   b. Follow-Up: This amount of parking is critical for the operation of the facility, and cannot be altered.
7. Public: Concerns with stormwater drainage / runoff negatively impacting Maple Valley Park
   a. Applicant Response: The facility will include detention and stormwater quality treatment measures in accordance with City of Arvada standards. This will clean pollutants out of the water prior to it discharging to Maple Valley Park.
   b. Follow-Up: This was accepted by the questioner.

PROPOSED ANNEXATION

Annexation Criteria

Annexation: Approval Criteria

1. Consistent with Comprehensive Plan and best interests of the City;
2. Capable of being integrated into the City and developed in compliance with applicable Code;
3. Capacity to adequately serve residents of such area with utilities, facilities, and public services.

Thank you!

CITY OF ARVADA

Exhibit B
Public Comment sent to Planning Commission for Maple Valley Park Annexation and Rezone

PROTECT MAPLE VALLEY PARK

Petition Status (As of 3/29/21)

PROJECT OPPOSITION

- Online Petition = 948 Household Responses Representing:
  - 1973 Adults (18+)
  - 710 Children
- Hard Copy Petition (Wet signatures)
  - 1671 Adults
- Petitions will be active and ongoing until the City Council Public Hearing
  - Updates planned monthly

As of 3/29/21, A Total of 3,580* Adult Residents Oppose Project Indiana 24/7 Amazon Distribution Center

*Overlap for those who signed both hard copy and online were subtracted from this total number of adults

PROTECT MAPLE VALLEY PARK

Additional Survey Data (As of 3/29/21)

ALTERNATE VISION RESPONSES

- Petitioners support a less invasive, mixed use development with **town square/village concept**
  - Online Petition Responses = 778 Households Representing:
    - 1606 Adults
    - 601 Children
  - Hard Copy Petition Signatures
    - 510 Adults
- Petitioners support **expanding Maple Valley Park** into the proposed area*
  - Online Petition Responses = 923 Households Representing:
    - 1916 Adults
    - 693 Children

Citizens Support Other Land Uses Including Alternative Development

*This question was only posed in the online survey, not on the hard copy petition

Max Wolyam park age 11 1/2

Dear city counciler Please no AMZON! the person who runs it is just sitting on so much money $ or maybe gold. also I love the park and animals; if you ruin the park to build AMZON it will mess up the ecosytem. So say no! No to amzon.

Max!

age 11 1/2.

We, the undersigned, are in **SUPPORT of a "Town Square Village Concept"** for future development of the collective properties located at 6700 Indiana Street, 6702 Indiana Street, 6710 Indiana Street and 6720 Indiana Street. We support a development that would expand the Maple Valley Park open space as described in the Arvada Parks, Open Space and Trails 2016 Master Plan and create a 2nd cultural arts district as described in the Arvada Arts and Cultural 2018 Master Plan. We encourage the City of Arvada to follow their master plans and act responsibly when planning future development adjacent to the Maple Valley Park and Ralston Creek Trail. Arvada's 2017 Comp Plan Goal R-1 states: "Minimize the impact of new development on natural areas to allow continued cohabitation of people and wildlife." We envision a community-minded development that reflects the character of the area, protects the adjacent open space, encourages a mixed use of green space, smaller businesses and retail, supports arts and culture and is a walkable village with an environment-friendly design.

We, the undersigned, are in **SUPPORT of a "Town Square Village Concept"** for future development of the collective properties located at 6700 Indiana Street, 6702 Indiana Street, 6710 Indiana Street and 6720 Indiana Street. We support a development that would expand the Maple Valley Park open space as described in the Arvada Parks, Open Space and Trails 2016 Master Plan and create a 2nd cultural arts district as described in the Arvada Arts and Cultural 2018 Master Plan. We encourage the City of Arvada to follow their master plans and act responsibly when planning future development adjacent to the Maple Valley Park and Ralston Creek Trail. Arvada's 2017 Comp Plan Goal R-1 states: "Minimize the impact of new development on natural areas to allow continued cohabitation of people and wildlife." We envision a community-minded development that reflects the character of the area, protects the adjacent open space, encourages a mixed use of green space, smaller businesses and retail, supports arts and culture and is a walkable village with an environment-friendly design.

Introduction and Methodology

Maple Valley Park is an open space property owned by the City of Arvada, located in unincorporated Jefferson County, Colorado between Indiana Street and N. Eldridge Street, south of the Maple Valley neighborhood off of W. 72nd Ave (Figure 1). The 12-acre park is one of several green spaces along Ralston Creek and adjacent Ralston Creek Trail. According to the cover letter to the City of Arvada for the application for annexation, dated 12/11/2020, this property and 24.9 acres of adjacent land to the south are being proposed for annexation into the City of Arvada. The park would be zoned "Open Space" and the adjacent private land zoned "Light Industrial". Development of the 24-acre private property has been proposed to include a 100,894 square foot warehouse, a 116,275 square foot detention area, 402 associated parking spaces, 60 van staging parking space, 60 van loading spaces, 983 van parking spaces, and 12 trailer parking spaces. The facility is proposed to operate around the clock.

Figure 1. Map of Maple Valley Park.

On January 29, 2021, two ecologists from the Colorado Natural Heritage Program, Sarah Marshall and Jessica Smith, visited the park to conduct an ecological assessment and document the biodiversity observed. Components of the Ecological Integrity Assessment for Colorado Wetlands (Lemly et al. 2016) were used to evaluate the park and establish baseline conditions. This method has been developed by the Colorado Natural Heritage Program and combines quantitative vegetation metrics with qualitative metrics such as landscape context and hydrology to assess overall wetland condition, with an emphasis on biological integrity. On this site visit, a complete survey of the park was made. A plant species list of all plants encountered and an opportunistic list of wildlife observations was recorded, as well as metrics on landscape context and stressors. These factors were included in the Ecological Assessment for this site. Maple Valley Park results are compared to results from similar riparian wetlands in the CNHP Wetland Plots Database in the text below. CNHP has been conducting wetland and riparian surveys across the state since the early 1990s.

Prior to field work, a desktop review was conducted of nearby conservation elements in the CNHP-maintained statewide database of rare elements, the Biodiversity Tracking and Conservation System (BIOTICS) (CNHP 2020). Additionally, CNHP biologist Andrea Schuhmann reviewed data layers available from Colorado Parks & Wildlife and citizen science observations of birds, downloaded from eBird, a site maintained by the Cornell Lab of Ornithology. Results from eBird are included in the text below.

Field Observations and Results

Weather was partly cloudy on the day of our visit, beginning around 35 °F and warming throughout the day. Recent snow from several days prior had mostly melted by the time of our visit. Staff began the site walk-through around 8:30am. People were walking and biking along the Ralston Creek Trail through the riparian area during our entire field visit. Despite abundant human use, we observed a variety of songbirds and raptors throughout the day (see Appendix A).

Ralston Creek was flowing during our visit, with at least one deeper pool and many riffles. The creek channel is relatively sinuous, with near-vertical, eroded banks and bank armoring (large riprap and boulders) along some outer bends of the channel in the downstream half of park. We observed evidence of sediment dredging around bridges across the creek, with neighbors noting that some sediment/debris removal happened after the entire park flooded in 2013. The channel is concrete-lined at the uppermost end of park, where Ralston Creek flows under Indiana St. Upstream, Ralston Creek passes through several reservoirs (including Ralston and Blunn), and is influenced by roads, residential and commercial development, a golf course, and several canals. The creek channel is likely more incised (downcut) compared to its historical state, due to changes in its annual flow regime from upstream irrigation, flow releases from reservoirs, and more rapid runoff from paved surfaces. The altered flow regime of the creek is likely contributing to a lack of new cottonwood recruitment and establishment, channel bank and bed erosion, and reduced wetland area along the creek channel.

Ecological Systems and Plant Community

Maple Valley Park and Ralston Creek support a remnant Rocky Mountain Lower Montane-Foothill Riparian Woodland and Shrubland system, including patches of seasonally flooded Palustrine Forested wetlands along the creek channel and in several side channels. Prior to development of surrounding and upstream areas in the Ralston Creek drainage, the site would have likely been part of a contiguous riparian corridor from the Ralston Creek headwaters to the Ralston Creek-Clear Creek confluence further into the plains.

Observed riparian vegetation was dominated by a mature stand of large, tall plains cottonwood trees. The subcanopy consisted of box elder, with both non-native crack willow and native peach-leaved willow noted. Vines were common, especially native grape, some hops and clematis (presumably the native), and wild cucumber. Little to no regeneration of cottonwoods was noted. The shrub layer consisted of hawthorn thickets, sometimes dense and impenetrable, and patches of snowberry with some wild rose. Coyote willow was common on the west side of the park.

The graminoid understory consisted of non-native **s**mooth brome, which was common in the riparian area, along with areas of reed canary grass, orchard grass and some intermediate wheatgrass. Invasive species in the riparian area included smooth brome and some patches of everlasting sweet pea. Noxious weeds included an occasional Russian olive (Noxious List B), scattered Canada thistle (Noxious List B)

with one large patch of Canada thistle on edge of riparian area (13S 486345E 4408008N), an occurrence of bouncing bet (List B) (13S 486061E 4407855 N), and knapweed (13S 485956 E 4407851N) and cut-leaf teasel (List B). See Appendix B for the full plant species list.

High quality native forbs and shrubs were observed, including false Solomon's seal (C = 7), false indigo (C = 7), red osier dogwood (C = 7), Rocky Mountain maple (C = 7), golden currant (C = 6), and Canada goldenrod (C = 5). The C-value is a value between 0 -10 assigned to most plant species in Colorado by a panel of botanical experts, with 10 being assigned to a plant which is an obligate to areas with no human impact and 1 being assigned to a native plant which can tolerate highly disturbed areas. Non-native plants are assigned a C-value of zero (Rocchio 2007). The C value can be used to calculate a Floristic Quality Index (FQI), by taking the Mean C and multiplying by the square root of the number of plant species. The FQI value can be calculated using all species observed or including native species alone (FQI of Natives). These statistics allow comparisons between wetlands of a similar ecological type and facilitate conclusions on site quality.

Overall, the total number of species (richness), percentage of native species, and mean C-value observed at Maple Valley Park were comparable to, but slightly higher than average and median values for plots in ten nearby riparian/wetland sites, including other city and county open spaces, in a similar landscape context (foothills-plains transition in the Upper South Platte and St. Vrain watersheds) (Table 1, Table 2; CNHP 2021). In 2015, CNHP completed a wetlands assessment of 40 wetlands in the City and County of Denver (Smith and Kuhn 2015). Of these wetlands, 15 were located in a floodplain or riparian area associated with a stream channel (i.e., Hydrogeomorphic Class (HGM): Riverine) and were forested, classified as a Western Great Plains Riparian Ecological System. Comparisons between these wetlands and Maple Valley Park should be made cautiously, as the ecological system differ; however, they are riparian wetlands in a similar urbanized context. Average and median plant species richness and percent of native species of these 15 wetlands were similar to Maple Valley Park, but Maple Valley Park had values higher than the average and median values for the Mean C and FQI metrics of these wetlands (Table 3).

Given the timing of the site visit, it is likely that we missed a number of native, and non-native plant species, particularly more delicate, and early blooming wildflower species lacking identifiable parts in winter.

Table 1. Plant statistics derived from observations on January 29, 2021 at Maple Valley Park. See Appendix B for full plant species list and the text for an explanation of the terms of "C" and "FQI".

Total # of Plant Species (Species Richness)	76
Number of Natives:	43
Number of Non-native	27
Number of Unknown Nativity or Cryptogenic	6
Number of Noxious List A Species	0
Number of Noxious List B Species	4
Number of Noxious List C Species	2
Number of Noxious Watch List Species	1
% Native Species	56.6

MEAN C:	2.41
MEAN C of Natives:	4.21
FQI	21.0
FQI of Natives	27.6

Table 2. Plant statistics of 10 nearby, comparable CNHP riparian plots in the CNHP Plots Database in comparison to Maple Valley Park. See text for a definition of "Mean C".

	Average	Median	Maple Valley
Species Richness	62.3	60.5	76
Mean C	2.08	2.15	2.41
% Native Species	49.9	49.5	56.6

Table 3. Plant statistics of 15 Riverine wetlands in the City and County of Denver in comparison to Maple Valley Park. See text for a definition of "Mean C" and FQI.

	Size (Acres)	Species Richness	% Native Species	Mean C	FQI
Average	8.7	81.5	56.0	1.73	14.7
Median	6.2	85	52	1.68	14.8
Maple Valley	12	76	56.6	2.41	21.0

Wildlife Habitat

Resources to support wildlife were noted throughout our visit to Maple Valley Park. Several patches of common milkweed, a species supporting monarch butterfly larvae, were noted. Wild hops, which support one of Colorado's most threatened butterflies, the hops feeding azure (*Celastrina humulus*, a globally imperiled species), were also observed (13S 485903E 4407873N and 13S 485937E 4407887N). Barnyard grass (*Echinochloa crus-galli*), a non-native species used by ducks as a food source, was observed, as well as deer rubbings on young trees. Impenetrable hawthorn thickets provide wildlife cover, and very large, old cottonwoods provide high quality wildlife habitat in form of cavities, blown-out branches, snags and downed wood. We observed numerous songbirds using the woody riparian habitats during our field visit. A seep on south side of creek with duckweed (13S 486391E 4407990N) provides potential for amphibian use. The neighbors reported sightings of racoons (scat observed by staff) and bobcats (scat of larger mammal observed by staff in area reported), a Great Horned Owl nest on east side (numerous large cavities observed), honeybees in cottonwoods, and muskrat.

Ecological Integrity

Overall ecological integrity of the Maple Valley Park riparian area was evaluated using CNHP's Ecological Integrity Assessment (EIA) metrics. Since the EIA is applied across a gradient from Colorado's most pristine to most impacted ecosystems, it is important to compare sites to similar ecological systems with comparable land use/management, and geography. The overall EIA score for the assessed area within the park was 2.19 (a C+ letter grade) out of a possible score of 10 (Appendix C). Compared to riparian

areas and riverine wetlands assessed as part of the City and County of Denver wetland study (Smith and Kuhn 2015), Maple Valley Park ranked higher than both the mean and median scores (1.9 and 1.8, respectively), though the Denver study included sites in more heavily urbanized areas further into the plains.

The park's riparian area ranked highest in terms of vegetation composition and structure (B-), including the presence of snags and fallen logs that provide habitat within the riparian area, and physiochemistry (B-; including soil condition, and visible indicators of water quality such as turbidity and algal growth). For an urban site, the park ranked reasonably well in terms of overall size relative to other riparian areas (C+), and overall condition (C+). The park's lowest rank was for landscape context (D), given a lack of contiguous natural land cover in a 500m buffer surrounding the riparian area and a low Land Use Index (2.17) due to fragmented habitat from abundant urban development, roads, lawns, disturbed fallow land, and moderate recreation in the surrounding area.

The EIA is a semi-quantitative assessment, and it is hard to fully predict how surrounding land use changes propagate through adjacent ecosystems. Still, addition of additional impervious surfaces within the 500m buffer of the park, including associated stormwater runoff and ground disturbance, would reduce the quality of the site's buffer (by removing a portion of the site's remaining natural cover buffer) and introduce additional stormwater runoff from paved surfaces. These land use changes would likely result in a lower EIA score.

Summary of Ecological Conditions and Management Recommendations

Although the riparian area at Maple Valley Park is impacted by urbanization, including modified hydrology and an influx of non-native species, this open space performs critical functions in the urban environment for wildlife habitat, water quality, and recreation. The ecosystem services and conservation values provided by riparian areas are disproportionate to their size across western U.S. landscapes. Riparian habitat supports up to 80% of known vertebrate wildlife species in the arid and semi-arid western U.S. (Chaney et al. 1990).

Threshold distances or buffers around urban green spaces to minimize adverse impacts of urban development on wildlife are, to our knowledge, not defined for this region. Nonetheless, studies have shown that certain birds (e.g., neotropical migrants, riparian bird species) decline in diversity and abundance as levels of adjacent urban development increase (Friesen et al. 1995; Miller et al. 2003). Miller et al. (2003) recommend that in the absence of site-specific buffer recommendations for riparian habitat on the Colorado Front Range, buffering areas based on the historical floodplain is a good starting point. As recommended in the report on urban wetlands of the City and County of Denver (Smith and Kuhn 2015), protecting surrounding lands by limiting development and impervious surfaces will improve the functionality of wetland and riparian resources. A buffer for the riparian area is important for the protection of this park in light of proposed adjacent development, including consideration of the hydrologic and chemical impacts of potential increased paved surfaces and nonpoint source pollutant runoff associated with vehicles and urban/commercial development (e.g., metals and hydrocarbons from vehicles, trash, sediment, and nutrients from fertilizers).

Ralston Creek within Maple Valley park has been channelized and has a modified stream flow regime, reducing the connection of the floodplain to the creek and precluding the establishment of juvenile cottonwoods. Existing, mature cottonwoods are effectively aging in place, and not being replaced when

they die. In the absence of new cottonwood recruitment over time, the riparian tree canopy will likely transition to lower-stature native trees such as boxelder. One option may be to plant (and irrigate during establishment) young cottonwoods to aid in the long-term succession of the forest at this site.

In addition to the tree canopy, there are opportunities to increase the diversity of native understory species and remove non-native plant species, including noxious weeds such as Russian olive. A native understory community would benefit from reducing dirt bike trails, social trails, and other concentrated soil and vegetation disturbance—particularly in the eastern portion of the park. Any spot treatment of non-native species should take care to avoid impacting intact native vegetation, with a preference for mechanical and cultural treatment methods over herbicides when possible. Only species native to this area of the Front Range, and locally sourced, should be included in a restoration plan. CNHP has guidance on their website for obtaining native plant materials, planting, and monitoring (https://cnhp.colostate.edu/cwic/work/restoration/#ObtainingColorado).

General Wildlife Habitat Stewardship and Ecological Recommendations:

1. Following a human safety and risk assessment, retain dead, dying, and declining trees. Prioritize trees with observed cavities and/or cavity-nesting activity for protection/retention. Large diameter trees, dead trees, and those with broken crowns typify the type of tree most likely to be used by cavity-nesting birds and other wildlife. Dead, dying, and declining tree availability is critical for cavity nesting birds common to Maple Valley Park: Great Horned Owl, Eastern Screech Owl, White-breasted Nuthatch, and Black-capped Chickadee, among others; and for cavity excavating birds: Northern Flicker, Hairy Woodpecker, and Downy Woodpecker.
2. Promote cottonwood regeneration and recruitment in the riparian area. A multi-aged forested community provides greater structural diversity and thereby habitat diversity for foraging and sheltering wildlife.
3. Nest boxes can be used to improve nesting opportunities for cavity-nesting birds if there is a significant decline in available tree cavities due to a large weather event or other reasons. Predator guards (e.g., baffles, entrance hold extenders, etc.) should always be used in conjunction with any installed nest boxes.
4. Maintain and enhance native vegetation at all structural levels: herbaceous understory, shrub midstory, and tree canopy/overstory.
5. Mitigate and minimize sources of anthropogenic noise. There is a growing body of research linking anthropogenic noise to interference in how animals behave and communicate, particularly animals like birds that rely on vocal communication.
6. Mitigate and minimize sources of anthropogenic light, especially artificial light at night (ALAN). Anthropogenic light has been linked to catastrophic insect declines (Owens et al. 2020), and impacts to a wide variety of other wildlife species. See International Dark-Sky Association website for more information on outdoor lighting recommendations.
7. Minimize future additions of impervious surface and other development within the buffer surrounding the riparian area, and increase native species cover where possible (including adjacent areas dominated by non-native grasses).
8. Consider closing, and revegetating dirt bike tracks and other social trails within the riparian area, in order to reduce bare ground and pathways for non-native plant species introduction.

Appendix A: Wildlife Species Observations

Table 4. Bird species observed at Maple Valley Park on January 29, 2021 by CNHP staff.

American Crow
American Tree Sparrow
Black-billed Magpie
Black-capped Chickadee
Blue Jay
Canada Goose
Dark-eyed Junco
Downy Woodpecker
Eurasian Collared-Dove
House Finch
Mallard
Merlin
Northern Flicker
Red-breasted Nuthatch
Sharp-shinned Hawk
Spotted Towhee
White-breasted Nuthatch
Wilson's Snipe

Table 5. List of bird species observed by citizen scientists at Maple Valley Park and recorded on eBird, accessed January 2021.

Common Name	Scientific Name
Hairy Woodpecker	*Dryobates villosus*
Northern Flicker	*Colaptes auratus*
American Kestrel	*Falco sparverius*
Black-billed Magpie	*Pica hudsonia*
American Crow	*Corvus brachyrhynchos*
Black-capped Chickadee	*Poecile atricapillus*
Mountain Chickadee	*Poecile gambeli*
White-breasted Nuthatch	*Sitta carolinensis*
Brown Creeper	*Certhia americana*
House Finch	*Haemorhous mexicanus*
Dark-eyed Junco	*Junco hyemalis*
Song Sparrow	*Melospiza melodia*
Mallard	*Anas platyrhynchos*
Downy Woodpecker	*Dryobates pubescens*
Blue Jay	*Cyanocitta cristata*
Common Raven	*Corvus corax*
Red-breasted Nuthatch	*Sitta canadensis*
Winter Wren	*Troglodytes hiemalis*

Townsend's Solitaire	*Myadestes townsendi*
Cackling Goose	*Branta hutchinsii*
Canada Goose	*Branta canadensis*
Hooded Merganser	*Lophodytes cucullatus*
Eurasian Collared-Dove	*Streptopelia decaocto*
Mourning Dove	*Zenaida macroura*
Red-tailed Hawk	*Buteo jamaicensis*
Belted Kingfisher	*Megaceryle alcyon*
Bushtit	*Psaltriparus minimus*
European Starling	*Sturnus vulgaris*
American Robin	*Turdus migratorius*
Bald Eagle	*Haliaeetus leucocephalus*
Ferruginous Hawk	*Buteo regalis*
House Sparrow	*Passer domesticus*
American Goldfinch	*Spinus tristis*
Cackling/Canada Goose	*Branta hutchinsii/canadensis*
Gadwall	*Mareca strepera*
Ring-necked Duck	*Aythya collaris*
Common Merganser	*Mergus merganser*
Ring-billed Gull	*Larus delawarensis*
Ruby-crowned Kinglet	*Regulus calendula*
Great Horned Owl	*Bubo virginianus*
Spotted Towhee	*Pipilo maculatus*
Eastern Screech-Owl	*Megascops asio*
White-crowned Sparrow	*Zonotrichia leucophrys*
Yellow-rumped Warbler	*Setophaga coronata*
warbler sp. (Parulidae sp.)	*Parulidae sp.*
Turkey Vulture	*Cathartes aura*
Cooper's Hawk	*Accipiter cooperii*
Western Wood-Pewee	*Contopus sordidulus*
House Wren	*Troglodytes aedon*
Broad-tailed Hummingbird	*Selasphorus platycercus*
Bullock's Oriole	*Icterus bullockii*
Common Grackle	*Quiscalus quiscula*
Black-and-white Warbler	*Mniotilta varia*
Yellow Warbler	*Setophaga petechia*
Western Tanager	*Piranga ludoviciana*
Rose-breasted Grosbeak	*Pheucticus ludovicianus*
Western Bluebird	*Sialia mexicana*
Great Blue Heron	*Ardea herodias*
Red-winged Blackbird	*Agelaius phoeniceus*

Sharp-shinned Hawk	*Accipiter striatus*
Mountain Bluebird	*Sialia currucoides*
Rock Pigeon	*Columba livia*
Wilson's Snipe	*Gallinago delicata*
Pine Siskin	*Spinus pinus*
Lesser Goldfinch	*Spinus psaltria*
Golden-crowned Kinglet	*Regulus satrapa*
Hermit Thrush	*Catharus guttatus*
Chipping Sparrow	*Spizella passerina*
Wilson's Warbler	*Cardellina pusilla*
Double-crested Cormorant	*Phalacrocorax auritus*
Black-crowned Night-Heron	*Nycticorax nycticorax*
Say's Phoebe	*Sayornis saya*
Red-headed Woodpecker	*Melanerpes erythrocephalus*
Tree Swallow	*Tachycineta bicolor*
Barn Swallow	*Hirundo rustica*
Western Meadowlark	*Sturnella neglecta*
Brown-headed Cowbird	*Molothrus ater*
Snowy Egret	*Egretta thula*
Cedar Waxwing	*Bombycilla cedrorum*
Orange-crowned Warbler	*Leiothlypis celata*
Eastern Bluebird	*Sialia sialis*
Lesser Scaup	*Aythya affinis*
Swamp Sparrow	*Melospiza georgiana*
American Dipper	*Cinclus mexicanus*
Snow Goose	*Anser caerulescens*
sparrow sp.	*Passerellidae sp. (sparrow sp.)*
bluebird sp.	*Sialia sp.*
passerine sp.	*Passeriformes sp.*
Green-tailed Towhee	*Pipilo chlorurus*
Cordilleran Flycatcher	*Empidonax occidentalis*
Harris's Sparrow	*Zonotrichia querula*
Killdeer	*Charadrius vociferus*
Wood Duck	*Aix sponsa*
Blue-winged Teal	*Spatula discors*
Cinnamon Teal	*Spatula cyanoptera*
Northern Shoveler	*Spatula clypeata*
Green-winged Teal	*Anas crecca*
Sharp-shinned/Cooper's Hawk	*Accipiter striatus/cooperii*
Western Kingbird	*Tyrannus verticalis*
Violet-green Swallow	*Tachycineta thalassina*

Cliff Swallow	*Petrochelidon pyrrhonota*
Swainson's Thrush	*Catharus ustulatus*
Swainson's Hawk	*Buteo swainsoni*

Appendix B: Plant Species Observations

Table 6. Plant species observed at Maple Valley Park on January 29, 2021.

Family	Scientific Name	Common Name	C-value	Nativity Status	Noxious Status
Apiaceae	*Berula erecta*	cutleaf waterparsnip	5	Native	
Apiaceae	*Conium maculatum*	poison hemlock	0	Non-native	List C
Apocynaceae	*Apocynum cannabinum*	Indian hemp	2	Native	
Apocynaceae	*Asclepias speciosa*	showy milkweed	3	Native	
Araceae	*Lemna minor*	common duckweed	2	Native	
Asparagaceae	*Asparagus officinalis*	garden asparagus	0	Non-native	
Asteraceae	*Bidens cernua*	nodding beggartick	5	Native	
Asteraceae	*Centaurea* sp.	knapweed	0	Non-native	
Asteraceae	*Cirsium arvense*	Canada thistle	0	Non-native	List B
Asteraceae	*Conyza canadensis*	Canadian horseweed	1	Native	
Asteraceae	*Dieteria canescens*	hoary tansyaster	4	Native	
Asteraceae	*Helianthus nuttallii*	Nuttall's sunflower	3	Native	
Asteraceae	*Lactuca serriola*	prickly lettuce	0	Non-native	
Asteraceae	*Solidago canadensis*	Canada goldenrod	5	Native	
Asteraceae	*Symphyotrichum ericoides*	aster	4	Native	
Asteraceae	*Xanthium strumarium*	rough cocklebur	1	Native	
Brassicaceae	*Camelina microcarpa*	littlepod false flax	0	Non-native	
Brassicaceae	*Nasturtium officinale*	watercress	0	Non-native	
Brassicaceae	*Thlaspi arvense*	field pennycress	0	Non-native	
Cannabaceae	*Humulus neomexicanus*	common hop	5	Native	
Caprifoliaceae	*Symphoricarpos occidentalis*	western snowberry	3	Native	
Caryophyllaceae	*Saponaria officinalis*	bouncingbet	0	Non-native	List B
Caryophyllaceae	*Silene* sp.	catchfly	0	Unknown	
Cornaceae	*Cornus sericea* ssp. *sericea*	redosier dogwood	7	Native	
Cucurbitaceae	*Echinocystis lobata*	wild cucumber	3	Native	
Cupressaceae	*Juniperus scopulorum*	Rocky Mountain juniper	5	Native	
Cyperaceae	*Carex emoryi*	Emory's sedge	5	Native	

Cyperaceae	*Eleocharis palustris*	common spikerush	3	Native	
Cyperaceae	*Schoenoplectus tabernaemontani*	softstem bulrush	3	Native	
Dipsacaceae	*Dipsacus laciniatus*	cutleaf teasel	0	Non-native	List B
Elaeagnaceae	*Elaeagnus angustifolia*	Russian olive	0	Non-native	List B
Fabaceae	*Amorpha fruticosa*	false indigo bush	7	Native	
Fabaceae	*Glycyrrhiza lepidota*	American licorice	3	Native	
Fabaceae	*Lathyrus latifolius*	perennial pea	0	Non-native	
Fabaceae	*Melilotus* sp.	sweetclover	0	Non-native	
Grossulariaceae	*Ribes aureum*	golden currant	6	Native	
Juncaceae	*Juncus arcticus*	arctic rush	4	Native	
Lamiaceae	*Mentha arvensis*	wild mint	4	Native	
Lamiaceae	*Nepeta cataria*	catnip	0	Non-native	
Oleaceae	*Fraxinus pennsylvanica*	green ash	0	Non-native	
Oleaceae	*Ligustrum vulgare*	European privet	0	Non-native	
Onagraceae	*Oenothera curtiflora*	velvetweed	1	Native	
Onagraceae	*Oenothera villosa*	hairy evening primrose	4	Native	
Pinaceae	*Pinus ponderosa*	ponderosa pine	5	Native	
Plantaginaceae	*Plantago lanceolata*	narrowleaf plantain	0	Non-native	
Plantaginaceae	*Veronica americana*	American speedwell	6	Native	
Poaceae	*Bromus inermis*	smooth brome	0	Non-native	
Poaceae	*Dactylis glomerata*	orchardgrass	0	Non-native	
Poaceae	*Echinochloa crus-galli*	barnyardgrass	0	Non-native	
Poaceae	*Elymus* sp.	wildrye	0	Unknown	
Poaceae	*Glyceria striata*	fowl mannagrass	5	Native	
Poaceae	*Phalaris arundinacea*	reed canarygrass	1	Cryptogenic	
Poaceae	*Poa pratensis*	Kentucky bluegrass	0	Non-native	
Poaceae	*Sporobolus airoides*	alkali sacaton	5	Native	
Poaceae	*Thinopyrum* sp.	wheatgrass	0	Non-native	
Polygonaceae	*Fallopia convolvulus*	black bindweed	0	Non-native	
Polygonaceae	*Persicaria* sp.	knotweed	0	Unknown	
Polygonaceae	*Rumex crispus*	curly dock	0	Non-native	
Ranunculaceae	*Clematis ligusticifolia*	western white clematis	4	Native	
Ranunculaceae	*Ranunculus* sp.	buttercup	0	Unknown	

Rosaceae	*Crataegus succulenta*	fleshy hawthorn	5	Native	
Rosaceae	*Prunus americana*	American plum	6	Native	
Rosaceae	*Prunus virginiana* var. *melanocarpa*	black chokecherry	4	Native	
Rosaceae	*Rosa acicularis* ssp. *sayi*	prickly rose	5	Native	
Ruscaceae	*Maianthemum stellatum*	starry false lily of the valley	7	Native	
Salicaceae	*Populus deltoides* ssp. *monilifera*	plains cottonwood	3	Native	
Salicaceae	*Salix ×fragilis*	crack willow	0	Non-native	
Salicaceae	*Salix amygdaloides*	peachleaf willow	5	Native	
Salicaceae	*Salix exigua*	narrowleaf willow	3	Native	
Sapindaceae	*Acer glabrum* var. *glabrum*	Rocky Mountain maple	7	Native	
Sapindaceae	*Acer negundo*	boxelder	4	Native	
Scrophulariaceae	*Verbascum thapsus*	common mullein	0	Non-native	List C
Typhaceae	*Typha* sp.	cattail	1	Cryptogenic	
Ulmaceae	*Ulmus pumila*	Siberian elm	0	Non-native	Watch List
Verbenaceae	*Verbena hastata*	swamp verbena	4	Native	
Vitaceae	*Vitis riparia*	riverbank grape	5	Native

Abstract: *Many bird species are in local or regional decline because of habitat loss or degradation. We attempted to disentangle the effects of residential development from the effects of forest size on forest-bird communities, with particular emphasis on Neotropical migrant species. Two variables were examined for their influence on avian diversity and abundance: forest size and the number of houses outside a forest within 100 m of the edge. We found that Neotropical migrants consistently increased in number and abundance as forest size increased. Of greater interest, we found that the number of houses surrounding a forest severely undermined its suitability for Neotropical migrants. Neotropical migrants consistently decreased in diversity and abundance as the level of adjacent development increased, regardless of forest size. The effects of development were striking: 4-ha woodlots without any nearby houses had on average a richer, more abundant Neotropical community than did 25-ha urban woodlots. No predictable pattern of change concerning development or forest size was observed for short-distance migrants or permanent residents. Current planning regulations generally permit housing right up to forest edges. This practice may prevent protection of ecological features within the forest. Threshold distances for housing developments around forests need to be determined to prevent or minimize adverse effects on features and functions within the forests.*

Efectos del desarrollo urbano sobre los bosques habitados por aves neotropicales migratorias

Resumen: *Numerosas especies de aves han disminuido a nivel local o regional debido a la pérdida del hábitat y a la degradación del ambiente. Intentamos separar los efectos del desarrollo residencial de los efectos del tamaño del bosque sobre las comunidades de aves, poniendo particular énfasis en las especies neotropicales migratorias. Se examinaron dos variables para determinar su influencia en la diversidad y abundancia de las aves: el tamaño del bosque y el numero de casas fuera del bosque a menos de 100 m del borde. Encontramos que las aves neotropicales migratorias incrementaron consistentemente en número y en abundancia, en la medida en que el tamaño del bosque se incrementó. De mayor interes aún, encontramos que el número de casas que rodean al bosque disminuyó severamente su grado de adecuación para ser usado por los migrantes neotropicales. Las aves neotropicales migratorias decrecieron consistentemente en diversidad y en abundancia, a medida que el nivel de desarollo de las áreas adyacentes se incrementó, independientemente del tamaño del bosque. Los impactos del desarrollo fueron sorprendentes: 4-ha de un rodal sin ninguna casa en las cercanías tuvo en promedio una comunidad de aves neotropicales más rica y abundante que en un rodal de 25-ha un área urbana. No se observón ingún patrón de cambio predecible en relación al desarrollo o al tamaño del bosque para aves migratorias de corta distancia o residentes permanentes. Las regulacions actuales de planificación, permiten en general la urbanización hasta el borde mismo del bosque. Esta práctica puede ser insuficiente para proteger las características ecológicas dentro del bosque. Se necesita determinar las distancias umbrales que debe guardar el desarrollo urbano alrededor de los bosques, para prevenir o minimizar los impactos adversos sobre las características y las funciones dentro del bosque.*

Exhibit B- Public Comment to PC

Introduction

Rural landscapes have changed dramatically in recent decades as settlement and new development have spilled into the countryside. Natural areas have come under increased human pressures that may exacerbate the negative effects of fragmentation. We attempted to disentangle some of the effects of residential housing and forest-fragment size on forest birds, particularly long-distance (Neotropical) migrants.

Considerable effort has gone to studying fragmentation effects on forest birds in eastern North America (reviewed in Hagan & Johnson 1992). Forest size has been identified as a key determinant of avian community structure: many forest-dwelling Neotropical species (hereafter Neotropical migrants) decline in number or become locally extinct when forests are subdivided (Askins et al. 1990). Factors that measure vegetation structure have proven far less important than forest area in predicting the presence and abundance of Neotropical migrants (Ambuel & Temple 1983; Askins et al. 1987; Blake & Karr 1987).

Fragmentation dynamics cannot be considered only within the context of habitat size. Remnant patches are subject to many adverse effects. Saunders et al. (1991) contend that in small patches "ecosystem dynamics are probably driven predominantly by external rather than internal forces." For example, suburbanization may not necessarily result in forest loss (woodlands are spared even as development encircles them), but the urban surroundings may negatively affect forest avifauna (Engels & Sexton 1994). Detrimental influences associated with urban sprawl may be the reason why many species of forest birds continue to decline even where forest regeneration has occurred (Herkert et al. 1993).

Forest fragments of similar size and vegetative structure may not be ecologically equal because of differences in their surroundings. This raises a number of questions with respect to housing developments. Do Neotropical migrant communities undergo change when houses are situated around but not in forests? How many houses are needed to induce a change? Are larger forests less vulnerable to effects from housing than smaller forests? Which Neotropical migrants are most sensitive to development? What are the implications for urban planning and the management of forest bird communities?

We examined the effects on Neotropical migrants of the number of houses surrounding forests for three different forest-size classes.

Methods

Study Area and Site Selection

Field research was conducted in 1992 and 1994. All study sites in 1992 and all except four in 1994 were located in the Region of Waterloo in southwestern Ontario (43°N 80°W). The Region of Waterloo encompasses an area of 137,369 ha and has a population of 396,000 (Regional Municipality of Waterloo 1994). The four additional sites in 1994 were all within the city of Guelph (population 80,000), located 12 miles to the east of the Region of Waterloo.

The Region of Waterloo is an intensively farmed district with about 14% of the landscape remaining under forest cover (Ontario Ministry of Natural Resources 1981). Forests in this area comprise part of the Lower Great Lakes–St. Lawrence forest belt. Woodlands are small (few exceed 80 ha in size) and virtually no old-growth forest remains (Elkin 1987).

Seventy-two woodlot sites were selected for study in each of the two years. Sixty-three of the sites were studied in both years; nine different woodlots were included in 1994 either to increase sample sizes or because original sites were modified (logged, internal housing developments constructed, or site destroyed). All sites were initially identified on 1:5000 air photo maps (1990 edition), and their condition was verified by site visits. Woodlots were chosen on the basis of being discrete patches separated from other tracts by at least 100 m of open ground. Woodlands that were long and narrow, that were recently logged or grazed, or that contained streams or steep slopes were not selected.

Primary habitat at all sites was upland deciduous forest, with sugar maple (*Acer saccharum*) being the dominant tree and sapling species. Given the structural uniformity of the sites and knowing that vegetative variables have usually not been strong predictors of Neotropical forest birds, a detailed vegetation survey was not undertaken.

Woodlots were selected in one of three discontinuous size categories (Table 1): small (3–4 ha); medium (8–15 ha); large (20–50 ha). A size variable was included in the study primarily to test whether the effects of development were dependent on forest size. Woodlots were then classified according to the number of houses outside their perimeters within 100 m of the forest edge: 0 houses (no development); 1–3 houses (low development); 8–15 houses (medium development); and ≥ 25 houses (high development). Woodlots with houses inside their borders were not selected.

Bird Censusing

A single survey station was established in each forest, either in the approximate center or, if the site was sufficiently large, at least 250 m from the nearest edge. A single-point count method (Whitcomb et al. 1981) was used to sample populations of forest birds. The point counts assumed a fixed radius of 100 m (Whitcomb et al. 1981). The area surveyed was approximately 3.6 ha, which was the approximate size of the smallest wood-

Table 1. Number of woodlot sites by size and development class.

Woodlot size	*Size (ha)*	*Development class*	*Number of adjacent houses*	*Number of sites 1992*	*Number of sites 1994*
Small					
	3–4	none	0	7	6
	3–4	low	1–3	7	6
	3–4	medium	8–15	6	6
	3–4	high	⩾ 25	6	6
Medium					
	8–15	none	0	6	6
	8–15	low	1–3	7	6
	8–15	medium	8–15	6	6
	8–15	high	⩾ 25	5	6
Large					
	20–50	none	0	6	6
	20–50	low	1–3	5	6
	20–50	medium	8–15	6	6
	20–50	high	⩾ 25	5	6

lots in the study. Sampling area for most species was therefore similar at all sites regardless of forest size.

It should be noted that radius distance was of no consequence in assessing development effects because comparisons of bird communities were made only within forest-size classes and not between them (small sites were compared to other small sites, medium sites to medium, large sites to large). Any bias in the point-count method would therefore apply equally to all of the sites in any particular size class.

The same two observers were used in each year of the study. Stations were visited twice, once in early June and again about two weeks later. Each visit was of 20 minutes duration. The order of visits was staggered so that each station was sampled once between 0530 and 0715 hours and once between 0715 and 0900 hours. All birds detected by song or sight (except flyovers and those calling from outside the forests) were recorded. The maximum number of each species detected during the two visits was taken as the measure of abundance for that species.

Statistical Methods

We summarized the raw data for each site in each year by calculating the number of individuals (abundance) and the number of species classified according to migration strategy (whether the species was a Neotropical migrant, short-distance migrant, or permanent resident according to classifications by Whitcomb et al. [1981] and Freemark & Collins [1992]).

The two summaries for Neotropical migrants were the dependent variables in the formal analysis. The independent variables were indicator variables corresponding to size class and urban development category. The data were modeled with an appropriate generalized linear model (McCullagh & Nelder 1983). In each case, a Poisson link function was used in which the mean abundance or number of species, μ_{ij}, at a site in size class i and development class j is related to the independent variables by the model

$$\log\ \mu_{ij} = \mu + \partial_i + \beta_j + (\partial\beta)_{ij}$$
$$i = 1, \ldots, 3, \quad j = 1, \ldots, 4.$$

The models, which were fit separately for each year, correspond to those for a two-way analysis of variance with interaction. The parameter ∂_i represents the effect of size class i, β_j the effect of development class j, and $(\partial\beta)_{ij}$ the interaction between the size class and the development category. If a model with $(\partial\beta)_{ij} = 0$ fits the data, the effect of changing development category is the same within each size class.

The models were fit to the data using the SAS procedure Proc Genmod (SAS version 6.0, SAS Institute 1990) to construct an analysis of deviance (McCullagh & Nelder 1983). The order of fitting was first the full model, then the model without interaction terms, and finally the model without the main effect terms. The change in deviance was used to examine the significance of the various parameters in the models.

Results

The response of the three migratory groups to forest size and development levels was similar for the two years (Table 2). The formal analysis yielded consistent results for each year.

The number of houses near a site significantly affected Neotropical migrants. This group consistently decreased in diversity and abundance as the level of adjacent devel-

Exhibit B- Public Comment to PC

opment increased ($p < 0.001$, Fig. 1). Within each of the three size classes, woodlots with no development contained the most diverse and abundant Neotropical migrant community (the one exception being in medium-sized woodlots in 1994). Just the reverse pertained to high development sites that invariably held the lowest diversity and abundance of Neotropical migrants in all three size classes.

Differences between high and no development classes were striking: high development sites in all three size classes had less than half the average diversity and one-third to one-half the average abundance of Neotropical migrants of no development sites. In both years there was no evidence ($p > 0.10$) of an interaction between size class and development level. This means that the effects of development on abundance and diversity of the group were independent of forest-size class. Average diversity levels of Neotropical migrants dropped off most sharply at the development level of ≥ 25 houses (Fig. 1). Average abundance levels declined sooner, indicating that, while many species were present in the low and medium development sites, they occurred in lower numbers.

Table 2. Mean number of species and mean individual abundance recorded at each survey site in 1992 (first column) and 1994 (second column), grouped according to migration strategy.

Comparison of the nine most common Neotropical species (accounting for more than 91% of Neotropical, abundance each year) suggests varying sensitivities to development pressures. The Great Crested Flycatcher (scientific names of birds are given in Appendix 1) and Red-eyed Vireo were least affected by the presence of houses (Tables 3 and 4). The Eastern Wood-Pewee, the most abundant Neotropical migrant in this study and a species considered to be fairly tolerant of human activity (Cheskey 1991), displayed a clear preference for no-development as opposed to high-development forests (Table 4).

The most dramatic response to development came from the Wood Thrush. This species was common at no- and low-development sites but practically disappeared from high-development forests (Tables 3 and 4). In 1994 not one of 18 urban woodlots harbored even a single Wood Thrush. A similar disaffection for high-development sites was seen among Scarlet Tanagers, Rose-breasted Grosbeaks, and (surprisingly, give its reputation as a backyard bird) Northern Oriole.

Neotropical migrants tended to increase in diversity and abundance as forest size increased ($p < 0.001$; Table 2), consistent with findings reported elsewhere. In both years, no predictable pattern of change in response to development levels or forest size was observed for short-distance migrants or permanent residents (Table 2).

Discussion

Urban sprawl is widespread in North America and threatens to negate the benefits of forest regrowth that has occurred in many regions (Askins et al. 1990). As development reaches into rural areas, many forests, if not fragmented or obliterated outright, are enveloped by human settlement. These forests may subsequently lose parts of their avian communities not because of habitat loss but because of negative influences associated with nearby urban development.

Forman and Godron (1986: 314) noted that the importance of surroundings "is emerging as a critical issue in landscape planning and management." Our study suggests that external effects severely deflate the ecological value of adjacent forests (Neotropical migrants being an indicator of this value). Moreover, the effects are not dependent on size because large forests seem as vulnerable to development stresses as small forests. Keeping forests intact is in itself inadequate to maintaining healthy forest-bird communities. For example, 4-ha woodlots with no surrounding development contained Neotropical migrants in higher average diversity and abundance than 25-ha urban woodlots (Table 2).

Exhibit B- Public Comment to PC

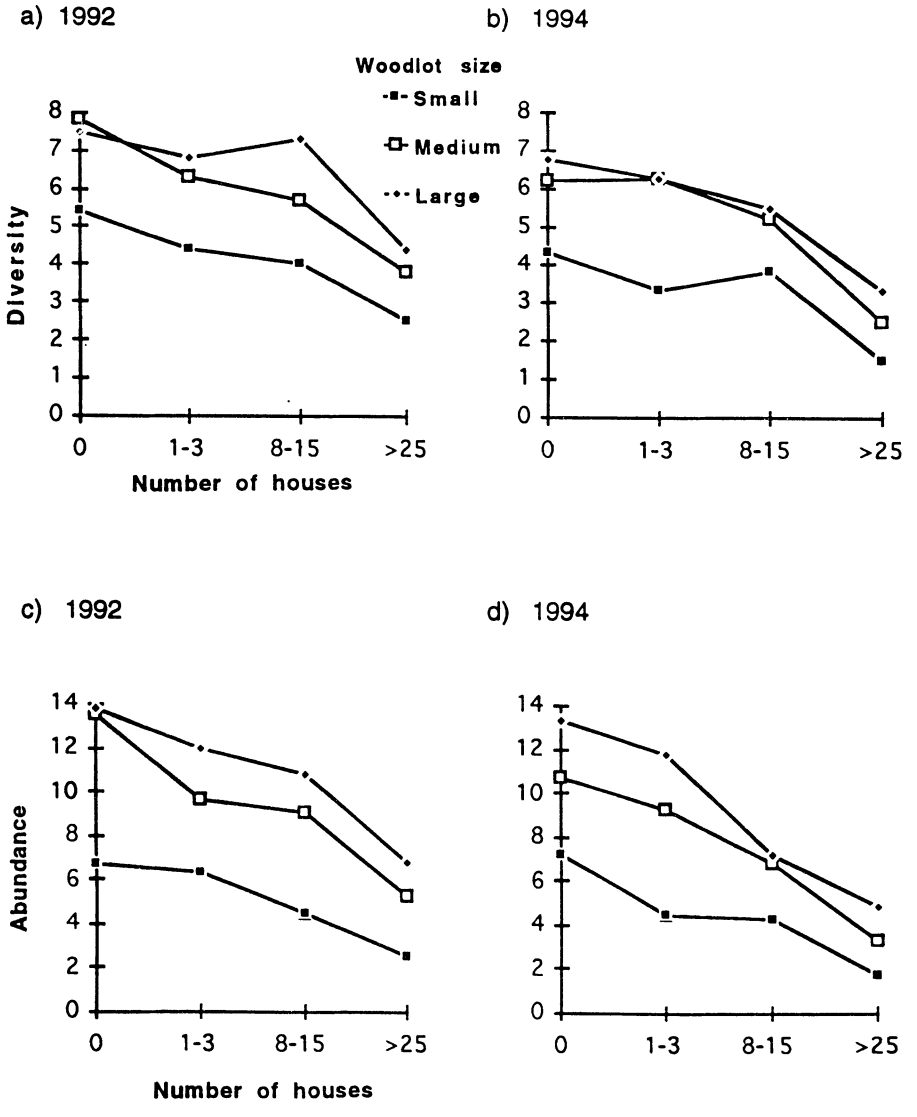

Figure 1. Average species diversity (a and b) and individual abundance (c and d) of Neotropical migrants versus surrounding development.

The Wood Thrush is in trouble throughout its breeding range (Robbins et al. 1989); the species' abundance in Ontario is estimated to be only 19% of what it was in the early 1960s (Hussell 1992). Its decline, and that of other forest birds, is difficult to explain, though it is likely that habitat alteration in both the temperate and Neotropical zones ultimately plays a role. Our study suggests that degradation of breeding habitat due to urban encroachment may be a contributing factor to the disappearance of these birds. The virtual absence of Wood Thrush from urban forests in the Waterloo Region certainly casts doubt on the contention that the species "has recently shown tolerance even of wooded areas within cities" (Sadler 1987).

The breeding success of Neotropical migrants in Illinois was almost too low to measure owing to extreme rates of nest predation and parasitism (Robinson 1992). In southern Ontario some Neotropical migrants were not present to breed (no matter how successfully) in forest fragments, even though apparently suitable nesting habitat was available; factors associated with urban development undermined the forests' suitability for these species.

Identifying what it is about houses that renders forest fragments unfit for Neotropical migrants was beyond the scope of this research. Several mechanisms are possible and beg further study. House cats are potent predators of small birds in urban and suburban environments and may be a factor in depressing songbird populations (Churcher & Lawton 1989). Gray squirrels (*Sciurus carolinensis*) abound in cities, subsidized in part by bird feeders, and may be important nest predators, although they have been overlooked in most passerine predation studies (Leimgruber et al. 1994). A species' psychological need for maintaining distance from houses (Whitcomb et al. 1981) and social behavior that requires the presence of conspecifics (Morton 1992) may also play a role in limiting some songbirds.

Found in a minimum of 10 woodlots in one of the years.

Management Implications

There is growing agreement among planners, politicians, and the public on the need for preserving and enhancing healthy ecosystems. For example, the Commission on Planning and Development Reform in Ontario has recommended that "development shall not be permitted on adjacent and related lands if it adversely affects the integrity of the natural features or ecological functions of the areas" (Ontario Ministry of Municipal Affairs 1993).

Current planning practice generally permits housing to extend right up to forest perimeters. This practice, while physically preserving forests, may fail to safeguard their ecological features. Complex interactions take place along the interface of the two very different ecosystems—urban and suburban versus forest—the effects of which seem especially harmful to Neotropical migrants. Forests cannot be expected to retain their ecological identity as the land around them is subject to ever-intensified human use.

It is time to rethink our strategies for protecting val-

ued woodlands. In Ontario significant wetlands now receive special protection: development is unequivocally prohibited within their boundaries, and buffers of 120 m are required around them to protect their functions and features (Ontario Ministry of Municipal Affairs 1992). Threshold distances for housing developments around woodlots likewise need to be determined in order to prevent or minimize potentially adverse effects.

Acknowledgments

Ted Cheskey assisted with the field work and, along with Virgil Martin, provided helpful suggestions and advice throughout the study. Two anonymous reviewers gave constructive criticism to an earlier draft of the manuscript.

Appendix 1

Neotropical migrant species recorded in the region of Waterloo in 1992 and 1994.

Common name	*Scientific name*
Ruby-throated Hummingbird	*Archilochus colubris*
Eastern Wood-Pewee	*Contopus virens*
Willow Flycatcher	*Empidonax traillii*
Least Flycatcher	*Empidonax minimus*
Great Crested Flycatcher	*Myiarchus crinitus*
Eastern Kingbird	*Tyrannus tyrannus*
Blue-gray Gnatcatcher	*Polioptila caerulea*
Veery	*Catharus fuscescens*
Wood Thrush	*Hylocichla mustelina*
Yellow-throated Vireo	*Vireo flavifrons*
Red-eyed Vireo	*Vireo olivaceus*
Warbling Vireo	*Vireo gilvus*
Cerulean Warbler	*Dendroica cerulea*
Chestnut-sided Warbler	*Dendroica pensylvanica*
Black-throated Green Warbler	*Dendroica virens*
American Redstart	*Setophaga ruticilla*
Common Yellowthroat	*Geothylpis trichas*
Northern Waterthrush	*Seiurus noveboracensis*
Mourning Warbler	*Oporornis philadelphia*
Ovenbird	*Seiurus aurocapillus*
Scarlet Tanager	*Piranga olivacea*
Rose-breasted Grosbeak	*Pheucticus ludovicianus*
Indigo Bunting	*Passerina cyanea*
Northern Oriole	*Icterus galbula*

Abstract. Riparian areas in western North America have been characterized as centers of avian diversity, yet little is known about the ways that native species in streamside habitats are affected by development nearby. To address this issue, we examined patterns of habitat use by birds during the 1995–1997 breeding seasons at 16 lowland riparian sites representing an urban-to-rural gradient. As development increased, riparian woodlands tended to have fewer native trees and shrubs, less ground and shrub cover, higher tree densities, and greater canopy closure. Bird species richness also declined as urbanization increased in the surrounding landscape. Canonical correspondence analysis (CCA) revealed that measures of settlement intensity best explained variation in habitat use by riparian birds, although some residual variation was accounted for by differences in woodland understory features. Migrant and low-nesting species were associated with lower-than-average levels of development, whereas resident and cavity-nesting species tended to increase with urbanization. In partial CCA analyses, however, local habitat variables explained twice the variation that measures of settlement did; nearly half of all explained variation could be attributed to local and landscape variables simultaneously. For avian guilds based on migratory, nesting, and foraging behavior, regression analyses showed that the best variables for explaining patterns of habitat use were usually those that reflected levels of urbanization, particularly at broad scales. When the effects of local habitat variation were removed, however, the best variables for explaining residual variation in habitat use tended to describe development at relatively fine scales, especially for species that nested or foraged low for insects or seeds. These species were also the most sensitive to human trail use. Our analyses indicated that bird communities and local habitat conditions in riparian areas were both affected by development in the surrounding landscape. It may be possible to mitigate the negative impacts of human settlement on native birds in streamside woodlands by maintaining or restoring vegetation structure and composition, and by imposing limits on human recreational activity in these habitats.

Key words: *avian guilds; bird community; Colorado Front Range (USA); gradient design; habitat structure; recreation trails; riparian habitat; urbanization.*

INTRODUCTION

The conservation value of riparian areas is disproportionate to their spatial extent, particularly in arid and semi-arid environments. In the western United States, these habitats account for <1% of the total land surface (Knopf et al. 1988), yet up to 80% of vertebrate species depend on them during all or part of their life cycles (Chaney et al. 1990). Riparian areas in this region provide critical resources for migrating and breeding birds (Knopf and Samson 1994, Skagen et al. 1998) and harbor some of the most diverse avian assemblages in North America (Johnson et al. 1977, Ohmart 1994).

People also tend to settle near streams and rivers. Throughout history, rivers have provided a means of transportation, water for drinking and irrigation, food, barriers for defense, power generation, scenic beauty, and recreational opportunities. Examine a typical roadmap of the United States and it is difficult to find a watercourse that is not bordered by human population centers; as aridity increases, it is rare to find towns and cities elsewhere. The association is even stronger if one considers forms of settlement that are usually not depicted on maps, such as exurban and rural development. How do birds in riparian habitats respond to these patterns?

We know that birds are affected by urbanization, but the magnitude of these effects and whether they are positive or negative varies among species (Marzluff et al. 2001). Most studies of the effects of development

Exhibit B- Public Comment to PC

on birds focus on areas directly affected, where native habitats are altered or replaced by buildings and paved surfaces. A few species thrive under these conditions by exploiting the unique nesting and foraging opportunities that such environments provide (Lancaster and Rees 1979, Beissinger and Osborne 1982, DeGraaf and Wentworth 1986), but many species decline or disappear as settlement intensity increases (Blair 1996, Clergeau et al. 1998). Factors that have been implicated in these declines, such as interactions with human commensal species (including domestic pets) or changes in the availability of food resources, may also affect birds in streamside habitats that are proximate to urban and suburban areas. On the other hand, the effects of settlement may be less direct in the riparian zone itself because, in many cases, floodplain designations relegate construction to the uplands.

Numerous studies have shown that, for a variety of taxa (including birds in riparian woodlands; Saab 1999), it is important to consider features of the surrounding landscape when examining patterns of habitat use (Mazerolle and Villard 1999). Moreover, there is evidence that birds in habitat remnants respond to human settlement in adjacent areas (Engels and Sexton 1994, Friesen et al. 1995). Few studies have examined the effects of development on riparian bird communities, however, despite recognition of the conservation value of these habitats. In a recent review of published studies (n = 101) on the effects of urbanization on birds (Marzluff 2001), only five considered riparian areas. Of these, two focused on a single species and one examined the suitability of suburban habitats for riparian birds in terms of vegetation structure and composition (Rosenberg et al. 1987). Dowd (1992) compared the bird communities in two forested wetlands in New York City, one surrounded by development and one embedded in a large greenway, and found that the latter supported more forest-interior species. Only Rottenborn (1999) studied the relationship between development and the composition of bird communities at multiple sites, and included measures of local habitat and the surrounding landscape in his analyses. He found that bird species richness and overall density were lower at more urbanized sites, as was the density of most individual species, and he concluded that habitat characteristics at both scales influenced these results.

Clearly, variation in riparian-habitat features is not independent of human land use in the surrounding landscape. In populated areas, both the structure and composition of riparian vegetation may be altered by the planting or removal of trees and shrubs. Creeks and streams in urban and suburban settings are frequently subjected to diversion, straightening, or stabilization, and such modifications may adversely affect native vegetation that is adapted to a more natural hydrologic regime (Miller et al. 1995, Auble et al. 1997). Birds are likely to be affected not only by structural changes to riverine habitats, but also by an increased human presence there. Riparian corridors often serve as the backbone for greenway networks, partly because people like to be near water and also because other forms of development may be restricted by zoning regulations. Paved trails that parallel the watercourse are typically the centerpiece of such greenways, and trail use tends to reflect the degree of urbanization nearby. Several studies have documented effects of pedestrian traffic on birds (Nowakowski 1994, Fernández-Juricic 2000, Miller and Hobbs 2000), but, as with development generally, species vary in their sensitivity to this type of disturbance.

In regions with an expanding human population, it is not likely that settlement will be completely excluded from lands near rivers and streams. It may be possible, however, to mitigate the adverse effects of development on birds that use riparian habitats, but it is first necessary to achieve a clearer understanding of potential mechanisms underlying such effects. Here, we ask how human settlement has affected riparian birds by documenting patterns of habitat use in streamside woodlands near the Colorado Front Range (USA). We emphasize community-level impacts throughout to gain a broader perspective than that provided by studies focused on single species (Wiens 1989). To assess the effects of human settlement, we compare lowland riparian bird communities at sites associated with different levels of development on adjacent lands, and examine the degree to which variation in community structure and composition can be explained by local habitat features and by patterns of settlement in the surrounding landscape.

Methods

Study sites

In the spring of 1995 we selected 16 study sites on four drainages, just east of the Front Range of Colorado, USA. Sites on three of these drainages (Coal Creek, South Boulder Creek, and Boulder Creek) were located in and around the City of Boulder, and sites on the remaining drainage (the Cache la Poudre River) were located ~48 km to the north in and around the City of Fort Collins (Fig. 1). Colorado's population has grown at a rate three times the national average since 1990 (U.S. Bureau of the Census 2000), with much of this growth manifested by urban and suburban sprawl. The overall study area is located on the western edge of the Plains Grassland zone as described by Marr (1961, 1964), where ~80% of the state's population lives in a corridor that is roughly 30 km wide and bisects the state from Fort Collins in the north to Pueblo in the south. Elevations range from ~1550 m in eastern Boulder and Larimer counties to 1640 m near the foothills of the Rocky Mountains.

Sites were chosen to represent a gradient of human settlement intensity from urban to exurban areas (Aus-

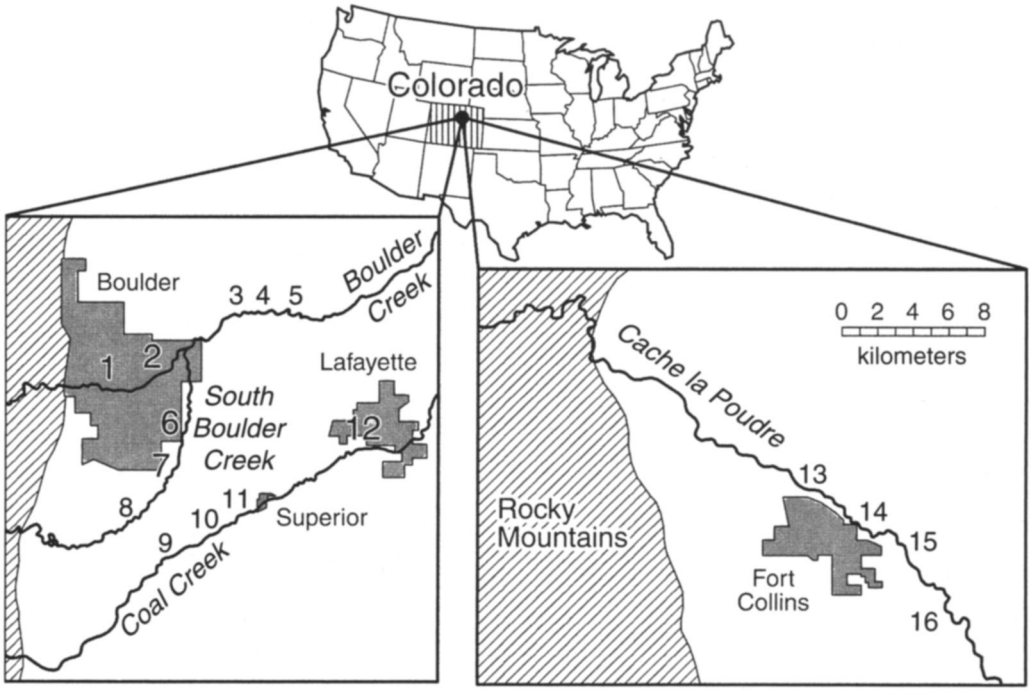

FIG. 1. Location of the 16 study sites used to examine the relationship between avian communities in lowland riparian areas and human settlement in Larimer and Boulder counties, Colorado, USA: (1) University of Colorado, (2) 30th Street, (3) Walden, (4) Kaufman, (5) Ertl, (6) Bobolink, (7) Eldorado, (8) South Vale, (9) Vista View, (10) Mine, (11) Superior, (12) Lafayette, (13) Shields, (14) Lemay, (15) 7 Ponds, and (16) Gateway. (Lower left panel [Boulder] is ~48 km south of lower right panel [Fort Collins].)

tin and Heyligers 1991, Wiens and Parker 1995). Study sites in Boulder County were all under the jurisdiction of either the Boulder County Parks and Open Space Department or the City of Boulder Open Space Department, and those in Larimer County were managed by the Fort Collins Department of Natural Resources. All of the sites were wooded and relatively narrow, averaging 60–110 m in the width of the woody riparian zone. Dominant tree species included plains cottonwood (*Populus deltoides*), green ash (*Fraxinus pennsylvanicus*), box elder (*Acer negundo*), hybrids (*Populus* × *acuminata*) of plains cottonwood and narrowleaf cottonwood (*Populus angustifolia*), and an exotic, crack willow (*Salix fragilis*). The understorys were dominated by snowberry (*Symphoricarpus occidentalis*), chokecherry (*Prunus virginiana*), wild rose (*Rosa woodsii*), lead plant (*Amorpha fruticosa*), and sandbar willow (*Salix exigua*). Most of the sites have a history of grazing by livestock since European settlement, but only Eldorado Springs, Vista View, the Mine, and Superior (see Fig. 1) were grazed during the course of the study and these only in fall and winter. The uplands surrounding the sites were comprised of shortgrass and mixed-grass prairie prior to settlement, and have since been used for livestock grazing, haying, and irrigated row crops, or have been subjected to commercial or residential development.

Local habitat and landscape variables

We established a transect that paralleled the watercourse at each site. Each transect had a random start and was comprised of 12 avian census points spaced at 110-m intervals (Bibby et al. 1992). At each point we quantified vegetation structure and composition using a modified point-centered-quarter method (Friedman et al. 1996*a*). We first identified the 10 closest trees, with the distance to the farthest tree serving as the radius of a circle used in quantifying other vegetation features (Table 1). This method provided an efficient means for gathering data over a large number of points and, for our purposes, offered two additional advantages over the traditional point-centered quarter method (Cottam and Curtis 1956). First, sample size was fixed for estimating tree density, which was especially important where trees were sparse; and second, time was saved in densely wooded areas.

At each point, we noted the species and measured the height and the dbh (diameter at breast-height [~1.5 m]) of each of the 10 trees. Total basal area per point was later derived from the dbh measurements. Indices of total vegetation cover for the canopy, subcanopy, shrub, and ground layers were derived by multiplying estimates of a particular layer's coverage by its density within the area covered. These data were visually estimated using discrete categories: 5 = >75%, 4 = 50–

TABLE 1. Landscape and site variables for 16 lowland riparian areas near the Front Range of Colorado, USA.

Variable code	Description
Local habitat variables	
TREEDENS	Average tree density (number/hectare) for points on a transect
TREEHT	Average tree height (in meters) for points on a transect
BASAL	Average basal area (in square centimeters) for points on a transect
NTREE	Average percentage of trees for points on a transect that are native to study area
NSHRUB	Average percentage of shrubs for points on a transect that are native to study area
TRICH	Average number of tree species for points on a transect
SRICH	Average number of shrub species for points on a transect
CAN	Total coverage of tree canopy on a transect (for trees >8 m tall)
SUBCAN	Total coverage of tree subcanopy on a transect (for trees 3–8 m tall)
SHRUB	Total coverage of shrubs on a transect (for shrubs 0.5–3 m tall)
SAPL	Average sapling (dbh <15 cm) density (number/hectare) for points on a transect
GRND	Total coverage of herbaceous vegetation (0.5–3 m tall) on a transect
HERB	Average height (in centimeters) of herbaceous vegetation for points on a transect
SNAG	Average number of standing dead trees for points on a transect
Landscape variables	
D1500	Buildings per hectare within 1500 m of a transect
D500	Buildings per hectare within 500 m of a transect
D100	Buildings per hectare within 100 m of a transect
D10	Average distance (in meters) to the 10 buildings closest to the transect
AGE_D10	Average age (in years) of buildings in D10
WIDTH	Width (in meters) of the woody riparian zone

75%, 3 = 25 to <50%, 2 = 5 to <25%, and 1 = <5%. At each point, we also noted the species composition of the shrub layer and recorded the abundance of saplings, standing dead trees, and the height of herbaceous vegetation.

In addition to local habitat variables, we measured characteristics of the surrounding landscape (Table 1). The UTM (Universal Transverse Mercator) coordinates of all census points were determined to within ±3 m using a global positioning system; these coordinates were subsequently used to position transects in digital data layers. We used ArcView software (ESRI 1995) and digital parcel maps to quantify building density within 100 m, 500 m, and 1500 m of each transect (hereafter, D100, D500, and D1500, respectively) and to measure the distance from each transect to the 10 nearest buildings (hereafter, D10). Building density is a good surrogate for settlement intensity (Marzluff et al. 1998, Theobald 2000) and the parcel maps, made available to us by the Boulder and Larimer County planning offices, delineated property boundaries and provide standardized information on the status of a property (developed vs. undeveloped), as well as the number of buildings located there. Building age was not available for all parcels at all study sites, but was available for the 10 nearest buildings at each site and so we used the average age of these structures to represent the length of time since development.

The buffer distances were chosen a priori to describe the general patterns of settlement surrounding the sites based on our initial visual estimates. At some sites, building density was more or less constant with increasing distance from the riparian zone, but other riverine woodlands were separated from development by small undeveloped areas, such as hay meadows or tracts of prairie. The buffer distances also had an ecological basis, in that the shorter distances encompassed the territory sizes for most of the species we studied (Schoener 1968), whereas the longer distances allowed us to describe settlement at broader scales that might be important to migrating species when selecting habitats (e.g., Hutto 1985).

For smaller watercourses, the width of streamside woodlands has been shown to exert a strong influence on the composition and abundance of riparian bird communities, similar to the effect of patch area for upland birds (Stauffer and Best 1980, Keller et al. 1993, Darveau et al. 1995, Hodges and Krementz 1996, Groom and Grubb 2002). Using 1:24 000 digital aerial photos, we measured the width of woody riparian vegetation at each census point along an axis that was perpendicular to watercourse.

Avian surveys

We surveyed the avifauna at each site 3 times annually from mid-May to mid-July, 1995–1997, using fixed-radius point counts (Ralph et al. 1993, 1995). At each point a motionless observer recorded the species and number of all birds seen and heard within 50 m during an 8-min sampling period. Bird surveys were conducted between sunrise and approximately 0830 hours on days with no rain and wind speeds <32 km/h. Observers rotated visits to each site throughout the breeding season in order to minimize observer bias. On each day that censuses were conducted, sampling effort was distributed as evenly as possible among sites that had different levels of development (Verner 1985). Recreational trails were located in the riparian areas at eight of our study areas; in 1997, we counted people at each site using these trails during each of our avian

Exhibit B- Public Comment to PC

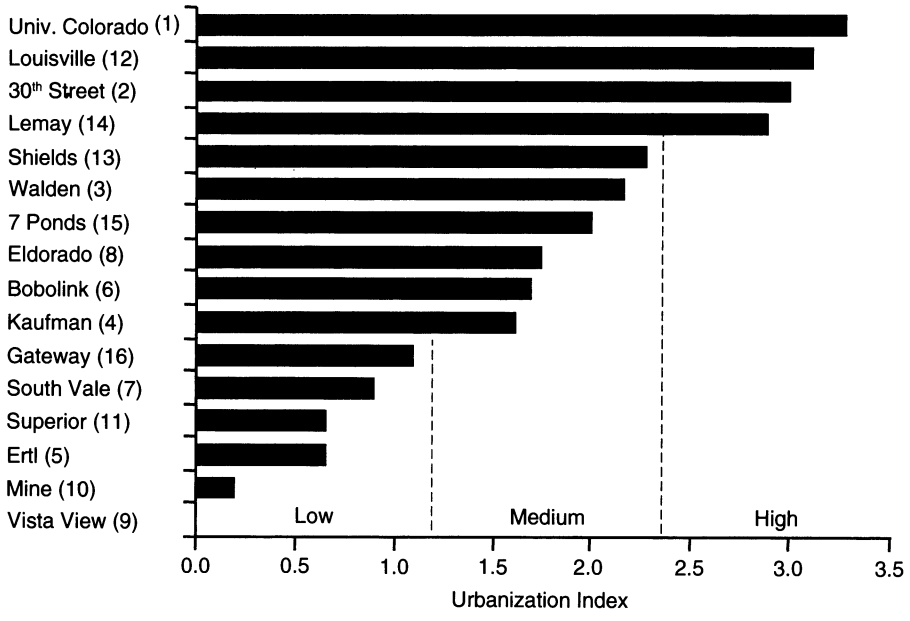

FIG. 2. Values of the urbanization index (URBAN, see *Methods: Data analyses*) for the study sites shown in Fig. 1, as indicated by numbers in parentheses.

surveys and for a 2-h period in the early evening (1700–2000 hours).

Surveys were conducted each year by 3–4 observers, all of whom had experience conducting point counts and were familiar with the avifauna of this region; two individuals participated in the study during each of the three years. Prior to each field season, all observers underwent a two-week training period to sharpen identification skills, with periodic recalibration throughout the season. Before the first field season, distances to obvious landmarks were measured at each census point to delineate the plot.

Data analyses

Transects were treated as the units of analysis in this study. We therefore averaged riparian width and all local habitat measures across the 12 points on each transect to produce an overall estimate for each site. In addition, we averaged the counts of people using trails in 1997 to estimate human activity at each site; this variable was treated separately in data analyses because only half of the study areas had trails. To obtain an overall measure of human settlement for each site, we created a synthetic variable (hereafter, URBAN; Fig. 2) from the Axis 1 scores of a rotated principal components analysis (PCA; ter Braak and Smilauer 1998) on D1500, D500, D100, and D10. Axis 1 of the PCA accounted for 90.6% of the variance in the data, and the correlations between Axis 1 and the four measures of building density were −0.893, −0.934, −0.907, and 0.890, respectively. We then used Spearman rank correlations to examine the relationship between the intensity of human settlement and local habitat variables.

We considered a bird species to be present at a site if it occurred on two or more surveys over the course of the study. Birds detected outside of the riparian corridor and species flying through or over the census plots were not included because we could not be sure that they were using riparian habitat. We also excluded nocturnal and crepuscular species, aerial insectivores, raptors, shorebirds, and waterfowl because point counts are not an effective method for censusing such species (Bibby et al. 1992). The maximum number of individuals recorded on a single survey during each year was used as an estimate of the annual abundance of each species at each site. Maximum rather than average counts were used because some species were either not present or were not singing during some visits, depending on migratory patterns or breeding cycles. Using the mean of all visits would therefore tend to underestimate the relative abundance of these species. We used a repeated-measures analysis of variance to test for annual differences in bird abundance, using drainage as the main effect and year as the repeated measure. There was no evidence of strong interannual effects on avian abundance (time, $P = 0.798$), or year × drainage interactions ($P = 0.523$), and because we were primarily interested in the overall impact of human settlement on bird communities and not annual variation, we averaged species relative abundance across years.

Because our study sites were spatially clustered (Fig. 1), there was a possibility that response variables lacked independence due to spatial autocorrelation. To test whether sites that were closer together were more likely to have similar bird communities, we computed a Mantel test statistic (Mantel 1967, McCune and Mefford 1999) between a geographical distance matrix and

Exhibit B- Public Comment to PC

an ecological distance matrix (Villard et al. 1999). The ecological distance values were based on the dissimilarity in species composition between sites and were calculated by subtracting the Jaccard index of similarity (Magurran 1988) from 1. Probability values were calculated based on 5000 random permutations of one of the two matrices. Because the study areas in Boulder County were closer to each other than to any of the sites in Larimer County, we conducted the Mantel test twice, once with all sites included and the second time including only the Boulder County sites.

An indirect ordination technique, correspondence analysis (CA), was used to obtain a general overview of variation in avian community composition among sites. Environmental gradients are not studied directly in indirect ordination analyses, but rather are inferred from the species data. In CA, a reciprocal averaging algorithm orders species and sites along synthetic gradients or axes (ter Braak and Smilauer 1998). This method results in the maximum possible correlation between site and species scores along each axis, subject to the constraint that the axes are orthogonal (Gauch 1982). Thus, CA constructs a theoretical variable, represented by the *x*-axis, that best explains the species data and then, by the same process, constructs a second variable, represented by the *y*-axis, to explain residual variation (ter Braak 1995). Species abundances were log-transformed to counteract skewness (ter Braak 1986); because rare species can exert a strong influence on ordination results, we excluded species whose average relative abundance was <10.

We used canonical correspondence analysis (CCA), an extension of CA, to examine the relationship between bird community structure and measured environmental variables. CCA is a direct ordination technique because the axes are constrained to be linear combinations of designated environmental variables; the resulting diagram depicts the relationship between the abundance of individual species, study sites, and measured environmental gradients (ter Braak 1986, ter Braak and Prentice 1988). By comparing the results of CCA with those of CA, it is possible to evaluate the extent to which patterns in the species data can be explained by the environmental variables that have been measured. Congruent configurations indicate that the appropriate environmental variables have been measured (Økland 1996). Environmental variables were selected by stepwise forward-selection procedures (ter Braak and Smilauer 1998). Variables explaining a significant amount of variation, as determined by Monte Carlo permutation tests (199 random permutations of the samples in the species data), were included in the CCA analyses and the means of these variables are represented by the origin in the resulting diagram. Bird species abundances were transformed as in CA. Because our limited sample size could lead to low power in statistical tests, we used an α level of 0.10 to screen for significant effects in these and all subsequent analyses unless otherwise noted.

In addition to examining the overall relationship between patterns of habitat use by birds and environmental variables, we wished to assess the relative influence of landscape and local habitat measures on these patterns. Partial constrained ordinations allow one to determine the effect of one set of variables after removing the effect of a second set, the latter being treated as covariables (ter Braak 1998). We used partial CCA to partition the variation in the species abundance data into the fraction explained by local habitat measures alone, by landscape measures alone, the variation that can be related simultaneously to both sets of variables, and variation that cannot be explained by either set (Borcard et al. 1992, Økland and Eilertsen 1994, Økland 1999). This was accomplished by conducting four ordinations. The first CCA was constrained by significant local habitat variables as determined by the stepwise forward-selection procedures described above. In the second ordination, the process was repeated using only landscape variables. We then conducted a third CCA constrained by the significant local habitat variables with landscape measures identified in the second step treated as covariables. The roles of these two variable sets were reversed for the fourth ordination.

To identify potential mechanisms underlying patterns of riparian habitat use at our study sites, we classified bird species into functional groups based on a review of the literature (DeGraaf et al. 1985, Ehrlich et al. 1988, Andrews and Righter 1992, Kaufman 1996, Poole and Gill 1996, Kingery 1998). Functional groups were selected to reflect different aspects of each species' life history and ecological traits; hence, species simultaneously belonged to several groups. We first examined single-variable regressions to identify the environmental measure with the greatest explanatory power for each response. We then developed multiple-regression models using only local habitat variables to explain variation in total bird species richness and abundance, and the richness of each functional group. The variable list was customized for each group, depending on which habitat variables were relevant. Because the number of study sites was relatively small, we included no more than three variables per model to avoid overfitting. We examined all possible regression models and identified the "best" model on the basis of biological relevance, adjusted R^2, and a second-order variant of Akaike's Information Criterion (AIC; Akaike 1973) that corrects for small-sample bias (AIC_c; Hurvich and Tsai 1991, Burnham and Anderson 1998). AIC is an extension of likelihood theory and provides a robust and objective means for model selection. Although models with the minimum AIC_c value were considered "best," we also examined all models with $\Delta AIC_c \leq 2$ of the minimum because these are also viable alternatives (Burnham and Anderson 1998).

Exhibit B- Public Comment to PC

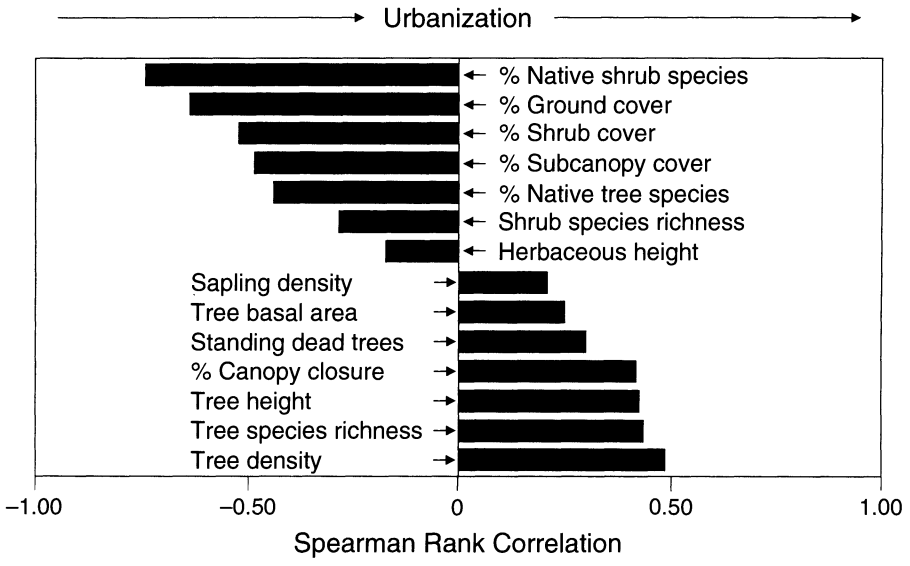

FIG. 3. Spearman rank correlations between the urbanization index and local habitat variables.

Once a local-habitat model was selected, we then regressed landscape measures against the residuals of the model to determine whether or not these terms explained a significant amount of the remaining variation. The variables URBAN, D1500 (buildings per hectare within 1500 m of a transect), D500, D100, D10, and WIDTH (width of the woody riparian zone) were regressed one-at-a-time; AGE_D10 (average age of buildings in D10) was also added to these models to see if additional variation could be explained. Again, the model with the minimum AIC_c was considered "best," with the provision that its AIC_c was at least 2 less than that of an intercept-only model. Failure to meet this last condition would essentially mean that the "best" model had no more explanatory power than a model that contained only the intercept.

RESULTS

Habitat measures

Our 16 study sites (east of Colorado Front Range, USA) represented a gradient of overall levels of human settlement (Fig. 2). Building densities at the broadest scale (within 1500 m of a transect, D1500) ranged from 374 buildings/ha at the C.U. (University of Colorado) site to <0.1 building/ha at the Vista View site. There were no buildings within 100 m of the transect at five study areas (Bobolink, Kaufman, South Vale, the Mine, and Vista View), although one of these (Bobolink) was essentially a suburban site. The average distance to 10 buildings ranged from 39 m (Louisville) to >2 km (Vista View).

Compared to undeveloped sites, urban and suburban areas have often been characterized by reduced vegetation structure and the predominance of nonnative trees and shrubs (Beissinger and Osborne 1982, Sharpe et al. 1986, Mills et al. 1989, Germaine et al. 1998). Similarly, we found a strong negative correlation between overall settlement intensity and native shrubs in riparian woodlands, as well as moderate inverse relationships with native trees, ground cover, overall shrub cover, and subcanopy cover (Fig. 3). Tree density, tree height, the number of tree species, and canopy closure in the riparian zone all tended to increase with development levels, reflecting an increase in nonnative species. There was also a positive correlation (albeit weak) between the density of standing dead trees and settlement intensity.

Bird community

Riparian habitats on the plains along Colorado's Front Range support a diverse assemblage of bird species. Over the three-year period we recorded 15 473 detections representing 95 species. We limit subsequent discussion to the 43 species that met our criteria for inclusion in analyses and are known to breed in lowland riparian areas in this region (Table 2; Appendix A; Andrews and Righter 1992, Kingery 1998). Many species were fairly widespread; 22 species occurred in over half the sites and 16 species were found in more than 75% of the areas (Fig. 4). It has been suggested that widespread species also tend to be more abundant than restricted species (Brown 1984, Wiens 1989, Gaston 1994). We observed this same general pattern, but there was considerable variation in mean abundance for species occupying the same number of sites. Three of the species that occurred at all sites were also the most abundant: the Common Grackle, the American Robin, and an exotic, the European Starling. The next two most abundant species, the House Wren and the Red-winged Blackbird, occurred at only 14 of the sites, whereas the Northern Flicker and Downy Woodpecker had noticeably lower abundances but were observed at 15 sites.

TABLE 2. Scientific names and species code of the 43 bird species included in analyses (following American Ornithologists' Union [1983] and Pyle [1997]); see Appendix A for the ecological and life-history traits of these species.

Scientific name	Common name	Species code
Columbia livia	Rock Dove	RODO
Zenaida macroura	Mourning Dove	MODO
Selasphorus platycercus	Broad-tailed Hummingbird	BTLH
Ceryle alcyon	Belted Kingfisher	BEKI
Colaptes auratus	Northern Flicker	NOFL
Picoides pubescens	Downy Woodpecker	DOWO
Contopus sordidulus	Western Wood Pewee	WEWP
Tryannus tyrannus	Eastern Kingbird	EAKI
T. verticalus	Western Kingbird	WEKI
Corvus brachyrhynchos	American Crow	AMCR
Cyanocitta cristata	Blue Jay	BLJA
Pica pica	Black-billed Magpie	BBMA
Poecile atricapilla	Black-capped Chickadee	BCCH
Troglodytes troglodytes	House Wren	HOWR
Turdus migratorius	American Robin	AMRO
Dumetella carolinensis	Gray Catbird	GRCA
Mimus polyglottus	Northern Mockingbird	NOMO
Toxostoma rufum	Brown Thrasher	BRTH
Bombycilla cedrorum	Cedar Waxwing	CEDW
Sturnus vulgaris	European Starling	EUST
Vireo gilvus	Warbling Vireo	WAVI
V. olivaceus	Red-eyed Vireo	REVI
Dendroica petechia	Yellow Warbler	YWAR
Geothlypis trichas	Common Yellowthroat	COYE
Icteria virens	Yellow-breasted Chat	YBCH
Guiraca caerulea	Blue Grosbeak	BLGR
Pheucticus melanocephalus	Black-headed Grosbeak	BHGR
Passerina amoena	Lazuli Bunting	LAZB
P. cyanea	Indigo Bunting	INBU
Chondestes grammacus	Lark Sparrow	LASP
Melospiza melodia	Song Sparrow	SOSP
Pipilo maculatus	Spotted Towhee	SPTO
Agelaius phoeniceus	Red-winged Blackbird	RWBL
Sturnella neglecta	Western Meadowlark	WEME
Euphagus cyanocephalus	Brewer's Blackbird	BRBL
Quiscalus quiscula	Common Grackle	COGR
Icterus spurius	Orchard Oriole	OROR
I. bullockii	Bullock's Oriole	BUOR
Molothrus ater	Brown-headed Cowbird	BHCO
Carduelis psaltria	Lesser Goldfinch	LEGO
C. tristis	American Goldfinch	AMGO
Carpodacus mexicanus	House Finch	HOFI
Passer domesticus	House Sparrow	HOSP

Note: All these bird species are known to breed in lowland riparian areas in the Colorado Front Range region (USA).

Mantel tests indicated that our study areas could be considered statistically independent. There was no significant spatial autocorrelation in bird community composition, whether all sites in both counties were considered ($P = 0.923$, $r = -0.173$) or when the Larimer County sites were excluded from the analysis ($P = 0.152$, $r = 0.138$). There was a negative relationship between overall levels of urbanization and bird species richness ($R^2 = 0.478$, $P = 0.008$) but the effect of urbanization on total avian abundance was not significant ($R^2 = 0.038$, $P = 0.469$).

The primary axis of variation in the correspondence analysis (CA), which accounted for 43.8% of the variation in species composition, segregated sites based on their level of urbanization (Fig. 5). Study areas with moderate or high levels of development (see Fig. 2) were clustered more tightly around this axis than were low-urbanization sites, although our most urban site, C.U., was an exception to this general pattern. Sites associated with low levels of settlement intensity were positioned along a narrow range of values on the primary axis, yet exhibited a substantial amount of variation along the secondary axis, which accounted for 15.7% of the variation in species composition.

The canonical correspondence analysis (CCA) (Fig. 6) revealed similar patterns to those described in the CA, suggesting that the important sources of variation had been captured by the selected environmental variables. Sites were arranged along the primary axis by urbanization levels, similar to the pattern in CA, and the percentage of variation in species composition explained by the first two axes (Table 3) was close to that

Exhibit B- Public Comment to PC

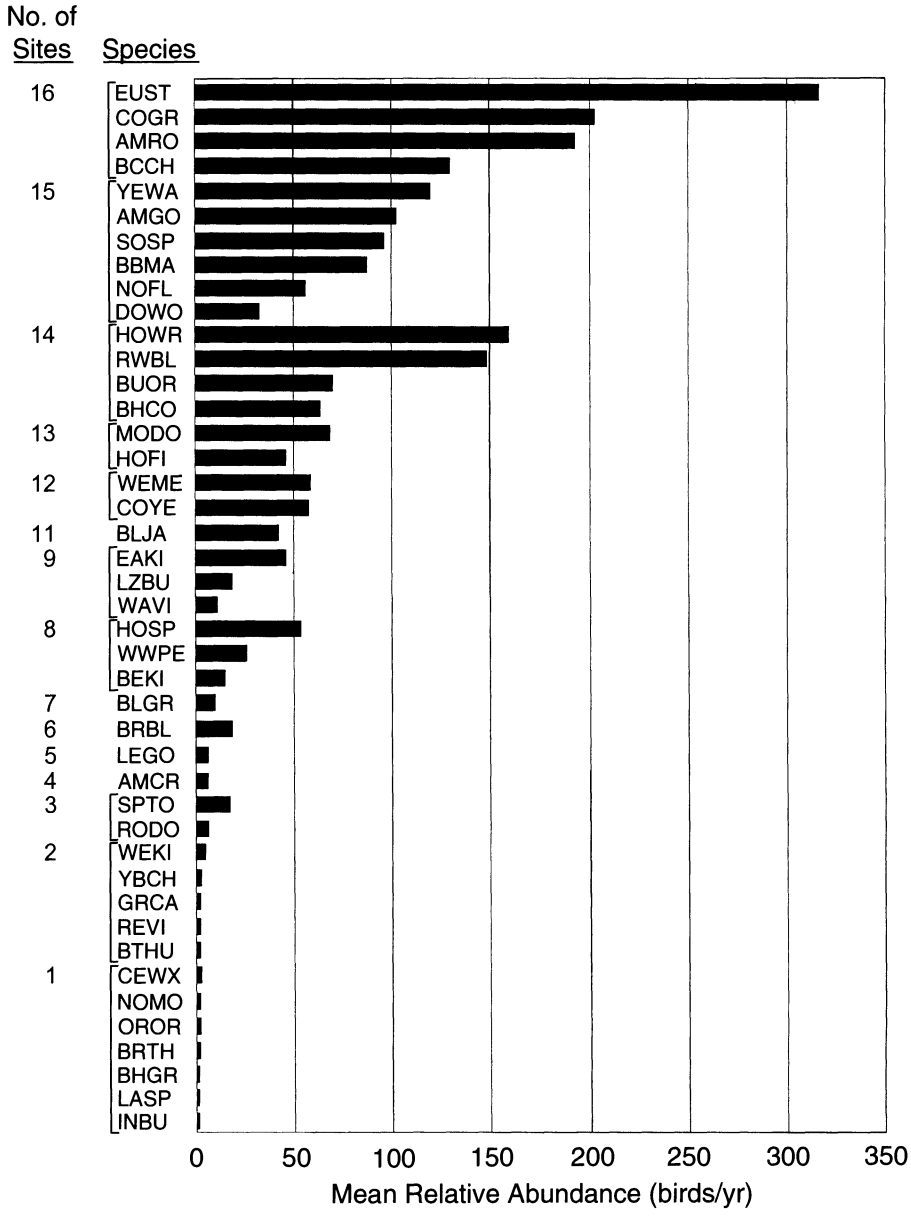

FIG. 4. Mean relative abundance (1995–1997) of bird species for all sites combined, and the number of sites at which they were observed. For each species, mean relative abundance was derived by summing the maximum abundance across all sites in each year and averaging over the three years. For species codes, see Table 2.

explained by the first two axes in CA. There were significant relationships between species composition and four environmental variables, two describing patterns of settlement and two describing vegetation structure. Both the first canonical axis and the overall relationship between species and environmental variables (all canonical axes) were significantly different from those derived from randomized data ($F = 6.775$ and $F = 4.133$, respectively; $P = 0.005$), based on Monte Carlo permutation tests. The primary axis had a strong, positive correlation with settlement intensity at the broadest scale that we considered, a strong negative correlation with the average distance to 10 buildings, and a moderate negative correlation with shrub cover. The secondary axis exhibited a somewhat stronger, positive relationship with shrub cover and a strong, negative correlation with the height of herbaceous vegetation (Table 3). Migrant and low-nesting species were generally associated with lower-than-average levels of development, whereas the abundance of residents and cavity-nesters increased with increasing urbanization (Fig. 7). High-nesting species were more evenly distributed along the primary axis.

Local habitat variables alone explained 23.3% of the variation in bird species composition, whereas landscape measures alone explained 12.3%. The amount of

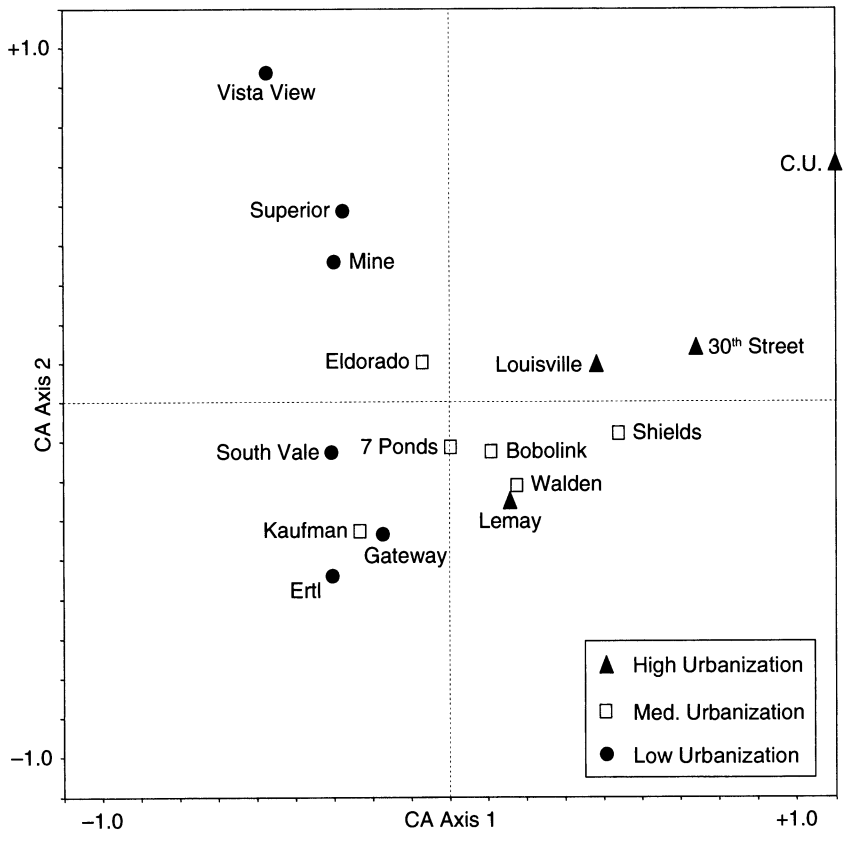

FIG. 5. Locations of site scores of high-, medium-, and low-urbanization sites in the space defined by a correspondence analysis (CA) of bird community composition during the avian breeding season, 1995–1997.

variation that could not be partitioned, but was shared between the two sets of variables was 29.2%. These findings suggest that the avian community and local habitat conditions were both influenced by the intensity of settlement in the surrounding landscape. The amount of unexplained variation (35.2%) was not unusually high, considering the nature of community data (ter Braak 1986), and was attributable either to unmeasured variables or to lack of fit of the data to the model (Økland 1999).

Single-variable regression models explained a fairly high percentage of the variation in habitat use for a number of the guilds that we examined (Table 4). Rare species generally occurred only at sites with moderate or low levels of settlement intensity. Indeed, there was a negative response to settlement intensity for most groups, but there was a strong positive relationship between the number of resident and cavity-nesting species and proximity to the nearest buildings. These relationships were also unique, in that the variable with the greatest explanatory power for these guilds reflected patterns of settlement at the finest scale that we examined, in contrast to the majority of models, which emphasized building densities at the broadest scale. Whereas the index of urbanization (URBAN) tended to weight development patterns at different scales equally, D1500 captured patterns at broad scales and this variable had the greatest explanatory power in over half of the single-variable models. We found a strong negative relationship between D1500 and the richness of neotropical-migratory and low-nesting species, as well as the richness of short-distance migrants, insectivores, generalist or high-foraging species, and species that foraged either high or low on insects and seeds (Table 4).

There were no a priori reasons for assuming that resident and migrant species would respond differently to variation in local habitat features, so we did not include these groups in our two-stage regression analyses. For nesting and foraging guilds, the amount of variation explained by models that included only local habitat variables ranged from 14.8%, for the number of omnivorous species, to 60.5%, for insectivorous species (Table 5). Landscape terms were no better than intercept-only models in explaining residual variation from regressions of local habitat variables in half of the cases that we examined (Table 6). When such variables did improve the models, the emphasis was on measures of settlement intensity at the finest scales that we examined and, in these cases, increasing levels of development near riparian habitats had adverse effects on low-nesting and low-foraging species. Building age

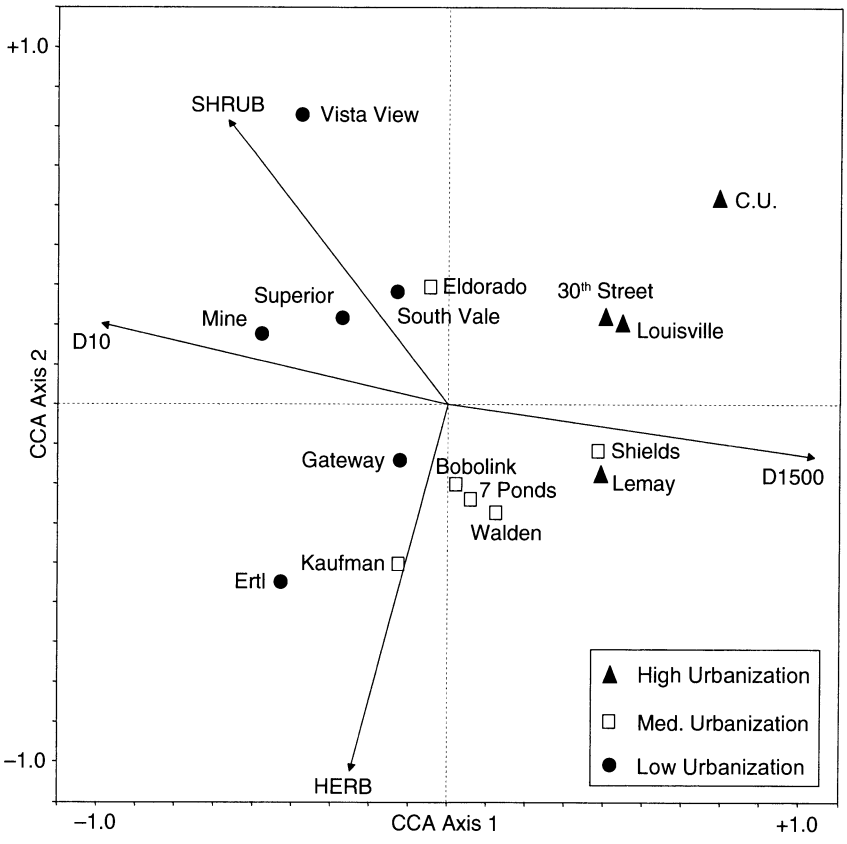

FIG. 6. Locations of site scores of high-, medium-, and low-urbanization sites in the space defined by a canonical correspondence analysis (CCA) of bird community composition during the avian breeding season, 1995–1997. Environmental variables are depicted as vectors, and the rank of a site with respect to a given variable is approximated by projecting the site point in the diagram perpendicularly onto the environmental vector (see Table 1 for explanations of environmental-variable codes). The lengths of the arrows indicate the relative importance of each environmental variable in the model, and the direction of each arrow indicates how well the environmental variable is correlated with each axis. The origin (0,0) is the mean of each environmental variable, so that transects projecting onto the axis of but on the side opposite the arrow are inferred to exhibit a lower-than-average value of the variable.

was also prominent in these models and had a negative coefficient in all cases (Appendix B).

Because only half of our study sites were associated with paved trails, we analyzed the effect of trail use separately. Human activity at these eight sites primarily included walking, jogging, and bicycling. Trail use reached its maximum in the heart of the city of Boulder near the University of Colorado, where trail use averaged 141 people/h, and was least at Walden, where average trail use was less than 1 person/h. The correlation between levels of human activity and overall settlement intensity was not as strong as might be expected ($R^2 = 0.605$). Trail use at Bobolink, for example, averaged 33 people/h, although this site was associated with lower levels of urbanization (Fig. 2) than was Walden, Louisville (mean trail use = 17 people/h), or 7 Ponds (mean trail use = 14 people/h). We reasoned that birds most likely to be affected by human activity

TABLE 3. Summary statistics for the first two axes in canonical correspondence analysis (CCA) and correlations of these axes with environmental variables that were used to constrain the ordination.

Statistic	CCA axis 1	CCA axis 2
Eigenvalues	0.152	0.052
Cumulative variance of species data	0.381	0.511

on trails would nest or forage on the ground, and focused our analyses on these guilds. There was a negative effect of trail use on all guilds that we examined (Table 7). Although the relationship between trail use and the number of low-nesting species was not particularly strong, the intensity of trail use explained >60% of the variation in the occurrence of low-foraging species and nearly 90% of the variation in habitat use by species that forage on the ground for insects or seeds (Table 7).

DISCUSSION

Clearly, human settlement had a profound impact on riparian bird communities at the sites that we studied. Species richness declined as the level of development on surrounding lands increased, similar to the findings reported in most investigations of urbanization and its effects on birds. Most of the variation in community composition was accounted for by measures of settlement intensity, and the best single variable, in terms

of accounting for variation in habitat use by birds, was the density of buildings within 1500 m of transects.

Although the width of streamside woodlands strongly influenced bird community structure and composition in other studies, we did not find this to be the case. Many of those investigations focused on riparian forests that had been reduced by agricultural or silvicultural activities (e.g., Keller et al. 1993, Darveau et al. 1995, Hodges and Krementz 1996). On the western Great Plains, groves of trees bordering smaller streams tend to be relatively narrow, even in the absence of timber harvest or crop production. It has been suggested that edge effects, of the sort often associated with small or narrow woodlands, may not be as pronounced in the western United States compared to the eastern part of the country because many western habitats, including riparian areas, are naturally patchy due to a combination of aridity, topography, and frequent disturbance (Finch 1991, Tewksbury et al. 1998, Saab 1999). The influence of width in this study may also have been muted by the profound and varied development nearby.

In these riparian habitats much of the impact of human settlement on bird communities was indirectly expressed through changes in local habitat features. Modification of vegetation structure and composition in urbanizing environments has frequently been identified as a primary reason that such habitats are less suitable for many avian species (Beissinger and Osborne 1982, Mills et al. 1989, Jokimaki and Suhonen 1993, Rolando et al. 1997, Germaine et al. 1998). Even though our study sites were relatively free of buildings and paved surfaces (except trails), we observed declines in native trees and shrubs, a more open understory, reduced ground cover, higher tree density, and greater canopy closure as development intensified in the surrounding landscape. These differences explained a substantial portion of the variation in patterns of avian habitat use; indeed, when such variation was partitioned in the partial CCA, local habitat measures explained a slightly greater percentage than did landscape variables.

Of all the changes to riparian-habitat features associated with increased development, reductions in understory vegetation and herbaceous ground cover were particularly strong determinants of bird community structure. The declines in low-nesting and low-foraging species that we observed were not surprising under such circumstances. For insectivorous species and species that forage low for insects or seeds, the best local habitat models also included a term for native vegetation, lending support to the notion that native trees and shrubs may be superior to exotic vegetation in terms of providing food resources for these birds (Southwood 1961, Beissinger and Osborne 1982). Nonnative plants, on the other hand, appear more likely to benefit omnivorous species, at least regarding dietary needs (Reichard et al. 2001).

The age of development emerged as an important consideration in accounting for variation in habitat use by birds, once the effects of local habitat features were removed statistically. Others have noted compositional changes in avian assemblages over time in developed areas (Guthrie 1974, Walcott 1974, Aldrich and Coffin 1980, Munyenyembe et al. 1989), and have generally attributed this phenomenon to temporal changes in habitat structure. There was an inverse relationship between building age and habitat use for several of the guilds that we examined, which may have resulted from temporal changes in features that we did not measure or from lagged responses to habitat alteration for these species.

Residual variation in habitat occupancy was better explained by fine-scale patterns of settlement, as measured by D10, than by development over broad scales

(D1500). Both variables were shown to be significant in the multivariate analyses. Together, these results imply that although alterations to riparian vegetation were more likely to be found near urban and suburban areas, the proximity of riparian habitats to houses adversely affected some bird species even where settlement occurred at lower densities. This was particularly true for species that nested in shrubs or on the ground and for species that foraged low for insects or seeds. These were the same functional groups that were most affected by high levels of trail use, suggesting that riparian woodlands near houses may experience more human activity. Birds that nest or forage near or on the ground are also more likely to be disturbed by free-ranging domestic pets, and the incidence of such disturbance is likely to be greater near places where people live (Weber 1975, Rubin and Beck 1982, Warner 1985).

One way to mitigate the adverse effects of human settlement close to riverine habitats, especially in the early stages of development, may be to set aside parcels of adjacent land as buffers. Although we cannot recommend an exact buffer distance on the basis of this study, one alternative would be to designate buffers to include the area historically comprising the floodplain. Aside from reducing the pressures of nearby settlement on riparian birds, this arrangement would give land managers more latitude in restoring the flow variability and channel movement that is characteristic of meandering rivers (Auble et al. 1997, Richter and Richter 2000) but may be undesirable in close proximity to development. Such movement is essential to the formation of the seed beds necessary for regeneration of cottonwood and other riparian species native to the streams of the Colorado Piedmont (Miller et al. 1995, Friedman et al. 1996*b*).

Periodic flooding may also result in the more-open canopies typical of cottonwood stands, thus providing an additional benefit to some riparian birds. The closed-canopy riparian woodlands that increasingly dominate river terraces in this region likely contribute to conditions that are unsuitable for birds dependent on understory vegetation. Furthermore, our analyses have shown that even species that nest or forage in the canopy tend to decline with increases in tree density and more continuous cover. This apparent relationship may stem, in part, from negative effects of development on some avian species (given the positive correlation between settelment intensity and both tree density and canopy cover), but it also reflects the preference of some species for more-open stands. This latter group includes birds with broad distributions, such as the Warbling Vireo (Gardali and Ballard 2000), as well as species such as the Bullock's Oriole (Rising and Williams 1999) or Western Kingbird (Gamble and Bergin 1996) whose nesting or foraging habits may be adapted to the open canopies that typified riverine habitats in the western United States prior to settlement. Where the restoration of open-canopied cottonwood stands by flooding is undesirable or impracticable (e.g., where development already borders the riparian zone), it may be possible to employ methods used to mimic the effects of floods by removing exotic trees and shrubs and inducing the establishment of native species (Friedman et al. 1995).

Even if vegetation structure and composition are restored, however, the findings of this study suggest that some species may avoid riparian areas that are associated with high levels of human activity. Several birds that forage on or near the ground, such as American Crows, Black-billed Magpies, European Starlings, and Common Grackles, are quite tolerant of human activity and were present even at sites with heavily used trails; these species are omnivorous and the dietary rewards of foraging in close proximity to people may outweigh any disadvantages. Our data suggest that this is not the case for many other low-foraging species, particularly those whose diet is restricted to insects or seeds. Still, it is unreasonable to expect that people can be excluded from all of these areas, nor is this necessarily desirable. The benefits to conservation of excluding human visitors from such places must be weighed against the value derived from people being able to experience nature close to home (Miller and Hobbs 2002). Nonetheless, it is advisable to keep at least some riparian habitats free of recreational trails so that they may serve

Exhibit B- Public Comment to PC

as baselines against which the effects of human activity can be measured and mitigated.

Overall, there is a lack of reliable information on the ways that human activities and patterns of development affect birds and other components of biodiversity. Although there is abundant advice on ways to manage greenways and remnants of native habitats that are proximate to human settlement (Smith and Hellmund 1993, Arendt 1996, Duerkson et al. 1997), much of this information has been derived from island biogeography theory and would be better viewed as testable hypotheses than as established truth (Marzluff 2001, Miller and Hobbs 2002). To go beyond such prescriptions, it will be necessary for conservation scientists to allocate greater research effort to areas where people live. Community, guild, and single-species investigation should be viewed as complementary approaches to studying the effects of settlement on native species with the ultimate goal of providing empirically based guidelines to policy makers and land-use planners.

Acknowledgments

For assisting with bird surveys we thank Christian Hagen, Janet Jorgensen, Joe LaFleur, Soley Snyder, and, above all, Scott Severs. For logistical and technical assistance we appreciate the help of Jon Osborne (BOS), and especially Clint Miller (BOS) and Michael Sanders (BCOS). We also are indebted to Mike Scott (U.S.G.S. Midcontinent Ecological Science Center) for advice regarding our methods for quantifying vegetation features. The Van Horne/Wiens laboratory provided much stimulating discussion of the ideas presented in this paper, and we are particularly grateful to Brandon Bestelmeyer and Jennifer Fraterrigo for valued advice regarding multivariate analyses. Thanks to Tom Sisk for his insights and editorial guidance, and to Anna Pidgeon and two anonymous reviewers for helpful comments on earlier drafts of this manuscript. Funding for our research was generously provided by the City of Boulder Open Space Department (BOS), the Colorado Division of Wildlife, Boulder County Parks and Open Space (BCOS), the Graduate Degree Program in Ecology at Colorado State University, the City of Fort Collins Natural Resources Department, and the Boulder County Nature Association.

Insect conservation

ABSTRACT

Insects around the world are rapidly declining. Concerns over what this loss means for food security and ecological communities have compelled a growing number of researchers to search for the key drivers behind the declines. Habitat loss, pesticide use, invasive species, and climate change all have likely played a role, but we posit here that artificial light at night (ALAN) is another important—but often overlooked—bringer of the insect apocalypse. We first discuss the history and extent of ALAN, and then present evidence that ALAN has led to insect declines through its interference with the development, movement, foraging, and reproductive success of diverse insect species, as well as its positive effect on insectivore predation. We conclude with a discussion of how artificial lights can be tuned to reduce their impact on vulnerable populations. ALAN is unique among anthropogenic habitat disturbances in that it is fairly easy to ameliorate, and leaves behind no residual effects. Greater recognition of the ways in which ALAN affects insects can help conservationists reduce or eliminate one of the major drivers of insect declines.

1. Introduction

Over the last two decades, researchers have uncovered steep declines in insect diversity and biomass (Dirzo et al., 2014; Potts et al., 2010) across geographically distinct areas including Germany (Hallmann et al., 2017), the Netherlands (van Langevelde et al., 2018; van Strien et al., 2019), Sweden (Franzén and Johannesson, 2007), the British Isles (Powney et al., 2019; Shortall et al., 2009; Wilson et al., 2018), Puerto Rico (Lister and Garcia, 2018), and Costa Rica (Janzen and Hallwachs, 2019). This alleged "insect apocalypse" (Jarvis, 2018) has generated an appropriate amount of public concern: insects are a critical component of all terrestrial and freshwater food webs (Baxter et al., 2005; van Veen et al., 2006) and provide important ecosystem services (Schowalter et al., 2018). Their absence would have devastating consequences for life on this planet. If insect decline is indeed a global phenomenon (see Wagner, 2019), the question then becomes: What is the problem, and how can we best address it? One recent review of insect decline has sought to identify the main causes by ranking potential drivers in order of their frequency of mention within relevant literature (Sánchez-Bayo and Wyckhuys, 2019). The authors found, as indeed have we, that habitat loss, chemical pollution (especially pesticide use), invasive species, and climate change are the most well-described threats to insect persistence. However, we do not agree that relative degree of scientific consideration reflects importance in this case. Instead we posit that "diurnal bias"—a preference among ecologists for studying daytime phenomena (Gaston, 2019)—has led insect conservationists to overlook another widespread habitat disturbance, pollutant, and method of insect control: artificial light at night (ALAN).

Although discrete sources of anthropogenic light have been used to kill insects since *circa* 60 CE (Beavis, 1995), the modern phenomenon of ecological light pollution began in earnest with the invention of the arc lamp in the early 1800s (Dillon and Dillon, 2002; Saunders, 1887). Soon after, dedicated "light traps" were adopted as a common method of pest control (U.S. Patent, 4808), and are indeed still used for this purpose today (Johansen et al., 2011; Pawson et al., 2009; Shimoda and Honda, 2013); around the 1950s, light traps became popular among entomologists for use in surveying insect biodiversity (Leather, 2015). More recently, as lighting technology has advanced and the cost per unit of brightness declined, both the intensity and quantity of artificial light installations have increased worldwide (Kyba, 2018; Kyba et al.,

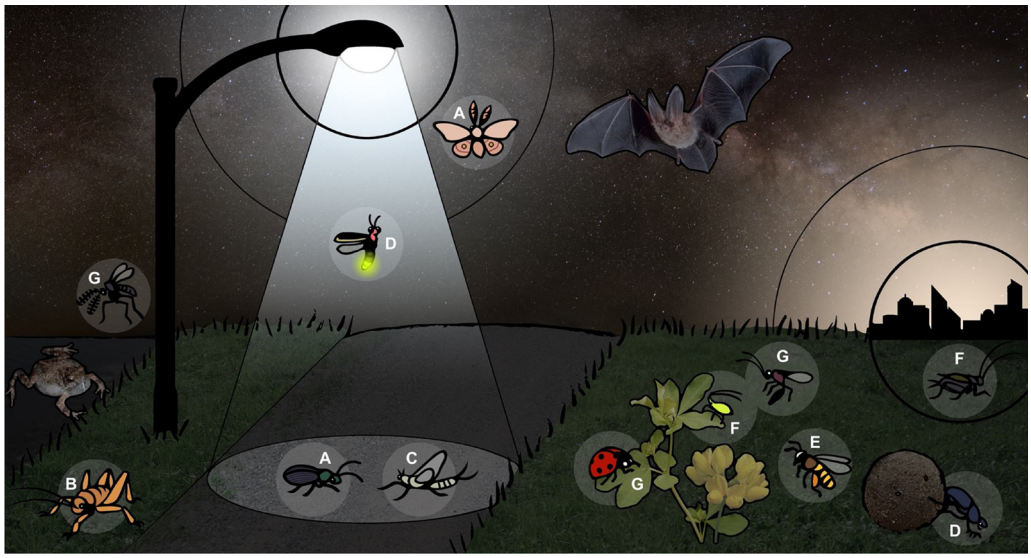

Fig. 1. Both local sources of artificial light (**left**) and diffuse skyglow (**right**) can impact the physiology, behavior, and fitness of insects. Positively phototactic insects, including macromoths and beetles, exhibit a "fatal attraction" to ALAN (**A**), while negatively phototactic insects such as weta avoid it (**B**). ALAN also amplifies polarized light pollution, causing mayflies and other aquatic insects to oviposit on non-aquatic flat surfaces (**C**). ALAN obscures natural nocturnal light sources (**D**), including the astronomical cues used by dung beetles to navigate and the bioluminescent signals produced by fireflies and other insects, with consequences for foraging and reproductive success in these species. In the short term, ALAN can alter circadian patterns of activity and rest (*E*), causing diurnal pollinators and insectivores to extend their foraging bouts into the evening, while fully nocturnal insects delay their nightly emergence. Over the long term, these repeated perturbations have been shown to alter the development and phenology of crickets and aphids (**F**). The resulting phenological mismatches between host plants, predators, and prey will have cascading effects on pollination success, host-parasite interactions, and eventually entire food webs (**G**). 2017; Tsao et al., 2010). Modern light pollution is no longer confined to urban centers, but radiates outwards through the atmosphere and along road networks that run into or around otherwise pristine areas (Gaston et al., 2015; Gaston and Holt, 2018; Guetté et al., 2018). Since 1992, levels of light pollution have doubled in high biodiversity areas, and are likely to continue to rise (Koen et al., 2018; Kyba et al., 2017). By 2014, over 23% of the land surface of the planet experienced artificially elevated levels of night sky brightness (Falchi et al., 2016); by comparison, agricultural crops cover approximately 12% (FAO, 2012). Insect conservationists now frequently lament, as do we, the dearth of insects to be found swarming around artificial lights (*e.g.* Janzen and Hallwachs, 2019), yet rarely consider that the lights themselves may be an issue.

Artificial light at night is a potent evolutionary trap (Schlaepfer et al., 2002; Altermatt and Ebert, 2016; Hopkins et al., 2018). Most anthropogenic disturbances have natural analogs: the climate has warmed before, habitats have fragmented, species have invaded new ranges, and new pesticides (also known as plant defenses) have been developed. Yet for all of evolutionary time, the daily cycle of light and dark, the lunar cycle, and the annual cycle of the seasons have all remained constant. Until now (Altermatt and Ebert, 2016), insects have had no cause to evolve any relevant adaptations to ALAN. And so some species retreat from streetlights (Farnworth et al., 2018) while others for unclear reasons perch beneath them, stunned, or circle around them until claimed by injury, exhaustion, or predation (Frank, 1988; Owens and Lewis, 2018). While the total fitness impact of an artificial light source will depend on its intensity, direction, spectral distribution (Elvidge et al., 2010), and flicker rate (Inger et al., 2014), as well as the time of day and structure of nearby surfaces (Horváth et al., 2009; Szaz et al., 2015), the light output of most common fixtures is more than enough to radically disturb the entire habitat of small-bodied animals such as insects. Insects that manage to escape the cone of light beneath a fixture can still be affected by skyglow, which emanates far beyond urban centers at levels sufficient to obscure or alter vital environmental cues including polarized moonlight, starlight, moon phase, and daylength (Davies et al., 2013b; Kyba et al., 2011a; 2011b).

A growing body of research demonstrates that ALAN can impact the fitness of plants and animals (Bennie et al., 2016; Gaston et al., 2013), and more recent reviews have catalogued its broadscale effects on insects in particular (Desouhant et al., 2019; Grubisic et al., 2018; Owens and Lewis, 2018; Seymoure, 2018). Some estimates suggest that one third of insects attracted to stationary artificial light sources die before morning, either through exhaustion or predation (Eisenbeis, 2006; Frank, 2006; Yoon et al., 2010); insects attracted to vehicle headlights likely die immediately (Frank, 2006; Gaston and Holt, 2018). This "fatal attraction" has been estimated to result in 100 billion insect deaths per summer in Germany (Eisenbeis and Hänel 2009) and had the potential to swiftly eliminate isolated populations of *Hydraecia petasitis* moths in Finland (Väisänen and Hublin, 1983; see also Cantelo et al., 1972). Insects that escape immediate death may still become trapped in a "light sink," unable to engage in behaviors vital to fitness (van Langevelde et al., 2017). The potential for individual deaths to compound into large-scale declines (Kokko and Sutherland, 2001) has been borne out by the results of a 30 year survey of Dutch macromoths (van Langevelde et al., 2018), during which time positively phototactic and nocturnal species underwent steeper declines than diurnal species not attracted to light. A similar survey of macromoths in the UK and Ireland found greater losses at light polluted sites (Wilson et al., 2018), even after controlling for urbanization (Bates et al., 2014), and that nocturnal species once again underwent disproportionate declines (Coulthard et al., 2019). However, a small number of studies have found disproportionate declines in day-active insect species instead (Franzén and Johannesson, 2007).

One complicating factor is the fact that temporal niche partitioning between diurnal and nocturnal species has become less extreme in response to human activity (Ditchkoff et al., 2006; Gaynor et al., 2018; Levy et al., 2019). At the same time, deforestation and habitat fragmentation have reduced the availability of dark refuges for all species (reviewed in Seymoure, 2018). If ALAN is contributing to a worldwide decline of entomofauna, insects that occupy open habitats should be more threatened than those that occupy closed habitats, and terrestrial and aquatic species more so than fossorial species—as indeed they are (Coulthard et al., 2019; Fox et al., 2014; Franzén and Johannesson, 2007; Guerra Alonso et al., 2019; Paukkunen et al., 2018; Potocký et al., 2018; Sánchez-Bayo and Wyckhuys, 2019; van Strien et al., 2019), although few have viewed these trends with light in mind.

We argue here that ALAN impacts the vital biological functions of nocturnal and diurnal insects alike in ways both related and unrelated to flight-to-light behavior (Fig. 1). ALAN can cause immediate behavioral change, or more complex behavioral expression of physiological changes induced by external timekeeping signals (*i.e.Zeitgebers*); both

Exhibit B- Public Comment to PC

Table 1
Examples of the effects of ALAN on vital fitness-related behaviors in diverse insect taxa. **RESPONSE to ALAN** adapted from Owens and Lewis (2018): positive and negative phototaxis refer to impulsive movement towards or away from a light source; spatial disorientation connotes an impaired ability to navigate due to altered environmental cues; temporal disorientation arises from the disruption of circadian rhythms; altered recognition refers to the impact of additional and/or spectrally unnatural illumination on the perception of visual cues; indirect effects are the bottom-up or top-down effects of ALAN on food plants, prey, hosts, or natural enemies. Citations followed by an asterik have directly shown the described impact of ALAN on insect fitness; while other citations show a clear potential for the described impact, ALAN was not a focus of these studies.

BEHAVIOR	RESPONSE to ALAN	FITNESS COST	EXAMPLE TAXON	citation(s)
development	*temporal disorientation*	juvenile insects exposed to ALAN experience accelerated, slowed, or impaired growth	field crickets	Durrant et al., 2018*
movement	*positive phototaxis*	insects caught in the orbit of artificial lights are trapped, unable to advance or retreat	macromoths	Somers-Yeates et al., 2013*
	negative phototaxis	insects that avoid moving through or around lit areas are unable to effectively disperse	aquatic insects	Perkin et al., 2014a,b*
	spatial disorientation	ALAN obscures orientational cues such as the moon or stars, and thus impedes navigation	sand hoppers	Ugolini et al., 2005
	temporal disorientation	ambient illumination inhibits nocturnal activity, including locomotion, in night-active insects	leafhoppers	Shi et al., 2017*
foraging	*positive phototaxis*	insects trapped around or under artificial lights do not engage in normal foraging behavior	insect pollinators	Knop et al., 2017*
	negative phototaxis	insects that avoid lit areas are unable to capitalize on the foraging opportunites within	tree and cave weta	Farnworth et al., 2018*
	temporal disorientation	insects that shift to new temporal niches are physiologically unprepared to forage therein	dung beetles	Caveney et al., 1995
	altered recognition	unnatural spectra obscure the visual signals insects use to identify food sources or hosts	parasitoid wasps	Cochard et al., 2017*
	indirect effects	the impact of ALAN on plant growth decreases food availability for herbivorous insects	pea aphids	Bennie et al., 2018a*
reproduction	*sex-biased phototaxis*	disproportionate attraction to ALAN skews the effective sex ratio in insect populations	winter moths	van Geffen et al., 2015b*
	temporal disorientation	physiological effects of ALAN lead to sterility or decreased fecundity of adult reproductives	fruit flies	McLay et al., 2017*
	altered recognition	ALAN obscures or masks the visual signals that insects use to find and court potential mates	firefly beetles	reviewed in Owens and Lewis, 2018*
predation	*positive phototaxis*	insects trapped around or under artificial lights are vulnerable to exploitation by predators	giant water bugs	Yoon et al., 2010*
	altered recognition	unnatural spectra obscure aposematic coloration and/or camouflage in prey insects	*Heliconius* butterflies	Seymoure, 2016*
	indirect effects	increased illumination allows visually guided insectivores to hunt more effectively	lady beetle prey	Miller et al., 2017*

changes may be triggered by certain wavelengths of light only. ALAN can also interact with other anthropogenic disturbances such as climate change or noise pollution in complex ways (McMahon et al., 2017; Miller et al., 2017; Walker et al., 2019). For example, pollinator insects pushed from agricultural fields to road verges by pesticides will be more exposed to streetlights and vehicle headlights (Phillips et al., 2019). Impacts on single species will have downstream effects on other members of the food web, the outcome of which can be extremely difficult to predict (Sanders and Gaston, 2018). To keep this review in scope, we focus here on the way in which ALAN impacts several vital fitness-related behaviors of insects on the individual level. We also discuss some of the potential consequences for insect populations, many of which are just now becoming apparent (Table 1)

2. Movement

Large-scale seasonal migration and small-scale daily movements in pursuit of food or habitat both play a crucial role in maintaining the fitness of insect species (Hammock and Wetzel, 2013; Rankin, 1985), and are necessary to the recovery of at-risk metapopulations (Schultz et al., 2019). The attractive and repulsive effects of discrete sources of artificial light are well known to prevent natural patterns of movement (Allema et al., 2012) and alter the distribution of insects in a landscape away from the evolved baseline (Degen et al., 2016; Macgregor et al., 2017; Manfrin et al., 2017; Manríquez et al., 2019; Šustek, 1999; but see Grenis et al., 2015; White, 2018). The fitness repercussions of "fatal attraction" are described above, and not covered in any more detail here. Lines of closely spaced streetlights, as are found along most major roads, can also act as a barrier to the movement of positively and negatively phototactic species alike (Degen et al., 2016; Eisenbeis, 2006), effectively fragmenting major swaths of otherwise suitable habitat. For example, the drift rates of negatively phototactic immature aquatic insects are significantly lower in the presence of riverside lighting (Henn et al., 2014; Perkin et al., 2014a), and their adult forms prevented from moving between streams or colonizing new streams (Perkin et al., 2014b).

Nocturnal light signals serve an important role in the orientation of many insect species (reviewed in Foster et al., 2018; Owens and Lewis, 2018). For example, *Scarabaeus satyrus* dung beetles use the stars and dim patterns of polarized starlight to efficiently navigate away from dung piles (Dacke et al., 2013), while *Talitrus saltator* sand hoppers maintain a route parallel to the shoreline on their nightly excursions by moving with respect to the moon (Ugolini et al., 2005). These signals can be partially or fully obscured in light polluted habitats (Davies et al., 2013b; Kyba et al., 2011a; 2011b); lunar signals also face competition from overhead sources of artificial light (*e.g.* streetlights; Sotthibandhu and Baker, 1979). Upwelling light (*e.g.* path lighting) can further disorient flying insects such as wasps and dragonflies that maintain a horizontal position in the air by keeping the more illuminated half of their visual field always overhead (Berry et al., 2011; Goodman, 1965). In fact, both upwelling and downwelling artificial lights are intentionally used in agriculture to suppress the movement and abundance of pest insects (Loughlin, 2014; Miller et al., 2015; Shi et al., 2017; Shimoda and Honda, 2013), yet we wonder why more desirable species have stopped visiting our increasingly illuminated backyards.

3. Foraging

Artificial light at night can interfere with efficient acquisition of food, vital to the developmental and reproductive success of insects (Wenninger and Landolt, 2011), in several ways. Diurnal and crepuscular insects that move their foraging activity into the "night light niche" (Garber, 1978) must endure cold stress (Caveney et al., 1995; Urbanski et al., 2012), while nocturnal insects that continue to forage alongside may experience reduced rates of growth due to increased

Exhibit B- Public Comment to PC

competition and/or what is effectively a reduction in their spatial niche (Duarte et al., 2019). Insects avoid profitable foraging patches under illumination due to perceived (Skutelsky, 1996) or actual increases in their risk of predation by invertebrate (Heiling, 1999; Miller et al., 2017), avian (Dwyer et al., 2013, and mammalian insectivores (Rydell, 2006). For example, the reduced presence of tree (*Hemideina thoracica*) and cave (Rhaphidophoridae sp.) weta at artificially illuminated sites is thought to be in avoidance of geckos and other nocturnal predators (Farnworth et al., 2018).

Nocturnal insects that postpone foraging until their habitat is sufficiently dark (Dreisig, 1980) are likely to be negatively affected by a reduction in temporal niche (Tierney et al., 2017). For example, in laboratory environments exposure to dim ALAN is linked to less frequent feeding in several moth species (van Langevelde et al., 2017). *Orchestoidea tuberculata* sand hoppers consume less food under ALAN, and grow less (Luarte et al., 2016). Tasmanian cave glow-worms (*Arachnocampa tasmaniensis*) extinguish their bioluminescent lures when exposed to artificial light (Merritt and Clarke, 2013), and could therefore starve under constant cave lighting. In the field, pollinators that delay their nightly forage due to the day lengthening effects of skyglow are likely to become desynchronized from their food plants, especially in cases where flower opening is cued by temperature instead of light (Seymoure, 2018; Somanathan et al., 2008; van Doorn and Van Meeteren, 2003). Differences in the environmental cues used to guide development of insects and their food plants result in increasingly exaggerated desynchronization over the course of the growing season (Forrest and Thomson, 2011; Laube et al., 2014) and decrease pollinator effectiveness (Rafferty and Ives, 2012).

Artificial light at night might also cause unexpected trophic cascades through its effects on plants (Bennie et al., 2016; Schroer et al., 2019) or insect natural enemies (see Predation). For example, ALAN stunts the growth of larval cutworms (*Apamea sordens*) by increasing the cuticle toughness of their smooth brome host plants (Grenis and Murphy, 2018). By decreasing the flower abundance of pea plants (Bennie et al., 2018a, 2016), ALAN has also been shown to impact pea aphids (*Acyrthosiphon pisum*) (Bennie et al., 2018b) as well as the parasitoid wasps (*Aphidius* megourae; *Lysiphlebus fabarum* and *Aphidius ervi*) that prey upon them (Sanders et al., 2018, 2015). When food is available, and foraging insects present and active, ALAN can still impact foraging success. Unnatural spectra may obscure the particular visual cues that tobacco hornworm moths (*Manduca sexta*) and other insects use to identify flowers, plants, or prey (Cutler et al., 1995; Davies et al., 2013a; Streinzer et al., 2019). For example, monochromatic red illumination has been found to decrease the rate at which parasitoid wasps encounter their pea aphid hosts (Cochard et al., 2017; 2019a, 2019b). Finally, ALAN can incapacitate positively phototactic insects such as giant water bugs (*Lethocerus deyrolli;*Choi et al., 2009; Yoon et al., 2010) and macromoths (Somers-Yeates et al., 2013) that might otherwise spend the evening engaged in foraging activities, including nocturnal pollination (Knop et al., 2017; Macgregor et al., 2015).

4. Reproduction

ALAN can delay or eliminate the window of time during which night-active insects engage in courtship and mating (Dreisig, 1975; Lall, 1993; Li et al., 2019). The corn earworm moth (*Helicoverpa zea*) never mates when ambient light levels are above that produced by a quarter moon (Agee, 1969), and other strictly nocturnal insects are likely similarly sensitive, but understudied. The insects that manage to maintain a nightly routine within light polluted habitats may still have difficulty locating suitable mates. Firefly beetles are one unique example: the courtship of most fireflies requires the exchange of bioluminescent signals, which are obscured or inhibited by artificial illumination (Firebaugh and Haynes, 2016; Owens et al., 2018) to the point that receptive *Lampyris noctiluca* females perched underneath streetlights are never visited by male conspecifics (Ineichen and Rüttimann, 2012). In certain cases, these females must compete with the streetlights to attract males (Bek, 2015). Other insects may see but be unable to recognize conspecifics: male crepuscular horned beetles (*Coprophanaeus lancifer*) have a coloration that reflects the purplish light of dusk, and will be less apparent to females when lit by artificial light of a different spectral composition (Davies et al., 2013a; Kelley et al., 2019; Théry et al., 2008).

ALAN can also impact the reproductive success of insects directly through its various effects on development and physiology (Honnen et al., 2016). Exposure to constant light is known to sterilize males (Bebas et al., 2001; Giebultowicz et al., 1990), suppress female sex pheromones (Fatzinger, 1973; van Geffen et al., 2015a), and interfere with oviposition in moths (Nemfc, 1971; Yamaoka and Hirao, 1981) – likely a result of its disruption of the circadian timing of reproductive development or behavior. Similarly, exposure to dim ALAN decreases the fecundity of *Drosophila melanogaster* (McLay et al., 2017). Exposure to different ratios of blue or red light at night significantly alters the sex ratio of parasitoid wasps (Cochard et al., 2019a, 2019b), and may impact other insect species as well. The effective sex ratio of surviving reproductives can be further altered by the differential impacts of ALAN on behavior: for example, male tree weta avoid illuminated areas but female tree weta do not (Farnworth et al., 2018), and female winter moths (*Operophtera brumata*) avoid illuminated tree trunks (van Geffen et al., 2015b). In general, female moths tend to be less strongly attracted to artificial lights than males of the same species (Altermatt et al., 2009; Garris and Snyder, 2010; van Geffen et al., 2015b). Those that can be found at light traps are often gravid (Frank, 1988) and may be compelled to oviposit in the immediate area regardless of habitat suitability. Perhaps most dramatically, polarized light pollution frequently misleads aquatic insects into ovipositing on non-aquatic, impermeable surfaces (Szaz et al., 2015; Villalobos Jiménez and de, 2017), efficiently decimating subsequent generations.

5. Predation

Insects that become caught in the orbit of artificial lights can be readily exploited by insectivores. This may be why predatory arthropods tend to be disproportionately represented in illuminated habitats (Davies et al., 2017, 2012; Eccard et al., 2018; Manfrin et al., 2017), just as insectivorous bats (Jung and Kalko, 2010; Minnaar et al., 2015; Russo et al., 2019; Rydell, 2006), rats (Yoon et al., 2010), shorebirds (Dwyer et al., 2013), geckos (Zozaya et al., 2015) and cane toads (González-Bernal et al., 2016) are often found feeding around artificial lights. Orb-web spiders prefer to build their webs near artificial lights, where they net more prey (Czaczkes et al., 2018; Heiling, 1999; Yuen and Bonebrake, 2017). Diurnal predators such as jumping spiders (Frank, 2009; Wolff, 1982) and anoles (Garber, 1978) have also been described hunting for insects at lights at night (Manfrin et al., 2018), while birds are known to feed on aquatic insects trapped by polarized light pollution (Robertson et al., 2010). In general, prey insects do not appear able to defend against the increased predation pressure. To the contrary, a wide variety of moth species willingly approach streetlights monitored by foraging bats (Acharya and Fenton, 1999), where they are less able to execute their normal evasive flight behavior (Minnaar et al., 2015; Svensson and Rydell, 1998).

Predators do not only benefit from the dense aggregation of insect prey under artificial lights, but also the increased visibility, which is thought to benefit visually oriented vertebrate insectivores including some birds (Dwyer et al., 2013; Santos et al., 2010) and fish (Meyer and Sullivan, 2013). Other invertebrate predators may also benefit: pea aphids are more frequently predated by visually oriented lady beetles (*Coccinella septempunctata*) under ALAN, but not by lady beetles that use non-visual cues to hunt (Miller et al., 2017). When light levels are too bright, however, some predatory and parasitoid insects themselves succumb to its suppressive effects on foraging behavior (Eccard et al., 2018; Sanders et al., 2018, 2015). Finally, alterations to the intensity

Exhibit B- Public Comment to PC

and spectra of the nocturnal light environment can interfere with visual signals, which play an important role the predator-prey arms race. The aposematic glows of larval fireflies (Branham and Wenzel, 2003; Leavell et al., 2018) and the aposematic coloration of *Heliconius* butterflies (Seymoure, 2016) are likely to become less apparent under ALAN, as these and other warning signals have evolved to maximize visibility within particular natural light environments. Camouflage has also evolved within environments illuminated solely by natural sources (Davies et al., 2013a; Delhey and Peters, 2017), and could become ineffectual when viewed under ALAN. In some cases, intelligent predators given the opportunity to observe insects perched beneath artificial lights may become better at recognizing them in natural light environments (Frank, 2006). Whenever evolutionary traps increase predation risk in this way, they are likely to cause the rapid extinction of affected species (Kokko and Sutherland, 2001; Robertson et al., 2018).

6. Development

Artificial light at night can interfere with the development of immature insects by directly inhibiting or promoting nocturnal or diurnal foraging activity (see **Foraging**), or by interfering with the production of a suite of endocrine hormones (Ouyang et al., 2018; Russart and Nelson, 2018a) and the processes that they regulate, including circadian rhythms (Aulsebrook et al., 2018; Dominoni et al., 2016) and metabolic function (Gaston et al., 2017; Marcheva et al., 2013). One insect hormone particularly affected by environmental light – especially short wavelength light (Aubé et al., 2013; Lampel et al., 2005) – is melatonin. Melatonin is an active antioxidant (Durrant et al., 2019; Jones et al., 2015; Tan et al., 2010) and key biological signal (Hardeland and Poeggeler, 2003), which is primarily produced in darkness and suppressed by blue light. Its daily oscillation helps to regulate circadian rhythms of activity as well as circannual photoperiodism (Desouhant et al., 2019; Evans et al., 2007; Tan et al., 2010).

Previous research into the circadian rhythms of insects has used regimens of constant darkness or light to elucidate the fitness costs of total arrhythmicity (Winfree, 1974), which include impaired immune function, reduced fecundity, and a shorter lifespan (Durrant et al., 2015; Kouser and Palaksha Shakunthala, 2014). Other subtler fitness costs may arise from the mistiming of crucial life history events. For example, many insect species synchronize certain developmental activities with particular times of day: for example, *Drosophila jambulina* fruit flies eclose before dawn when ambient temperature and humidity are optimal (Thakurdas et al., 2009), while intertidal midges (*Pontomyia oceana* and *Clunio* spp.) eclose during periods of low tide (Neumann, 1989; Soong et al., 2011); improper timing could cause fruit flies to desiccate and intertidal midges to drown.

Artificially lengthened photoperiods delay the development of insects that overwinter as juveniles, including locusts (*Locusta migratoria;* Tanaka et al., 1993) and thrips (*Megalurothrips sjostedti;* Ekesi et al., 1999), while accelerating the development of multivoltine lady beetles (*Coelophora saucia*; Omkar and Pathak, 2006), aphids (*Megoura viciae;* Kehoe et al., 2018) and flower bugs (*Orius sauteri;* Wang et al., 2013). By effectively lengthening photoperiod, and potentially suppressing melatonin production, ALAN prolongs juvenile development in black field crickets (*Teleogryllus commodus;* Durrant et al., 2018), but accelerates development in orb-web spiders (*Eriophora biapicata;* Willmott et al., 2018). Short-wavelength light speeds up the pupal development of cabbage moths (*Mamestra brassicae;* van Geffen et al., 2014), while red light has no effect. ALAN also causes aphids that exhibit seasonal polyphenism to maintain their summer form well into autumn (Sanders et al., 2015), and horse-chestnut leafminers (*Cameraria ohridella*) to undergo more generations per season (Schroer et al. 2019); both of these changes likely lead to cold stress. Whether ALAN slows or speeds development in a certain species is ultimately immaterial: whenever insects are desynchronized from their external climate, conspecifics, host plants, food sources, *etc.*, the survival, reproduction and general fitness consequences are catastrophic (Boggs and Inouye, 2012; Bosch et al., 2010; Buckley et al., 2017; Conrad et al., 2003; Konvička et al., 2016; Kudo and Ida, 2013; Miller-Rushing et al., 2010; Schenk et al., 2018).

7. Recommendations

We still have yet to fully understand how diverse insect taxa respond to artificial light of varying spectral composition, intensity, polarization, and flicker. To make matters more complicated, old fashioned bulb types often release large amounts of heat (Elvidge et al., 2010), while some modern LED fixtures emit ultrasonic frequencies that could have compounding effects on insect fitness (John Swaddle, *pers. comm.*). A combination of insect electroretinography and thoughtfully controlled behavioral studies (Cronin et al., 2014) may reveal ways of reducing the ecological consequences of ALAN on insects while still maintaining sufficient levels of nighttime illumination for human safety and enjoyment. In general, efforts to mitigate ALAN driven declines in insect diversity and biomass should take a spectral, spatial, and temporal approach (Bruce-White and Shardlow, 2011).

Monochromatic LEDs can be engineered to produce light of any desired spectral composition (Pimputkar et al., 2009). Therefore, once we know the specific wavelength affinities of insects, we can in theory design lights with minimal output in the wavelengths that most affect insect fitness. Many insects are capable of perceiving ultraviolet wavelengths, but are fairly insensitive to red, deep red, and infrared (Briscoe and Chittka, 2001; Lind et al., 2017). Long wavelength light (amber or red) tends to induce relatively low levels of flight-to-light behavior across insect groups (Donners et al., 2018; Longcore et al., 2018; Seymoure et al., 2019; Spoelstra et al., 2015), and has the least suppressive effect on melatonin production (Dauchy et al., 2016; Do et al., 2009; Russart and Nelson, 2018b), which may reduce impacts on insect physiology and development (Desouhant et al., 2019; Do et al., 2009; Jones et al., 2015; Russart and Nelson, 2018b; Saunders, 2012). However, the spectral needs of certain insect (Bek, 2015; Pacheco et al., 2016; Spoelstra et al., 2015; van Langevelde et al., 2017) and non-insect taxa such as plants, fish, and birds (Bennie et al., 2016; Dominoni, 2015; Seymoure et al., 2019) do not always align. Furthermore, many monochromatic LED fixtures on the market today are so bright, with such a broad full width at half maximum (FWHM, a measure of the proportion of photons emitted on either side of the peak wavelength), that their color as stated is not particularly relevant.

In many cases, it is far easier, quicker, and cheaper to shield, dim, or turn off a light source than it is to find the particular bulb type or narrow bandpass filter that makes its emissions visible to humans alone. Spatial mitigation of ALAN must involve the installation of proper shielding, but shielding alone is insufficient: it may block glare at human eye level and reduce atmospheric skyglow, but it will not prevent downwelling light from affecting insects in the immediate habitat; stationary insects, including pond-dwelling aquatic species and most female fireflies, may be completely incapacitated by a perfectly shielded streetlight. Rather than focusing overly much on shielding, insect conservation efforts should instead be directed towards the following methods of spatial mitigation: limiting illumination to desired areas such as sidewalks or roads; dimming light sources to the lowest acceptable intensity; and—perhaps most importantly—reducing the number of fixtures installed in and around ecologically vulnerable areas. In ecotourist hotspots, path lights might be shielded from the top *and* the bottom to minimize their impact on nearby biodiversity. Increased understanding of how insects are affected by "invisible" qualities of light including polarization (Egri et al., 2017; Száz et al., 2016) and flicker rate (Barroso et al., 2017; Inger et al., 2014; Shields, 1989) can further inform the design of low-impact fixtures as well as their surrounding surfaces. Finally, temporal approaches comprising motion activation and/or automatic timers that extinguish lights when they are not needed, or when vulnerable species are likely to be most

Exhibit B- Public Comment to PC

affected (*e.g.* during the two month long courtship season of the common glow-worm; (Gardiner, 2011), can greatly improve insect survivorship.

8. Conclusion

Some estimates predict that one million species, including up to 40% of insects, will go extinct within the next several decades (IPBES, 2019; Sánchez-Bayo and Wyckhuys, 2019). It is urgent therefore that we seek to identify the range of threats that insects face, and understand how to best address them. In light of the evidence presented above, we strongly believe that ALAN—in combination with habitat loss, chemical pollution, invasive species, and climate change—is driving insect declines. The relative lack of research into its ecological impact is likely a reflection of diurnal bias (Gaston, 2019), and not due to an inherent lack of importance. Quite the contrary: light is the source of all life on this planet, a fundamental part of the perceptive ability of most animal taxa, and an environmental cue of time of day and year that has been constant throughout all of evolutionary history. Anthropogenic changes to the natural light environment should be predicted to affect all life that has evolved within it—that is to say, almost all life on Earth.

In this paper we have summarized numerous studies demonstrating the ways in which ALAN impacts nocturnal and diurnal insects through effects on movement, foraging, reproduction, predation risk, and development. We would like to emphasize that ALAN is not merely a subcategory of urbanization: the ecological consequences of light pollution are not limited to urban and suburban centers, but widespread along roadways and around protected areas. Although there is obviously no single cause of insect declines, each threat identified is an opportunity for better informed management practices. Furthermore, unlike other potential drivers of insect declines, ALAN is relatively straightforward to reverse, and doing so could greatly reduce insect losses immediately. Our aim in sharing our perspective is thus to urge policy makers and land managers to incorporate the known consequences of ALAN into their insect conservation agendas. Meanwhile, more research is needed to further document the role of ALAN in insect declines, as well as to engineer more insect friendly lighting technology.

Declaration of Competing Interest

The authors have no conflicts of interest to declare. Furthermore, this manuscript has not been submitted to any other journals.
